

Darwin Presents His Case Chapter 15 3

Yeah, reviewing a book **Darwin Presents His Case Chapter 15 3** could ensue your close contacts listings. This is just one of the solutions for you to be successful. As understood, execution does not recommend that you have astounding points.

Comprehending as capably as conformity even more than extra will allow each success. adjacent to, the revelation as without difficulty as acuteness of this Darwin Presents His Case Chapter 15 3 can be taken as capably as picked to act.

Statistics - Richard A. Johnson 2019-01-30

Statistics: Principles and Methods, 8th Edition provides students and business professionals with a comprehensive introduction to statistics concepts, terminology, and methods with a wide array of practical applications. Real-world data provides an easily relatable frame of reference, while numerous examples reinforce key ideas and demonstrate critical concepts to help ease student comprehension. Designed for those seeking a highly practical introduction to statistical measurement, reasoning, and analysis, this book requires no specific mathematical background and leaves derivations behind in favor of logic, reasoning, and modern statistics software. Concepts are introduced first in a real-life setting to illustrate immediate relevancy, and are subsequently expanded to relate underlying mechanisms, limitations, and further applications. An emphasis on the relationship between validity and assumptions underscores the importance of critical thinking and the use of appropriate models while instilling thoughtful habits that lead to accuracy in interpretation. Going beyond the typical introductory text to keep the focus on application, this book gives students a deeper understanding of statistics as it is used every day across disciplines and industries.

Bibliography of the History of Medicine -

Teleology, First Principles, and Scientific Method in Aristotle's Biology - Allan Gotthelf 2012-02-23

This volume draws together Allan Gotthelf's pioneering work on Aristotle's biology. He examines Aristotle's natural teleology, the axiomatic structure of biological explanation, and the reliance on scientifically organized data in the three great works with which Aristotle laid the foundations of biological science.

The Origin of Species - Charles Darwin 1993

"The Origin of Species," by Charles Darwin, is part of the "Barnes & Noble Classics" series, which offers quality editions at affordable prices to the student and the general reader, including new scholarship, thoughtful design, and pages of carefully crafted extras. Here are some of the remarkable features of "Barnes & Noble Classics" New introductions commissioned from today's top writers and scholars Biographies of the authors Chronologies of contemporary historical, biographical, and cultural events Footnotes and endnotes Selective discussions of imitations, parodies, poems, books, plays, paintings, operas, statuary, and films inspired by the work Comments by other famous authors Study questions to challenge the reader's viewpoints and expectations Bibliographies for further reading Indices & Glossaries, when appropriate All editions are beautifully designed and are printed to superior specifications; some include illustrations of historical interest. "Barnes & Noble Classics" pulls together a constellation of influences—biographical, historical, and literary—to enrich each reader's understanding of these enduring works. On December 27, 1831, the young naturalist Charles Darwin left Plymouth Harbor aboard the HMS Beagle. For the next five years, he conducted research on plants and animals from around the globe, amassing a body of evidence that would culminate in one of the greatest discoveries in the history of mankind—the theory of evolution. Darwin presented his stunning insights in a landmark book that forever altered the way human beings view themselves and the world they live in. In "The Origin of Species," he convincingly demonstrates the fact of evolution: that existing animals and plants cannot have appeared separately but must have slowly transformed from ancestral creatures. Most important, the book fully explains the mechanism that effects such a transformation: natural selection, the idea that made evolution scientifically intelligible for the first time. One of the few revolutionary works of science that is engrossingly

readable, "The Origin of Species" not only launched the science of modern biology but also has influenced virtually all subsequent literary, philosophical, and religious thinking. George Levine, Kenneth Burke Professor of English Literature at Rutgers University, has written extensively about Darwin and the relation of science and literature, particularly in "Darwin and the Novelists." He is the author of many related books, including "The Realistic Imagination, Dying to Know," and his birdwatching memoirs, "Lifebirds."

Evolutionary Analysis - Jon C. Herron 1998

By presenting evolutionary biology as an ongoing research effort, this best-seller aims to help readers think like scientists. The authors convey the excitement and logic of evolutionary science by introducing principles through recent and classical studies, and by emphasizing real-world applications. Features a new chapter on Phylogenomics and the Molecular Basis of Adaptation (Ch. 15). Offers an earlier presentation of Reconstructing Evolutionary Trees, reflecting the growing importance of this topic in the field. Includes the latest research and examples, giving students access to the most current developments in the field. Includes full-color photographs, diagrams and data-graphics throughout, developed by the author.

