Inner Speech - Peter Langland-Hassan 2018-10-18

Inner speech lies at the chaotic intersection of several difficult questions in contemporary philosophy and psychology. On the one hand, these episodes are private mental events. On the other, they resemble speech acts of the sort used in interpersonal communication. Inner speech episodes seem to constitute or express sophisticated trains of conceptual thought but, at the same time, they are motoric in nature and draw on

sensorimotor mechanisms for speech production and perception more generally. By using inner speech, we seem to both regulate our bodily actions and gain a unique kind of access to our own beliefs and desires. Inner Speech: New Voices explores this familiar and yet mysterious element of our daily lives, bringing together contributions from leading philosophers, psychologists, and neuroscientists. In response to renewed interest in the general connections between thought, language, and

consciousness, these leading thinkers develop a number of important new theories, raise questions about the nature of inner speech and its cognitive functions, and debate the current controversies surrounding the 'little voice in the head.'

Depression, Emotion and the Self - Matthew Ratcliffe
2014-07-15

This volume addresses the question of what it is like to be depressed. Despite the vast amount of research that has been conducted into the causes and treatment of depression, the experience of depression remains poorly understood. Indeed, many depression memoirs state that the experience is impossible for others to understand. However, it is at least clear that changes in emotion, mood, and bodily feeling are central to all forms of depression, and these are the book's principal focus. In recent years, there has been a great deal of valuable philosophical and interdisciplinary research on the emotions, complemented by new developments in philosophy of psychiatry and scientifically-informed phenomenology. The book draws on all these areas, in order to offer a range of novel insights into the nature of depression experiences. To do so, it brings together a distinguished group of philosophers, psychiatrists, anthropologists, clinical psychologists and neuroscientists, all of whom have made important contributions to current research on emotion and/or psychiatric illness.

Human Dignity of the Vulnerable in the Age of Rights -
Aniceto Masferrer 2016-08-26

This volume is devoted to exploring a subject which, on the surface, might appear to be just a trending topic. In fact, it is much more than a trend. It relates to an ancient, permanent issue which directly connects with

people's life and basic needs: the recognition and protection of individuals' dignity, in particular the inherent worthiness of the most vulnerable human beings. The content of this book is described well enough by its title: 'Human Dignity of the Vulnerable in the Age of Rights'. Certainly, we do not claim that only the human dignity of vulnerable people should be recognized and protected. We rather argue that, since vulnerability is part of the human condition, human vulnerability is not at odds with human dignity. To put it simply, human dignity is compatible with vulnerability. A concept of human dignity which discards or denies the dignity of the vulnerable and weak is at odds with the real human condition. Even those individuals who might seem more skilled and talented are fragile, vulnerable and limited. We need to realize that human condition is not limitless. It is crucial to re-discover a sense of moderation regarding ourselves, a sense of reality concerning our own nature. Some lines of thought take the opposite view. It is sometimes argued that humankind is – or is called to be – powerful, and that the time will come when there will be no vulnerability, no fragility, no limits at all. Human beings will become like God (or what believers might think God to be). This perspective rejects human vulnerability as an intrinsic evil. Those who are frail or weak, who are not autonomous or not able to care for themselves, do not possess dignity. In this volume it is claimed that vulnerability is an inherent part of human condition, and because human dignity belongs to all individuals, laws are called to recognize and protect the rights of all of them, particularly of those who might appear to be more vulnerable and fragile.

Delusions and Other Irrational Beliefs - Lisa Bortolotti

2010

The book is an interdisciplinary exploration of the nature of delusions. It brings together recent work in philosophy of mind, cognitive psychology and psychiatry, offering a comprehensive review of the philosophical issues raised by the psychology of normal and abnormal cognition.

Daydreams and the Function of Fantasy - M. Regis

2013-09-19

This book seeks to re-define the role of fantasy in human life by overturning mainstream psychology's understanding of daydreams as being task-distracted mind wandering by proposing that all waking fantasies function to transform mood states into specific emotional reactions.

