Brzeziny, Poland, 1939 Zofia's comfortable lifestyle overturns when her husband, Jabez, who monitors Nazi activity, has gone missing. Rather than fleeing the country with her young son, as she had promised Jabez who is fearing retaliation, she decides to stay. She cannot possibly leave her friend, Aanya. Since their childhood they have amazed fellow Brzeziners that it does not matter that Aanya is Jewish and deaf, and that Zofia is Catholic and hearing. Now, more than ever with war looming, Zofia will do whatever is necessary to protect her family and Aanya. As both love and war approach their Polish town, Zofia and Aanya must make choices that will change the meaning of family, home, and their precious friendship. The journey, decisions and the no-going-back consequences the women face will either help them to survive-or not-as Hitler's Third Reich revs up its control of the world.

Ireland in an Imperial World - Timothy G. McMahon 2017-03-20

Ireland in an Imperial World interrogates the myriad ways through which Irish men and women experienced, participated in, and challenged empires in the nineteenth and twentieth centuries. Most importantly, they were integral players simultaneously managing and undermining the British Empire, and through their diasporic communities, they built sophisticated arguments that aided challenges to other imperial projects. In emphasizing the interconnections between Ireland and the wider British and Irish worlds, this book argues that a greater appreciation of empire is essential for enriching our understanding of the development of Irish society at home. Moreover, these thirteen essays argue plainly that Ireland was on the cutting edge of broader global developments, both in configuring and dismantling Europe's overseas empires.

Sol-Gel Materials for Energy, Environment and Electronic Applications - Suresh C.

Pillai 2017-02-16

Taking an integrated approach, expert chapters present a wide range of topics, from photocatalysts, solar cells and optics, to thin films and materials for energy storage and conversion, demonstrating the combined use of chemistry, physics, materials science and engineering in the search for solutions to some of the most challenging problems of our time.

Spectral Computed Tomography - Björn J. Heismann 2012

Computed tomography (CT) is a widely used x-ray scanning technique. In its prominent use as a medical imaging device, CT serves as a workhorse in many clinical settings throughout the world. It provides answers to urgent diagnostic tasks such as oncology tumor staging, acute stroke analysis, or radiation therapy planning. Spectral Computed Tomography provides a concise, practical coverage of this important medical tool. The first chapter considers the main clinical motivations for spectral CT applications. In Chapter 2, the measurement properties of spectral CT systems are described. Chapter 3 provides an overview of the current state of research on spectral CT algorithms. Based on this overview, the technical realization of spectral CT systems is evaluated in Chapter 4. Device approaches such as DSCT, kV switching, and energy-resolving detectors are compared. Finally, Chapter 5 summarizes various algorithms for spectral CT reconstructions and spectral CT image postprocessing, and links these algorithms to clinical use cases

Social Entrepreneurship and Corporate Social Responsibility - Joan Marques 2020-07-05

This book provides professionals, as well as students, with the understanding that Social Entrepreneurship and Corporate Social Responsibility (CSR) are now core business principles for sustainably. It encourages social entrepreneurs in their role as forerunners, in creating new business models that develop, facilitate or implement constructive solutions to social, cultural and environmental issues. At the same time, this book views corporate social responsibility as a means of challenging existing entities to realize and modify prior unsustainable and predatory business models; and to increase social, cultural and environmental accountability. By linking these two concepts, this book prompts a paradigmatic awakening, whereby the foundational driver of business creation and management no longer rests on profit maximization, but on improvement of the quality of life for society.

Drug Utilization Research - Monique Elseviers 2016-05-31

Drug Utilization Research (DUR) is an eclectic scientific discipline, integrating descriptive and analytical methods for the quantification, understanding and evaluation of the processes of prescribing, dispensing and consumption of medicines and for the testing of interventions to enhance the quality of these processes. The discipline is closely related and linked mainly to the broader field of pharmacoepidemiology, but also to health outcomes research, pharmacovigilance and health economics. Drug Utilization Research is a unique,

practical guide to the assessment and evaluation of prescribing practices and to interventions to improve the use of medicines in populations. Edited by an international expert team from the International Society for Pharmacoepidemiology (ISPE), DUR is the only title to cover both the methodology and applications of drug utilization research and covers areas such as health policy, specific populations, therapeutics and adherence.

The Christie Affair - Nina de Gramont 2022-02-23

"Nina de Gramont's *The Christie Affair* is a beguiling novel of star-crossed lovers, heartbreak, revenge, and murder-and a brilliant re-imagining of one of the most talked-about unsolved mysteries of the twentieth century. Every story has its secrets. Every mystery has its motives. 'A long time ago, in another country, I nearly killed a woman. It's a particular feeling, the urge to murder. It takes over your body so completely, it's like a divine force, grabbing hold of your will, your limbs, your psyche. There's a joy to it. In retrospect, it's frightening, but I daresay in the moment it feels sweet. The way justice feels sweet.' The greatest mystery wasn't Agatha Christie's disappearance in those eleven infamous days, it's what she discovered. London, 1925: In a world of townhomes and tennis matches, socialites and shooting parties, Miss Nan O'Dea became Archie Christie's mistress, luring him away from his devoted and well-known wife, Agatha Christie. The question is, why? Why destroy another woman's marriage, why hatch a plot years in the making, and why murder? How was Nan O'Dea so intricately tied to those eleven mysterious days that Agatha Christie went missing?"--

Virulent Zones - Lyle Fearnley 2020-10-23

Scientists have identified southern China as a likely epicenter for viral pandemics, a place where new viruses emerge out of intensively farmed landscapes and human--animal interactions. In *Virulent Zones*, Lyle Fearnley documents the global plans to stop the next influenza pandemic at its source, accompanying virologists and veterinarians as they track lethal viruses to China's largest freshwater lake, Poyang Lake. Revealing how scientific research and expert agency operate outside the laboratory, he shows that the search for origins is less a linear process of discovery than a constant displacement toward new questions about cause and context. As scientists strive to understand the environments from which the influenza virus emerges, the unexpected scale of duck farming systems and unusual practices such as breeding wild geese unsettle research objects, push scientific inquiry in new directions, and throw expert authority into question. Drawing on fieldwork with global health scientists, state-employed veterinarians, and poultry farmers in Beijing and at Poyang Lake, Fearnley situates the production of ecological facts about disease emergence inside the shifting cultural landscapes of agrarian change and the geopolitics of global health.