Australia's War Crimes Trials 1945-51 - Georgina Fitzpatrick 2016-08-25

This unique volume provides a detailed analysis of Australia's 300 war crimes trials of principally Japanese accused conducted in the immediate aftermath of the Second World War.

Contingent Valuation - R. Carson 2012-01-01

This major reference work the first of its kind provides a comprehensive and authoritative introduction to the large and growing literature on contingent valuation. It includes entries on over 7,500 contingent valuation papers and studies from over 130 countries covering both the published and grey literatures. This book provides an interpretive historical account of the development of contingent valuation, the most commonly used approach to placing a value on goods not normally sold in the marketplace. The major fields catalogued here include culture, the environment, and health application. This bibliography is an ideal starting point for researchers wanting to find other studies that have valued goods or used techniques similar to those they are interested in. For those wanting to conduct meta analyses, the book will serve as an invaluable guide to source material. For those wanting to conduct meta analyses, the book will serve as an invaluable guide to source material. In addition to the print edition we offer access, for purchasers of the book, to a website providing the contents of as a searchable Word document and in a variety of standard bibliographic database forms. Contingent Valuation is an indispensable reference source for researchers, scholars and policymakers concerned with survey approaches to the problem of environmental valuation.

Why Darwin Matters - Michael Shermer 2006-08-08

Shermer, a creationist-turned-scientist, argues that Intelligent Design proponents are invoking a combination of bad science, political antipathy, and flawed theology. He decodes the scientific evidence to show that evolution is not "just a theory" and illustrates how it achieves the design of life through the bottom-up process of natural selection.

Typographical Journal - 1910

Darwin on Trial - Phillip E. Johnson 1991-06-03

Darwin's theory of evolution is accepted by most educated Americans as simple fact. This easy acceptance, however, hides from us the many ways in which evolution—as an idea—shapes our thinking about a great

many things. What if this idea is wrong? Berkeley law professor Phillip E. Johnson looks at the evidence for Darwinistic evolution the way a lawyer would—with a cold dispassionate eye for logic and proof. His discovery is that scientists have put the cart before the horse. They prematurely accepted Darwin's theory as fact and have been scrambling to find evidence for it. Darwin on Trial is a cogent and stunning tour de force that not only rattles the cages of conventional wisdom, but could provide the basis for a fundamental change in the way educated Americans regard themselves, their origins, and their fate.

[Soviet Marxism and Natural Science](#) - David Joravsky 2013-04-15

Originally published in 1961. Russian Marxist philosophy of science originated among men and women who gave their whole lives to rebellion against established authority. The original tension within Marxist philosophy between positivism and metaphysics was repressed but not resolved in this first phase of Soviet Marxism. In this volume the author correlates the development of ideas with trends in the Cultural Revolution and against this background it is possible to understand why debates over general philosophy gave way to conflicts over specific sciences in the aftermath of the first Five Year Plan and why there was a genuine crisis in Soviet biology.

Reports - International Typographical Union 1909

[The Eugenic Mind Project](#) - Robert A. Wilson 2017-12-22

An examination of eugenic thinking past and present, from forced sterilization to prenatal screening, drawing on experience with those who survived eugenics. Part science and part social movement, eugenics emerged in the late nineteenth century as a tool for human improvement. In response to perceived threats of criminality, moral degeneration, feeble-mindedness, and “the rising tide of color,” eugenic laws and social policies aimed to better the human race by regulating reproductive choice through science and technology. In this book, Rob Wilson examines eugenic thought and practice—from forced sterilization to prenatal screening—drawing on his experience working with eugenics survivors. Using the social sciences' standpoint theory as a framework to understand the intersection of eugenics, disability, social inclusiveness, and human variation, Wilson focuses on those who have lived through a eugenic past and those confronted by the legacy of eugenic thinking today. By doing so, he brings eugenics from the distant past to the ongoing present. Wilson discusses such topics as the conceptualization of eugenic traits; the formulation of laws regulating immigration and marriage and requiring sexual sterilization; the depiction of the targets of eugenics as “subhuman”; the systematic construction of a concept of normality; the eugenic logic in prenatal screening and contemporary bioethics; and the incorporation of eugenics and disability into standpoint theory. Individual purchasers of this book will receive free access to the documentary *Surviving Eugenics*, available at [EugenicsArchive.ca/film](#).

