Waste Management for the Food Industries - Ioannis S. Arvanitoyannis 2010-07-28

The continuously increasing human population, has resulted in a huge demand for processed and packaged foods. As a result of this demand, large amounts of water, air, electricity and fuel are consumed on a daily basis for food processing, transportation and preservation purposes. Although not one of the most heavily polluting, the food industry does contribute to the increase in volume of waste produced as well as to the energy expended to do so. For the first time, nine separate food industry categories are thoroughly investigated in Waste Management for the Food Industries in an effort to help combat this already acute problem. The current state of environmental management systems is described, offering comparisons of global legislation rarely found in other resources. An

extensive review of commercial equipment, including advantages and disadvantages per employed waste management technique, offers a unique perspective for any academic, student, professional, and/or consultant in the food, agriculture and environmental industries. Thoroughly examines the most prevalent and most polluting industries such as Meat, Fish, Dairy, Olive Oil, Juice and Wine industries Includes synoptical tables [methods employed, physicochemical or microbiological parameters altered after treatment etc] and comparative figures of the effectiveness of various waste management methods Contains nearly 2500 of the most up-to-date references available

Maternity and Paternity at Work - Laura Addati 2014-05-13

This report provides a picture of where we stand and what we have learned so far about maternity and paternity rights across the world. It offers a rich international comparative analysis of law and practice relating to maternity protection at work in 185 countries and territories, comprising leave, cash benefits, employment protection and non-discrimination, health protection, breastfeeding arrangements at work and childcare. Expanding on previous editions, it is based on an extensive set of new legal and statistical indicators, including coverage in law and in practice of paid maternity leave as well as statutory provision of paternity and parental leave and their evolution over the last 20 years. The report also takes account of the recent economic crisis and austerity measures. It shows how well national laws and practice conform to the ILO Maternity Protection Convention, 2000 (No. 183), its accompanying Recommendation (No. 191) and the Workers with Family Responsibilities Convention, 1981 (No. 156), and offers guidance on policy design and implementation. This report shows that a majority of countries have

established legislation to protect and support maternity and paternity at work, even if those provisions do not always meet the ILO standards. One of the persistent challenges is the effective implementation of legislation, to ensure that all workers are able to benefit from these essential labour rights.

Monitoring, Reporting, and Verification Manual for Clean Development Mechanism Projects - Asian Development Bank 2016-06-01

The Clean Development Mechanism (CDM), a market mechanism under the Kyoto Protocol, has been successful in supporting mitigation actions through carbon finance. With nearly 7,700 projects and 290 Program of Activities registered by the CDM Executive Board, the CDM allows GHG emission reduction projects in developing countries to generate Certified Emission Reductions which can be used to offset mandatory or voluntary emission reduction targets. It however requires a robust monitoring, reporting, and verification (MRV) to ensure social and environmental integrity of such projects and the emissions reductions thereof. This MRV manual is intended to assist CDM project developers in understanding and managing the MRV requirements and process of their CDM projects in a simple step-by-step manner with the help of real examples and practical tips. While this MRV manual has been developed primarily to assist CDM project developers, it also aspires to be of help for projects participating

in other existing and emerging market mechanisms. These may include bilateral mechanisms; voluntary carbon markets; regional, national, and subnational carbon markets; and any of the cooperative approaches and new market mechanism for the post-2020 carbon markets consequent to the Paris Agreement adopted at COP21 in December 2015. As carbon markets in the region evolve beyond CDM, there is a strong need to maintain and further build institutional capacities to ensure growth and enhanced effectiveness of carbon markets---and this MRV manual is an effort in that direction.

Cost-Benefit Analysis for Development - Asian Development Bank 2013-01-01

This practical guide is a supplement to the Guidelines for the Economic Analysis of Projects. It provides an overview of recent methodological developments in cost-benefit analysis as well as suggested improvements in the economic analysis of projects in selected sectors through case studies. These case studies illustrate the application of suggested methodologies, taking into account sector-specific needs, as well as difficulties faced by practitioners in terms of data and time constraints during project processing. It also aims to contribute to ADB's capacity building initiatives as this will be the main reference material for conduct of economic analysis.

The Other End of the Spear - John J. Mcgrath 2011-09-16

This book looks at several troop categories based on primary function and analyzes the ratio between these categories to develop a general historical ratio. This ratio is called the Tooth-to-Tail Ratio. McGrath's study finds that this ratio, among types of deployed US forces, has steadily declined since World War II, just as the nature of

warfare itself has changed. At the same time, the percentage of deployed forces devoted to logistics functions and to base and life support functions have increased, especially with the advent of the large-scale of use of civilian contractors. This work provides a unique analysis of the size and composition of military forces as found in historical patterns. Extensively illustrated with charts, diagrams, and tables. Poor People's Knowledge - J. Michael Finger 2004-01-29

How can we help poor people earn more from their knowledge rather than from their sweat and muscle alone? This book is about increasing the earnings of poor people in poor countries from their innovation, knowledge, and creative skills. Case studies look at the African music industry; traditional crafts and ways to prevent counterfeit crafts designs; the activities of fair trade organizations; biopiracy and the commercialization of ethnobotanical knowledge; the use of intellectual property laws and other tools to protect traditional knowledge. The contributors' motivation is sometimes to maintain the art and culture of poor people, but they recognize that except in a museum setting, no traditional skill can live on unless it has a viable market. Culture and commerce more often complement than conflict in the cases reviewed here. The book calls attention to the unwritten half of the World Trade Organization's Agreement on the Trade Related Aspects of Intellectual Property (TRIPS). TRIPS is about knowledge that industrial countries own, and which poor people buy. This book is about knowledge that poor people in poor countries generate and have to sell. It will be of interest to students and scholars of international trade and law, and to anyone with an interest in ways developing countries can find markets for cultural, intellectual, and traditional knowledge.

Handbook of African Medicinal Plants, Second Edition - Maurice M. Iwu 2014-02-04

With over 50,000 distinct species in sub-Saharan Africa alone, the African continent is endowed with an enormous wealth of plant resources. While more than 25 percent of known species have been used for several centuries in traditional African medicine for the prevention and treatment of diseases, Africa remains a minor player in the global natural products market largely due to lack of practical information. This updated and expanded second edition of the Handbook of African Medicinal Plants provides a comprehensive review of more than 2,000 species of plants employed in indigenous African medicine, with full-color photographs and references from over 1,100 publications. The first part of the book contains a catalog of the plants used as ingredients for the preparation of

traditional remedies, including their medicinal uses and the parts of the plant used. This is followed by a pharmacognostical profile of 170 of the major herbs, with a brief description of the diagnostic features of the leaves, flowers, and fruits and monographs with botanical names, common names, synonyms, African names, habitat and distribution, ethnomedicinal uses, chemical constituents, and reported pharmacological activity. The second part of the book provides an introduction to African traditional medicine, outlining African cosmology and beliefs as they

relate to healing and the use of herbs, health foods, and medicinal plants. This book presents scientific documentation of the correlation between the observed folk use and demonstrable biological activity, as well as the characterized constituents of the plants.