Philosophy of Psychiatry - Sam Wilkinson 2022-11-14

This is the first introductory textbook of its kind devoted to philosophy of psychiatry, offering a thorough and accessible investigation of the conceptual and philosophical problems at the heart of psychiatric practice and research. While it applies some of the long-standing concerns of philosophy to the mental health professions, it also investigates philosophical problems and issues that have arisen more recently from careful examination of psychiatric phenomena. Divided into two parts, Philosophy of Psychiatric Practice and Research and Philosophy and Psychopathology, the book's 12 chapters cover topics like the ontological status of mental illness, philosophical issues in diagnosis, the role of culture in psychiatry and the relationship between mental illness and personal identity, as well as explore foundational problems in studying well-known psychopathologies like schizophrenia, depression and addiction. All chapters include initial overviews and

concluding summaries and a list of suggested readings. Key Features Two-part structure – divided between (1) philosophy of psychiatric practice and research, and (2) philosophy and psychopathology – presents a clear, yet distinctive picture of the field Offers a unified style and vision throughout, with easy-to-follow segues from chapter to chapter Pedagogical features include chapter overviews and summaries, discussion questions and sections for further reading

The Routledge Handbook of Philosophy of Imagination - Amy Kind 2016-01-22

Imagination occupies a central place in philosophy, going back to Aristotle. However, following a period of relative neglect there has been an explosion of interest in imagination in the past two decades as philosophers examine the role of imagination in debates about the mind and cognition, aesthetics and ethics, as well as epistemology, science and mathematics. This outstanding Handbook contains over thirty specially commissioned chapters by leading philosophers organised into six clear sections examining the most important aspects of the philosophy of imagination, including: Imagination in historical context: Aristotle, Descartes, Hume, Kant, Husserl, and Sartre What is imagination? The relation between imagination and mental imagery; imagination contrasted with perception, memory, and dreaming Imagination in aesthetics: imagination and our engagement with music, art, and fiction; the problems of fictional emotions and 'imaginative resistance' Imagination in philosophy of mind and cognitive science: imagination and creativity, the self, action, child development, and animal cognition Imagination in ethics and political philosophy, including the concept of 'moral imagination' and empathy Imagination in

epistemology and philosophy of science, including learning, thought experiments, scientific modelling, and mathematics. The Routledge Handbook of Philosophy of Imagination is essential reading for students and researchers in philosophy of mind and psychology, aesthetics, and ethics. It will also be a valuable resource for those in related disciplines such as psychology and art.

Pathologies of Belief - Max Coltheart 2000

Belief systems are supposed to be governed by norms of rationality. Yet some people seem to believe quite extraordinary things: for example, that they are dead, or that their closest relatives have been replaced by impostors, or that the person they see in the mirror is not really them, or that someone else's thoughts are being inserted into their mind. Do people really believe such things? Could beliefs like these simply be rational interpretations of unusual experiences? Why are these beliefs maintained despite their utter implausibility and the uniform skepticism with which others greet them? In this book, psychologists and philosophers describe and discuss a range of case studies of delusional beliefs, drawing out general lessons both for the cognitive architecture of the mind and for the notion of rationality, and exploring connections between the delusional beliefs that occur in schizophrenia and the flawed understanding of beliefs that is characteristic of autism.

Handbook of the Philosophy of Medicine - Thomas Schramme 2017-02-14

This is the first wide-ranging, multi-authored handbook in the field of philosophy of medicine, covering the underlying conceptual issues of many important social, political and ethical issues in health care. It

introduces and develops over 70 topics, concepts, and issues in the field. It is written by distinguished specialists from multiple disciplines, including philosophy, health sciences, nursing, sociology, political theory, and medicine. Many difficult social and ethical issues in health care are based on conceptual problems, most prominently on the definitions of health and disease, or on epistemological issues regarding causality or diagnosis. Philosophy is the discipline that deals with such conceptual, metaphysical, epistemological, methodological, and axiological matters. This handbook covers all the central concepts in medicine, such as ageing, death, disease, mental disorder, and well-being. It is an invaluable source for laypeople, academics with an interest in medicine, and health care specialists who want to be informed and up to date with the relevant discussions. The text also advances these debates and will set the agenda for years to come.

Psychiatry as Cognitive Neuroscience - Matthew Broome 2009-05-14

'Psychiatry as Cognitive Neuroscience' is a philosophical analysis of the study of psychopathology, considering how cognitive neuroscience has been applied in psychiatry. The text examines many neuroscientific methods, such as neuroimaging, and a variety of psychiatric disorders, including depression, and schizophrenia.

Critical Discourse Analysis - G. Weiss 2007-10-18

Can discourse analysis techniques adequately deal with complex social phenomena? What does 'interdisciplinarity' mean for theory building and the practise of empirical research? This original volume debates critical theory and discourse analysis,

focussing on the extent to which CDA can draw on a range of disciplines in the social sciences.

