Age of the Masters - Reyner Banham 1975

"The Age of the Masters was the age of an architectural revolution that lasted over fifty years - from Charles Rennie Mackintosh's Glasgow Art School at the beginning of the century to Mies van der Rohe's National Gallery in Berlin at the end of the sixties. While they lived, the Masters comprised some of the most powerful architectural talents the Western world has yet produced, and at least two men of towering genius - Frank Lloyd Wright and Le Corbusier. Their aspirations for the future of men, cities, and society may have been thwarted, but the prototypes they created still reflect the light of their creative fervor..." --

Fire in Montana - Greg Martin 2006-05

In the summer of 1949 fifteen smokejumpers parachuted into a remote Montana canyon called Mann Gulch. It started as a very small fire in rugged country but within two hours after landing, thirteen of these young men were caught in a raging inferno and were killed. They died bravely, together with their friends, and in the service of their country. Everyone was young and attractive, healthy and strong, enthusiastic and in love. They were bursting into the prime of their lives. There were no malcontents here. Everyone did their best but events overtook them. Until now the actual time line has never been connected to the people involved. Fire in Montana connects the lives of young smokejumpers who lived with a joy of life and expectations of shining futures, the forest rangers and volunteers who fought valiantly to rescue them, and their families, lovers, and friends who were forced to wait and pray, then face the devastating and heart wrenching loss.

A John Hick Reader - John Hick 2011-07-05

"Canonical criticism" is not a recognized branch of biblical studies--granting new focus to questions of the authority and truth of the scriptural writings. Developed within a critical sense of the dominant historical-critical tone of biblical studies, canonical criticism as it has been pursued by the American scholars Brevard S. Childs and James A. Sanders stands as witness to the theological necessity of a more literary approach to the Bible. This book both criticizes the "canonical" enterprise, and takes it much further into readings of the canon from the perspective not only of literature, but also art, and in particular the biblical art of Rembrandt. In addition, it remains acutely conscious of the contemporary environment of our reading within the political concerns of feminist criticism, popular absorption in film and the narratives of the screen, and finally the crisis, or crises, which characterize the so-called "postmodern condition." What

emerges is at once highly critical of traditional strategies of canonization, and at the same time constructive and concerned to recover the Bible for our own time in readings which move outside the limited academic concerns of the biblical critic or the institutions of the church and religious community.

Complexity Theories of Cities Have Come of Age - Juval Portugali 2012-02-03

Today, our cities are an embodiment of the complex, historical evolution of knowledge, desires and technology. Our planned and designed activities co-evolve with our aspirations, mediated by the existing technologies and social structures. The city represents the accretion and accumulation of successive layers of collective activity, structuring and being structured by other, increasingly distant cities, reaching now right around the globe. This historical and structural development cannot therefore be understood or captured by any set of fixed quantitative relations. Structural changes imply that the patterns of growth, and their underlying reasons change over time, and therefore that any attempt to control the morphology of cities and their patterns of flow by means of planning and design, must be dynamical, based on the mechanisms that drive the changes occurring at a given moment. This carefully edited post-proceedings volume gathers a snapshot view by leading researchers in field, of current complexity theories of cities. In it, the achievements, criticisms and potentials yet to be realized are reviewed and the implications to planning and urban design are assessed.

The Practice of Organizational Diagnosis - Clayton Alderfer 2011

The Practice of Organizational Diagnosis: Theory & Methods presents a new paradigm for examining the intergroup dynamics of organizations by combining the procedures of organizational diagnosis with the theory of embedded intergroup relations. In this volume, Alderfer explains the relevance of the paradigm concept for the present work, shows the importance of intergroup relations in the formative organization studies, reviews extant modes of organizational diagnosis, and demonstrates the limitations of interpersonal and intra-group theories. He then presents the five laws of embedded intergroup relations as a response to the problems associated with the earlier work. After comparing and contrasting alternative group level theories and explaining the several meanings of empirical support, the author describes the empirical basis of the five laws. Based on examining alternative codes of professional conduct and applying the five laws, he provides his prescriptions for the ethical basis of sound diagnostic practice. With the theory and ethical position in place, he then explains procedures for conducting each phase of organizational diagnosis: entry, data collection, data analysis, and feedback. He follows that by reporting the empirical bases for the methods used in the four phases. The volume concludes by describing the courses and educational processes essential for

educating people to conduct organizational diagnoses. A recurring theme from beginning to end is that the lawfulness of human behavior in relation to organizations is as applicable to diagnosticians, whether working alone or in teams, as it is to their clients. By addressing theory, method, data, and values, the volume presents a complete paradigm for organizational diagnosis.