Journal of the House of Representatives - Texas. Legislature. Senate 1895

Teaching About Evolution and the Nature of Science - National Academy of Sciences 1998-05-06

Today many school students are shielded from one of the most important concepts in modern science: evolution. In engaging and conversational style, *Teaching About Evolution and the Nature of Science* provides a well-structured framework for understanding and teaching evolution. Written for teachers, parents, and community officials as well as scientists and educators, this book describes how evolution reveals both the great diversity and similarity among the Earth's organisms; it explores how scientists approach the question of evolution; and it illustrates the nature of science as a way of knowing about the natural world. In addition, the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution. The book includes sample activities for teaching about evolution and the nature of science. For example, the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution. Background information, materials, and step-by-step presentations are provided for each activity. In addition, this volume: Presents the evidence for evolution, including how evolution can be observed today. Explains the nature of science through a variety of examples. Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction. Answers frequently asked questions about evolution. *Teaching About Evolution and the Nature of Science*

builds on the 1996 National Science Education Standards released by the National Research Council and offers detailed guidance on how to evaluate and choose instructional materials that support the standards. Comprehensive and practical, this book brings one of today's educational challenges into focus in a balanced and reasoned discussion. It will be of special interest to teachers of science, school administrators, and interested members of the community.

New Perspectives on Affect and Learning Technologies - Rafael A. Calvo 2011-07-15

This monograph integrates theoretical perspectives on affect and learning with recent research in affective computing with an emphasis on building new learning technologies. The "new perspectives" come from the intersection of several research themes: - Basic research on emotion, cognition, and motivation applied to learning environments - Pedagogical and motivational strategies that are sensitive to affective and cognitive processes - Multimodal Human Computer Interfaces, with a focus on affect recognition and synthesis - Recent advances in affect-sensitive Intelligent Tutoring Systems - Novel methodologies to investigate affect and learning - Neuroscience research on emotions and learning

Sisters and the English Household - Anne D. Wallace 2018-09-15

Sisters and the English Household revalues unmarried adult sisters in nineteenth-century English literature as positive figures of legal and economic autonomy representing productive labor in the domestic space. As a crucial site of contested values, the adult unmarried sister carries the discursive weight of sustained public debates about ideals of domesticity in nineteenth-century England. Engaging scholarly histories of the family, and providing a detailed account of the 70-year Marriage with a Deceased Wife's Sister controversy, Anne Wallace traces an alternative domesticity anchored by adult sibling relations through Dorothy Wordsworth's journals; William Wordsworth's poetry; Mary Lamb's essay "On Needle-Work"; and novels by Jane Austen, Elizabeth Gaskell, Charles Dickens, Dinah Mulock Craik and George Eliot. Recognizing adult sibling relationships, and the figure of the adult unmarried sibling in the household, as primary and generative rather than contingent and dependent, and recognizing material economy and law as fundamental sources of sibling identity, *Sisters and the English Household* resets the conditions for literary critical discussions of sibling relations in nineteenth-century England.

[The New York Times Index](#) - 1926

The Selfish Gene - Richard Dawkins 1989

Science need not be dull and bogged down by jargon, as Richard Dawkins proves in this entertaining look at evolution. The themes he takes up are the concepts of altruistic and selfish behaviour; the genetical definition of selfish interest; the evolution of aggressive behaviour; kinship theory; sex ratio theory; reciprocal altruism; deceit; and the natural selection of sex differences. 'Should be read, can be read by almost anyone. It describes with great skill a new face of the theory of evolution.' W.D. Hamilton, *Science*