Handbook of Phenomenological Aesthetics - Hans Rainer Sepp 2010-03-11

Historically, phenomenology began in Edmund Husserl's theory of mathematics and logic, went on to focus for him on transcendental philosophy and for others on metaphysics, philosophical anthropology, and theory of interpretation. The continuing focus has thus been on knowledge and being. But if one began without those interests and with an understanding of the phenomenological style of approach, one might well see that art and aesthetics make up the most natural field to be approached phenomenologically. Contributions to this field have continually been made in the phenomenological tradition from very early on, but, so to speak, along the side. (The situation has been similar with phenomenological ethics.) A great deal of thought about art and aesthetics has nevertheless accumulated during a century and a handbook like the present one is long overdue. The project of this handbook began in conversations over dinner in Sepp's apartment in Baden-Baden at one evening of the hot European summer in the year 2003. As things worked out, he knew more about whom to ask and how much space to allocate to each entry and Embree knew more about how to conduct the inviting, preliminary editing, and prodding of contributors who were late returning their criticized drafts and copyedited entries and was able to invest the time and other resources from his endowed chair. That process took longer than anticipated and there were additional unfortunate delays due to factors beyond the editors's control.

Equality Before the Law Bench Book - Linda Daniele 2006

The Dark Triad of Personality - Minna Lyons 2019-01-11
The Dark Triad of Personality: Narcissism, Machiavellianism, and Psychopathy in Everyday Life summarizes the latest research on how these personality traits (psychopathology, narcissism, Machiavellianism) are defined and displayed, while also exploring the impact they have on individuals and society, the relationship between clinical conditions and personality traits, and their adaptivity. The book introduces the Dark Triad through the lens of existing clinical and personality literature, discussing shared and unique cognitive and empathetic profiles associated with each trait. Antisocial, antagonistic, and criminal behaviors associated with the Dark Triad are also covered, as is the way these individuals compete socially and in the workplace. Reviews the development, measurement and evolutionary origins of these traits Explores how these traits may be adaptive Assesses the relationship between clinical conditions and Dark Triad personality traits Includes sections on manipulation, competition and cooperation

The Naturalness of Religious Ideas - Pascal Boyer 1994-02-03

Why do people have religious ideas? And why those religious ideas? The main theme of Pascal Boyer's work is that important aspects of religious representations are constrained by universal properties of the human mind-brain. Experimental results from developmental psychology, he says, can explain why certain religious representations are more likely to be acquired, stored, and transmitted by human minds. Considering these universal constraints, Boyer proposes an exciting new answer to the question of why similar religious representations are found in so many different

cultures. His work will be widely discussed by cultural anthropologists, psychologists, and students of religion, history, and philosophy.

Applying Wisdom to Contemporary World Problems - Robert J. Sternberg 2019-07-03

This book presents perspectives from world experts in the field of wisdom studies to propose how wisdom can provide the foundation upon which solutions to social and global problems can be grounded. The authors argue that where society has come to rely on leaders with skills relating to knowledge and intelligence; instead we should focus on wisdom-based acumen for our leaders in government, business, and the military. In this book the authors offer evidence-based definitions of wisdom and apply these to world problems they believe could potentially be solved using wise solutions. Among the case studies confronted are terrorism and war, poverty and economic disparity, climate change, increasing antibiotic resistance and political corruption. Focusing on the cognitive, social and emotional processes involved in everyday decision-making, this book presents a compelling argument for the application of wise problem-solving to complex world issues that will appeal in particular to those in leadership, teaching and policy roles, and open new pathways in the fields of wisdom-studies, psychology, sociology and political theory.