Geriatric Hip Fractures - Nicholas C. Danford 2021-08-08

The global burden of geriatric hip fractures is enormous. From both the patient's and physician's perspective, the injury is complex. A hip fracture often changes a patient's life and/or the life of the patient's family permanently. From the physician's perspective, care of geriatric hip fracture patients requires a multidisciplinary team, which is led by the surgeon and which includes internists and other subspecialists within internal medicine, anesthesiologists, nurses, operating room technicians, social workers, physical therapists, and rehabilitation center coordinators and staff. Nowhere in the orthopedic literature is there a text that guides care for these complex patients from injury through recovery. This text is the first to do so by organizing and synthesizing a large body of literature. Its main themes include pre-operative, operative, and post-operative care of the patient who sustains a geriatric hip fracture. Its main objective is to organize the current body of literature into a cohesive whole so that the busy orthopedic surgeon does not have to undertake a literature search each time he or she wants an answer to the myriad questions that characterize a patient's injury, treatment, and recovery course. With regard to pedagogy, because orthopedic surgeons in training will utilize this book, and because the case study is the central pedagogical tool in the field of orthopedic surgery, this book includes case studies within each chapter, with the author's preferred treatment and decision-making rationale for each case. Selected video supplements reinforce real-world application of knowledge. Practicing orthopedic surgeons, as well as orthopedic residents and fellows in training, will find *Geriatric Hip Fractures: A Practical Approach* a highly useful and informative resource.

Urban Air Pollution in Asian Cities - Dieter Schwela 2012-05-16

Air pollution has become part of the daily existence of many people who work, live and use the streets in Asian cities. Each day millions of city dwellers breathe air polluted with concentrations of chemicals, smoke and particles that dramatically exceed World Health Organization guideline values. Deteriorating air quality has resulted in significant impacts on human health and environment in Asia. This book provides a comprehensive and comparative assessment of the current status and challenges in urban air pollution management in 20 cities in the Asian region. It examines the effects on human health and the environment and future implications for planning, transport and energy sectors. National and local governments have begun to develop air quality management strategies to address the deterioration in urban air quality; however, the scope and effectiveness of such strategies vary widely. This book benchmarks these air quality management strategies, examines successes and failures in these cities and presents strategies for improving air quality management in cities across Asia and the rest of our rapidly urbanizing world. Information on air quality in Asia is clearly presented with easy-to-read city profiles, tables and graphs. This is an essential resource for all those concerned with urban air quality management, not just in Asia but in cities across our rapidly urbanizing world. Cities covered Bangkok, Beijing, Busan, Colombo, Dhaka, Hanoi, Ho Chi Minh City, Hong Kong, Jakarta, Kathmandu, Kolkata, Metro Manila, Mumbai, New Delhi, Seoul, Shanghai, Singapore, Surabaya, Taipei and Tokyo

Sol-Gel Materials - John D. Wright 2018-10-03

Sol-Gel processing methods, first used historically for decorative and constructional materials, were extensively developed in the last century for applications such as glasses, ceramics, catalysts, coatings, composites and fibres. Today they are reaching their full potential, enabling the preparation of new generations of advanced materials not easily accessible by other methods yet using mild, low-energy conditions. The topic is therefore increasingly included in advanced undergraduate, MSc and PhD programmes in the areas of chemistry, physics and materials science. This concise introductory text, written at the advanced undergraduate/first-year postgraduate level, is also suitable as an introduction to the development, mechanisms, chemistry, characterisation methods and applications of the technique. It provides readers with an extensive yet concise grounding in the theory of each area of the subject and details the real and potential applications and the future prospects of sol-gel chemistry.

Love, Theodosia - Lori Anne Goldstein 2021-11-02

A Romeo & Juliet tale for Hamilton! fans. In post-American Revolution New York City, Theodosia Burr, a scholar with the skills of a socialite, is all about charming the right people on behalf of her father—Senator Aaron Burr, who is determined to win the office of president in the pivotal election of 1800. Meanwhile, Philip Hamilton, the rakish son of Alexander Hamilton, is all about being charming on behalf of his libido. When the two first meet, it seems the ongoing feud between their politically opposed fathers may be hereditary. But soon, Theodosia and Philip must choose between love and family, desire and loyalty, and preserving the legacy their flawed fathers fought for or creating their own. Love, Theodosia is a smart, funny, swoony take on a fiercely intelligent woman with feminist ideas ahead of her time who has long-deserved center stage. A refreshing spin on the Hamiltonian era and the characters we have grown to know and love. It's also a heartbreaking romance of two star-crossed lovers, an achingly bittersweet "what if." Despite their fathers' bitter rivalry, Theodosia and Philip are drawn to each other and, in what unrolls like a Jane Austen novel of manners, we find ourselves entangled in the world of Hamilton and Burr once again as these heirs of famous enemies are driven together despite every reason not to be.