[In the Light of Evolution](#) - National Academy of Sciences 2017-01-01

Biodiversity—the genetic variety of life—is an exuberant product of the evolutionary past, a vast human-supportive resource (aesthetic, intellectual, and material) of the present, and a rich legacy to cherish and preserve for the future. Two urgent challenges, and opportunities, for 21st-century science are to gain deeper insights into the evolutionary processes that foster biotic diversity, and to translate that understanding into workable solutions for the regional and global crises that biodiversity currently faces. A grasp of evolutionary principles and processes is important in other societal arenas as well, such as education, medicine, sociology, and other applied fields including agriculture, pharmacology, and biotechnology. The ramifications of evolutionary thought also extend into learned realms traditionally reserved for philosophy and religion. The central goal of the *In the Light of Evolution* (ILE) series is to promote the evolutionary sciences through state-of-the-art colloquia—in the series of Arthur M. Sackler colloquia sponsored by the National Academy of Sciences—and their published proceedings. Each installment explores evolutionary perspectives on a particular biological topic that is scientifically intriguing but also has special relevance to contemporary societal issues or challenges. This tenth and final edition of the *In the Light of Evolution* series focuses on recent developments in phylogeographic research and their relevance to past accomplishments and future research directions.

The Economics of Welfare - Arthur Cecil Pigou 1924

The Oxford Handbook of Affective Computing - Rafael A. Calvo 2015

"The Oxford Handbook of Affective Computing is a definitive reference in the burgeoning field of affective computing (AC), a multidisciplinary field encompassing computer science, engineering, psychology, education, neuroscience, and other disciplines. AC research explores how affective factors influence interactions between humans and technology, how affect sensing and affect generation techniques can inform our understanding of human affect, and on the design, implementation, and evaluation of systems involving affect at their core. The volume features 41 chapters and is divided into five sections: history and theory, detection, generation, methodologies, and applications. Section 1 begins with the making of AC and a historical review of the science of emotion. The following chapters discuss the theoretical underpinnings of AC from an interdisciplinary viewpoint. Section 2 examines affect detection or recognition, a commonly investigated area. Section 3 focuses on aspects of affect generation, including the synthesis of emotion and its expression via facial features, speech, postures, and gestures. Cultural issues are also discussed. Section 4 focuses on methodological issues in AC research, including data collection techniques, multimodal affect databases, formats for the representation of emotion, crowdsourcing techniques, machine learning approaches, affect elicitation techniques, useful AC tools, and ethical issues. Finally, Section 5 highlights applications of AC in such domains as formal and informal learning, games, robotics, virtual reality, autism research, health care, cyberpsychology, music, deception, reflective writing, and cyberpsychology. This compendium will prove suitable for use as a textbook and serve as a valuable resource for everyone with an interest in AC."--

Aristotle - Aristotle 1882

A Delicate Arrangement - Arnold C. Brackman 1980

Includes two essays by Wallace, "On the law which has regulated the introduction of new species" and "On the tendency of varieties to depart indefinitely from the original type."

Applied Mechanics Reviews - 1975

Democracy and Education - John Dewey 1916

In this book, Dewey tries to criticize and expand on the educational philosophies of Rousseau and Plato. Dewey's ideas were seldom adopted in America's public schools, although a number of his prescriptions have been continually advocated by those who have had to teach in them.

The Moral Animal - Robert Wright 1995

Presents the latest findings in the emerging field of evolutionary psychology, which views human behavior in light of Darwinian theory, unveiling the unconscious strategies that shape our romantic choices, familial feelings, friendships, and office politics.

Theistic Evolution - J. P. Moreland 2017-11-15

Many prominent Christians insist that the church must yield to contemporary evolutionary theory and therefore modify traditional biblical ideas about the creation of life. They argue that God used—albeit in an undetectable way—evolutionary mechanisms to produce all forms of life. Featuring two dozen highly credentialed scientists, philosophers, and theologians from Europe and North America, this volume contests this proposal, documenting evidential, logical, and theological problems with theistic evolution—making it the most comprehensive critique of theistic evolution yet produced.