Contemporary Debates in Philosophy of Mind - Brian P. McLaughlin 2023-03-20

A timely collection of debates concerning the major themes and topics in philosophy of mind, fully updated with new topics covering the latest developments in the field Contemporary Debates in Philosophy of Mind provides a lively and engaging introduction to the

conceptual background, ongoing debates, and contentious issues in the field today. Original essays by more than 30 of the discipline's most influential thinkers offer opposing perspectives on a series of contested questions regarding mental content, physicalism, the place of consciousness in the physical world, and the nature of perception and mental capacities. Written to appeal to non-specialists and professional philosophers alike, the second edition of Contemporary Debates in Philosophy of Mind features five entirely new debates on the relation between perception and cognition, whether pain is a natural kind, whether perception is best understood through representational content or direct contact with the world, whether we need imagination that goes beyond imagery and supposition, and whether perceptual contents are general, particular, or a hybrid. Presents 15 sets of specially commissioned essays with opposing viewpoints on central topics in philosophy of mind Offers head-to-head debates on central topics such as consciousness, intentionality, normativity, mental causation, materialism, and perception Provides a dynamic view of contemporary thinking about fundamental and controversial issues Includes a thorough introduction providing a comprehensive background to the issues explored in each debate Part of Wiley-Blackwell's acclaimed Contemporary Debates in Philosophy series, Contemporary Debates in Philosophy of Mind, Second Edition is essential reading for undergraduate and graduate students, academics, professional philosophers, and sophisticated general readers with an interest in the subject.

Tutorials in Visual Cognition - Veronika Coltheart 2011-01-07

In the late-1980s, visual cognition was a small subfield

of cognitive psychology, and the standard texts mainly discussed just iconic memory in their sections on visual cognition. In the subsequent two decades, and especially very recently, many remarkable new aspects of the processing of brief visual stimuli have been discovered -- change blindness, repetition blindness, the attentional blink, newly-discovered properties of visual short-term memory and of the face recognition system, the influence of reentrant processing on visual perception, and the surprisingly intimate relationships between eyeblinks and visual cognition. This volume provides up-to-date tutorial reviews of these many new developments in the study of visual cognition written by the leaders in the discipline, providing an incisive and comprehensive survey of research in this dynamic field.

The Really Hard Problem - Owen Flanagan 2009-02-13

A noted philosopher proposes a naturalistic (rather than supernaturalistic) way to solve the "really hard problem": how to live in a meaningful way—how to live a life that really matters—even as a finite material being living in a material world. If consciousness is "the hard problem" in mind science—explaining how the amazing private world of consciousness emerges from neuronal activity—then "the really hard problem," writes Owen Flanagan in this provocative book, is explaining how meaning is possible in the material world. How can we make sense of the magic and mystery of life naturalistically, without an appeal to the supernatural? How do we say truthful and enchanting things about being human if we accept the fact that we are finite material beings living in a material world, or, in Flanagan's description, short-lived pieces of organized cells and tissue? Flanagan's answer is both naturalistic and enchanting. We all wish to live in a meaningful way, to

live a life that really matters, to flourish, to achieve eudaimonia—to be a "happy spirit." Flanagan calls his "empirical-normative" inquiry into the nature, causes, and conditions of human flourishing eudaimonics. Eudaimonics, systematic philosophical investigation that is continuous with science, is the naturalist's response to those who say that science has robbed the world of the meaning that fantastical, wishful stories once provided. Flanagan draws on philosophy, neuroscience, evolutionary biology, and psychology, as well as on transformative mindfulness and self-cultivation practices that come from such nontheistic spiritual traditions as Buddhism, Confucianism, Aristotelianism, and Stoicism, in his quest. He gathers from these disciplines knowledge that will help us understand the nature, causes, and constituents of well-being and advance human flourishing. Eudaimonics can help us find out how to make a difference, how to contribute to the accumulation of good effects—how to live a meaningful life.

Memory - Jordi Fernández 2019

Jordi Fernández here offers a philosophical investigation of memory, one which engages with memory's philosophically puzzling characteristics in order to clarify what memory is. Memories interact with mental states of other types in a particular way, and they also have associated feelings that these other mental states lack. They are special in terms of their representational capacity too, since one can have memories of objective events as well as memories of one's own past experiences. Finally, memories are epistemically unique, in that beliefs formed on the basis of memories are protected from certain errors of misidentification, and are justified in a way which does

not rely on any cognitive capacity other than memory. To explain these unique features, Fernández proposes that memories have a particular functional role which involves past perceptual experiences and beliefs about the past. He suggests that memories have a particular content as well, namely that they represent themselves as having a certain causal origin. Fernández then explains the feelings associated with our memories as the experience of some of the things that our memories represent, things such as our own past experiences, or the fact that memories originate in those experiences. He also accounts for the special justification for belief afforded by our memories in terms of the content that memories have. The resulting picture is a unified account of several philosophically interesting aspects of memory, one that will appeal to philosophers of mind, metaphysicians, and epistemologists alike.

Logics of Delusion - Remo Bodei 2006

Merleau-Ponty and the Ethics of Intersubjectivity - Anya Daly 2016-05-31

This book draws on Merleau-Ponty's phenomenology, psychology, neuroscience and Buddhist philosophy to explicate Merleau-Ponty's unwritten ethics. Daly contends that though Merleau-Ponty never developed an ethics per se, there is significant textual evidence that clearly indicates he had the intention to do so. This book highlights the explicit references to ethics that he offers and proposes that these, allied to his ontological commitments, provide the basis for the development of an ethics. In this work Daly shows how Merleau-Ponty's relational ontology, in which the interdependence of self, other and world is affirmed, offers an entirely new approach to ethics. In contrast

to the 'top-down' ethics of norms, obligations and prescriptions, Daly maintains that Merleau-Ponty's ethics is a 'bottom-up' ethics which depends on direct insight into our own intersubjective natures, the 'I' within the 'we' and the 'we' within the 'I'; insight into the real nature of our relation to others and the particularities of the given situation. Merleau-Ponty and the Ethics of Intersubjectivity is an important contribution to the scholarship on the later Merleau-Ponty which will be of interest to graduate students and scholars. Daly offers informed readings of Merleau-Ponty's texts and the overall approach is both scholarly and innovative.

Encountering Buddhism - Seth Robert Segall 2012-02-01
Practicing psychologists explore the mutual impact of Buddhist teachings and psychology in their lives and practice.

Breaking the Spell - Daniel C. Dennett 2006-02-02
The New York Times bestseller – a “crystal-clear, constantly engaging” (Jared Diamond) exploration of the role that religious belief plays in our lives and our interactions. For all the thousands of books that have been written about religion, few until this one have attempted to examine it scientifically: to ask why—and how—it has shaped so many lives so strongly. Is religion a product of blind evolutionary instinct or rational choice? Is it truly the best way to live a moral life? Ranging through biology, history, and psychology, Daniel C. Dennett charts religion's evolution from “wild” folk belief to “domesticated” dogma. Not an antireligious screed but an unblinking look beneath the veil of orthodoxy, *Breaking the Spell* will be read and debated by believers and skeptics alike.

Psychology and Buddhism - Kathleen H. Dockett 2006-05-02

This book advances a serious consideration of how the goals and practices of psychology can be informed and enriched by Buddhist traditions that transcend the individual to consider the interconnectedness of all things, and the responsibility we have towards the other. Individualistic and psychotherapeutic applications of Buddhism in psychology are examined, followed by a bold step into the community arena, with consideration given to the intersection between community psychology and Buddhist approaches to empowerment, social change, and prevention.

Talking to Our Selves - John M. Doris 2015-03-19

John M. Doris presents a new account of agency and responsibility, which reconciles our understanding of ourselves as moral agents with psychological research on the unconscious mind. Much philosophical theorizing maintains that the exercise of morally responsible agency consists in judgment and behavior ordered by accurate reflection. On such theories, when human beings are able to direct their lives in the manner philosophers have dignified with the honorific 'agency', it's because they know what they're doing, and why they're doing it. This understanding is compromised by quantities of psychological research on unconscious processing, which suggests that accurate reflection is distressingly uncommon; very often behavior is ordered by surprisingly inaccurate self-awareness. Thus, if agency requires accurate reflection, people seldom exercise agency, and skepticism about agency threatens. To counter the skeptical threat, John M. Doris proposes an alternative theory that requires neither reflection nor accurate self-awareness: he identifies a dialogic form of agency where self-direction is facilitated by exchange of the rationalizations with which people

explain and justify themselves to one another. The result is a stoutly interdisciplinary theory sensitive to both what human beings are like—creatures with opaque and unruly psychologies—and what they need: an account of agency sufficient to support a practice of moral responsibility.

Language, Discourse and Social Psychology - A.

Weatherall 2007-03-28

Language and communication are central features of social behaviour. So, it is somewhat surprising that the social psychological study of this area has a relatively short history. In this book a leading group of scholars overview the history, theories and methods of the field, and showcase the latest developments in cutting-edge empirical work.