Evolution - David Zeigler 2014-04-14

Evolution: Components and Mechanisms introduces the many recent discoveries and insights that have added to the discipline of organic evolution, and combines them with the key topics needed to gain a fundamental understanding of the mechanisms of evolution. Each chapter covers an important topic or factor pertinent to a modern understanding of evolutionary theory, allowing easy access to particular topics for either study or review. Many chapters are cross-referenced. Modern evolutionary theory has expanded significantly within only the past two to three decades. In recent times the definition of a gene has evolved, the definition of organic evolution itself is in need of some modification, the number of known mechanisms of evolutionary change has increased dramatically, and the emphasis placed on opportunity and contingency has increased. This book synthesizes these changes and presents many of the novel topics in evolutionary

theory in an accessible and thorough format. This book is an ideal, up-to-date resource for biologists, geneticists, evolutionary biologists, developmental biologists, and researchers in, as well as students and academics in these areas and professional scientists in many subfields of biology. Discusses many of the mechanisms responsible for evolutionary change Includes an appendix that provides a brief synopsis of these mechanisms with most discussed in greater detail in respective chapters Aids readers in their organization and understanding of the material by addressing the basic concepts and topics surrounding organic evolution Covers some topics not typically addressed, such as opportunity, contingency, symbiosis, and progress

Signs of Intelligence - William Dembski 2001-03

A collection of fourteen essays which provide an overview of the argument for intelligent design, with diagrams, explanations, and relevant quotations.

The Young Darwin and His Cultural Circle - Edw. Manier 1978-02-28

This book is an analysis of part of an important episode in the history of science. It deals with a short period in the life of Charles Darwin: the years 1837-1844 when he struggled with the first drafts of his "species theory." The primary textual basis of my inquiry is provided by two sets of notebooks which he kept during the interval 1837-1839, and which deal with the "transmutation of species" and "metaphysics . . . morals and speculations on expression." The notebooks point to additional manuscript material and to Darwin's marginal annotations of a number of the books he read at this same time. This collection of primary documents reveals the circle of philosophical, literary, religious, political, and ethical authors whose works were read and analyzed by the young Darwin. I call this group of authors his cultural circle. My first goal is the description and analysis of the various positions concerning the methodology of science, the place of mind in nature, ethics and social philosophy, and natural religion professed by members of this circle. The next step is the reconstruction of the circle's influence upon the young Darwin's effort to formulate and justify related aspects of his own scientific practice. I pay particular attention to the dialectical development of Darwin's standards for scientific explanation and the scientific uses of language, especially in his employment of the metaphors associated with the words 'selection' and 'struggle.'

The Galapagos Islands - Charles Darwin 1996

The Situational Mentor - Gill Lane 2016-02-24

Because the mentoring process involves a number of distinct stages, a wide range of skills are needed throughout the process and these skills are situational. In other words, a skilled mentor understands the principles of mentoring, but is also able to use appropriate skills according to the person with whom they are working and the stage they have reached in the relationship. In addition, different types of mentoring programme will demand a skills set particular to each. As with many other areas of development, a mix of the theoretical and the practical is needed to ensure that programmes and relationships achieve their potential. In *The Situational Mentor: An International Review of Competences and Capabilities in Mentoring*, David Clutterbuck and Gill Lane have brought together contributions from leading international academics and practitioners to define the key skills involved in mentoring and explore how these may be tailored to ensure a successful outcome in all instances.

Bond and anchorage of embedded reinforcement: Background to the fib Model Code for Concrete Structures 2010 - fib - Fédération internationale du béton 2014-05-01

As part of the preparation for the fib Model Code for Concrete Structures 2010, task group 4.5 Bond Models undertook a major review of rules for bond and anchorage of reinforcement in the CEB-FIP Model Code 1990. This bulletin presents the outcome of that review, describes the rationale for the revisions and presents the evidence on which the revisions are based. The principle changes in MC2010 include raising the limit on concrete strength that may be used when determining bond resistance to 110MPa, introduction of a coefficient η_4 to cater for different reinforcement Classes, and coverage of new construction materials including epoxy coated and headed bars. The format of design rules has been changed to permit more rational treatment of confinement from concrete cover and transverse reinforcement, the contribution of end hooks and bends for tension bars, and end bearing to compression laps. New guidance is provided covering a range of construction techniques and service environments and the influence of long term degradation.

Analyses of various aspects of detailing on performance of laps and anchorages have resulted in discontinuation of the 'proportion lapped' factor α_6 , alterations to requirements of transverse reinforcement at laps, and have resolved inconsistencies in provisions for bundled bars between major national codes. Apparent inconsistencies in existing rules for lapped joints and anchorages and between the local bond/slip model and design rules are also resolved, thus allowing integration of application rules and modelling. Finally, the basis for an attempt to introduce simple detailing rules for laps and anchorages is described.