Music, Neurology, and Neuroscience: Evolution, the Musical Brain, Medical Conditions, and Therapies - 2015-03-02

Did you ever ask whether music makes people smart, why a Parkinson patient's gait is improved with marching tunes, and whether Robert Schumann was suffering from schizophrenia or Alzheimer's disease? This broad but comprehensive book deals with history and new discoveries about music and the brain. It provides a multi-disciplinary overview on music processing, its effects on brain plasticity, and the healing power of music in neurological and psychiatric disorders. In this context, the disorders the plagued famous musicians and how they affected both performance and composition are critically discussed, and music as medicine, as well as music as a potential health hazard are examined. Among the other topics covered are: how music fit into early conceptions of localization of function in the brain, the cultural roots of music in evolution, and the

important roles played by music in societies and educational systems. Topic: Music is interesting to almost everybody Orientation: This book looks at music and the brain both historically and in the light of the latest research findings Comprehensiveness: This is the largest and most comprehensive volume on "music and neurology" ever written! Quality of authors: This volume is written by a unique group of real world experts representing a variety of fields, ranging from history of science and medicine to neurology and musicology
Confabulation - William Hirstein 2009

When people confabulate, they make an ill-grounded claim that they honestly believe is true, for example recalling an event from their childhood that never actually happened. This interdisciplinary book brings together some of the leading thinkers on confabulation in neuroscience, psychiatry, psychology, & philosophy.
Child's Play - Laurence R. Goldman 2020-05-28

This innovative book finally takes seriously the need for anthropologists to produce in-depth ethnographies of children's play. In examining the subject from a cross-cultural perspective, the author argues that our understanding of the way children transform their environment to create make-believe is enhanced by viewing their creations as oral poetry. The result is a richly detailed 'thick description' of how pretence is socially mediated and linguistically constructed, how children make sense of their own play, how play relates to other imaginative genres in Huli life, and the relationship between play and cosmology. Informed by theoretical approaches in the anthropology of play, developmental and child psychology, philosophy and phenomenology and drawing on ethnographic data from Melanesia, the book analyzes the sources for imitation,

the kinds of identities and roles emulated, and the structure of collaborative make-believe talk to reveal the complex way in which children invoke their experiences of the world and re-invent them as types of virtual reality. Particular importance is placed on how the figures of the ogre and trickster are articulated. The author demonstrates that while the concept of 'imagination' has been the cornerstone of Western intellectual traditions from Plato to Postmodernism, models of child fantasy play have always intruded into such theorizing because of children's unique capacity to throw into relief our understanding of the relationship between representation and reality.

Method In Madness - Peter W. Halligan 2013-11-12
In clinical neuropsychiatry, case studies provide invaluable demonstrations of the range and types of unusual psychological states that can occur after brain damage. In the pursuit of objectivity and scientific respectability, however, many academic reports of neuropsychiatric disorders appear cold, contrived and impersonal. The essence and character of the patient's experience and behaviour is easily obscured or even lost - a fact that cannot help researchers, therapists and other practitioners to relate their conceptual knowledge to the flesh-and-blood people they meet in their professional lives. In practice, much of the actual discourse of such patients has been ignored as unworthy of scientific interest. This book describes real patients in a clear and jargon-free way. These cases should serve to reduce the discrepancy between the

formal representations of psychiatric illness in the mainstream literature and the reality of people struggling to make sense of their own predicament in everyday life.

Twelve Years A Slave (Illustrated) - Solomon Northup 2014-08-22

Twelve Years a Slave (1853) is a memoir and slave narrative by Solomon Northup, as told to and edited by David Wilson. Northup, a black man who was born free in New York, details his kidnapping in Washington, D.C. and subsequent sale into slavery. After having been kept in bondage for 12 years in Louisiana by various masters, Northup was able to write to friends and family in New York, who were in turn able to secure his release. Northup's account provides extensive details on the slave markets in Washington, D.C. and New Orleans and describes at length cotton and sugar cultivation on major plantations in Louisiana.

Handbook of Research on Technoself: Identity in a Technological Society - Luppicini, Rocci 2012-10-31

"This book provides insights to better enhance the understanding of technology's widespread intertwinement with human identity within an advancing technological society"--Provided by publisher.

On Delusion - Jennifer Radden 2010-09-13

Delusions play a fundamental role in the history of psychology, philosophy and culture, dividing not only the mad from the sane but reason from unreason. Yet the very nature and extent of delusions are poorly understood. What are delusions? How do they differ from everyday errors or mistaken beliefs? Are they scientific categories? In this superb, panoramic investigation of delusion Jennifer Radden explores these questions and more, unravelling a fascinating story that ranges from

Descartes's demon to famous first-hand accounts of delusion, such as Daniel Schreber's *Memoirs of My Nervous Illness*. Radden places delusion in both a clinical and cultural context and explores a fascinating range of themes: delusions as both individually and collectively held, including the phenomenon of *folies à deux*; spiritual and religious delusions, in particular what distinguishes normal religious belief from delusions with religious themes; how we assess those suffering from delusion from a moral standpoint; and how we are to interpret violent actions when they are the result of delusional thinking. As well as more common delusions, such as those of grandeur, she also discusses some of the most interesting and perplexing forms of clinical delusion, such as Cotard and Capgras.

Psychology and Adult Learning - Mark Tennant 2007-05-07
The third edition of this popular book examines the role of psychology in informing adult education practice and has been fully updated to reflect the effect of changes in the structure of society, globalisation, technology and the impact of postmodernism. It explores the traditions of key psychological theories and discusses issues and problems in applying them to an understanding of adult learning and development. It also examines the formation of identities and places increased emphasis on what it means to be a lifelong learner. Dealing with adult learning in a variety of contexts, the topics considered include: humanistic psychology self directed learners psychoanalytic approaches the formation of identities development of intelligence learning styles behaviourism group dynamics and group facilitators critical awareness.

Preaching about Racism - Carolyn B. Helsel 2018-12-04
Equipping pastors to address racism faithfully from the

pulpit. Of all the activities that come with being a minister, sermon preparation can loom largest - especially when racism is the subject. You've got to address racism with your white congregation from the pulpit. But, truthfully, you can't wrap your head around how to preach about this topic thoughtfully and sensitively. In *Preaching about Racism*, preaching professor and pastor Carolyn Helsel speaks directly to other faith leaders about how to address racism from the pulpit. In her first book, *Anxious to Talk about It: Helping White Christians Talk Faithfully about Racism*, Helsel addressed the anxiety white Christians experience around conversations about race. In this follow-up, Helsel provides strategies and a theoretical framework for crafting biblical and theological sermons that incorporate insights from social sciences and psychology, gleaned from more than a decade of writing and teaching about racism. Written for the busy pastor, several chapters are quick reads - helpful reminders as you prepare a thoughtful and sensitive sermon - while others dig deeper on the theory behind the crucial work of dismantling racism.

Delusion and Self-Deception - Tim Bayne 2010-10-18
This collection of essays focuses on the interface between delusions and self-deception. As pathologies of belief, delusions and self-deception raise many of the same challenges for those seeking to understand them. Are delusions and self-deception entirely distinct phenomena, or might some forms of self-deception also qualify as delusional? To what extent might models of self-deception and delusion share common factors? In what ways do affect and motivation enter into normal belief-formation, and how might they be implicated in self-deception and delusion? The essays in this volume

tackle these questions from both empirical and conceptual perspectives. Some contributors focus on the general question of how to locate self-deception and delusion within our taxonomy of psychological states. Some contributors ask whether particular delusions - such as the Capgras delusion or anosognosia for hemiplegia - might be explained by appeal to motivational and affective factors. And some contributors provide general models of motivated reasoning, against which theories of pathological belief-formation might be measured. The volume will be of interest to cognitive scientists, clinicians, and philosophers interested in the nature of belief and the disturbances to which it is subject.

The Abraham Dilemma - George Graham 2015

What, if anything, is religious or spiritual delusion? What does religious delusion reveal about the difference between good and bad spirituality? 'The Abraham Dilemma' is the first book written by a philosopher on the topic of religious delusion - on the disorder's causes,

contents, consequences, diagnosis and treatment.

Social and Psychological Bases of Ideology and System Justification - John T. Jost 2009-03-11

This new volume on Social and Psychological Bases of Ideology and System Justification brings together several of the most prominent social and political psychologists who are responsible for the resurgence of interest in the study of ideology, broadly defined. Leading scientists and scholars from several related disciplines, including psychology, sociology, political science, law, and organizational behavior present their cutting-edge theorizing and research. Topics include the social, personality, cognitive and motivational antecedents and consequences of adopting liberal versus conservative ideologies, the social and psychological functions served by political and religious ideologies, and the myriad ways in which people defend, bolster, and justify the social systems they inhabit. This book is the first of its kind, bringing together formerly independent lines of research on ideology and system justification.