The Norton History of the Human Sciences - Roger Smith 1997

Beginning with the Renaissance's rediscovery of Greek psychology, political philosophy, and ethics, author Roger Smith recounts how the human sciences gradually organized themselves around a scientific conception of psychology and how this trend has continued to the present day in a circle of interactions between science and ordinary life, influencing and influenced by popular culture. Photos & drawings.

The Fourth Discontinuity - Bruce Mazlish 1993-01-01

Discusses the relationship between humans and machines, pondering the implications of humans becoming more mechanical and of computer robots being programmed to think. He describes early Greek and Chinese automatons and discusses ideas of previous centuries and of individuals on this subject.

Living in a Dangerous Climate - Renée Hetherington 2012-04-30

Living in a Dangerous Climate provides a journey through human and Earth history, showing how a changing climate has affected human evolution and society. Is it possible for humanity to evolve quickly, or is slow, gradual, genetic evolution the only way we change? Why did all other Homo species go extinct while Homo sapiens became dominant? How did agriculture, domestication and the use of fossil fuels affect humanity's growing dominance? Do today's dominant societies - devoted as they are to Darwinism and 'survival of the fittest' - contribute to our current failure to meet the hazards of a dangerous climate? Unique and thought provoking, the book links scientific knowledge and perspectives of evolution, climate change and economics in a way that is accessible and exciting for the general reader. The book is also valuable for courses on climate change, human evolution and environmental science.

Origin of Species Revisited - Donald Forsdyke 2001

Major inconsistencies in Darwin's theory of the origin of species by natural selection remained unresolved for over a century until the results of recent research in various genome projects led to the theory's reinterpretation. Reviewing this new information, Donald Forsdyke, a laboratory scientist involved in genome research, wondered whether similar discoveries could have been made a century earlier, by one of Darwin's contemporaries. The Origin of Species Revisited describes his investigation into the history of evolutionary biology and its startling conclusion. The trail led first to Joseph Hooker and Thomas Huxley, who had been both the theory's strongest supporters and its most penetrating critics, and eventually to the Victorian

George Romanes and Darwin's young research associate William Bateson. Although these men were well-known, their resolution of the origin of species paradox has either been ignored (Romanes), or ignored and reviled (Bateson). Four years after Darwin's death, Romanes published a theory of the origin of species by means of "physiological selection" that resolved the inconsistencies in Darwin's theory and introduced the idea of a "peculiarity" of the reproductive system that allowed selective fertility between "physiological complements." Forsdyke argues that the chemical basis of the origin of species by physiological selection is actually the species-dependent component of the base composition of DNA, showing that Romanes thus anticipated modern biochemistry. Using this new perspective Forsdyke considers some of the outstanding problems in biology and medicine, including the question of how "self" is distinguished from "not-self" by members of different species. Finally he examines the political and ideological forces that led to Romanes' contribution to evolutionary biology remaining unappreciated until now.

The Extraction State - Charles Blanchard 2021-01-12

The history of the United States of America is also the history of the energy sector. Natural gas provides the fuel that allows us to heat our homes in winter and cool them in summer with the touch of a button or turn of a dial—when the industry runs smoothly. From the oil crisis of the 1970s to the fall of Enron and the California electricity crisis at the turn of the century to contemporary issues of hydraulic fracking, poorly conceived government policies have sometimes left us shivering, stranded, or with significantly lighter wallets. In this expansive narrative, Charles Blanchard traces the rise of natural gas and the regulatory missteps that nearly ruined the market. Beginning in the 1880s, The Extraction State explains how the New Deal regulatory compact came together in the 1920s, even before the Great Depression, and how it fell apart in the 1970s. From there, the book dissects the policies that affect us today, and explores where we might be headed in the near future.

Understanding the Australian Health Care System - Eileen Willis 2019-10-04

Understanding the Australian Health Care System 4e is the essential guide to the complexities of health care in Australia. Key theoretical concepts and current issues along with the structures and policies influencing health care professionals are explored by leading experts led by authors, Eileen Willis, Louise Reynolds and Trudy Rudge. The text is divided into two sections. The first is about the multiple systems, services and schemes that make up health care in Australia. The second explores the roles of fifteen health professions working within the current system, with a focus on key themes of interprofessional practice, chronic illness, and quality and safety.
