TECHNICAL WRITING - B. N. BASU 2007-12-29

This book deals with technical writing with an emphasis on how to write a thesis for a university degree or a research paper for publication in a journal. It teaches students, step by step through several examples, how to plan, organize, draft, develop and prepare such a document for presentation. The book gives, besides usage in grammar, a precise method of preparing a document simply, clearly and concisely, organizing it by going into the details of its front matter, main text and end matter and its subdivisions, without missing the finer details like figures, tables, equations, references, etc. It describes how to compile and locate the original sources and view the specific topic to be researched in the background of earlier contributions. It addresses issues related to identifying such authors and their writings through their names and affiliations, and abstracts of the work, etc. Some peripheral issues such as certificate and copyright have also been discussed. The book will be useful to students, engineers and scientists alike, helping them break the ice by removing their confusion, bewilderment and hesitation in technical writing. It would be a boon to the beginners, as it would help them understand quickly many of the steps of the technique of technical writing instead of learning the hard way from long experience, which the author has shared in this book with the prospective readers.

The aim is to study the interpenetration of writing and technology in order to determine how technology has affected writing. The book is allied with a tradition of opposition to technology and to the main thrust of composition research over the last 10 years. Writing, it is concluded, is not reducible to technology because it is an activity rooted in meaning and human relations. Chapter topics cover: (1) the technology of writing; (2) common sense in communications; (3) technical writing; (4) information transfer; (5) objectivity of technical writing; (6) audience awareness; (7) use and purpose of outlines; (8) paragraph structure; and (9) computers and the techniques of writing. The IEEE Guide to Writing in the Engineering and Technical Fields - David Kmiec 2017-09-25

Helps both engineers and students improve their writing skills by learning to analyze target audience, tone, and purpose in order to effectively write technical documents This book introduces students and practicing engineers to all the components of writing in the workplace. It teaches readers how considerations of audience and purpose govern the structure of their documents within particular work settings. The IEEE Guide to Writing in the Engineering and Technical Fields is broken up into two sections: "Writing in Engineering Organizations" and "What Can You Do With Writing?" The first section helps readers approach their writing in a logical and persuasive way as well as analyze their purpose for writing. The second section demonstrates how to distinguish rhetorical situations and the generic forms to inform, train, persuade, and collaborate. The emergence of the global workplace has brought with it an increasingly important role for effective technical communication. Engineers more often need to work in cross-functional

teams with people in different disciplines, in different countries, and in different parts of the world. Engineers must know how to communicate in a rapidly evolving global environment, as both practitioners of global English and developers of technical documents. Effective communication is critical in these settings. The IEEE Guide to Writing in the Engineering and Technical Fields Addresses the increasing demand for technical writing courses geared toward engineers Allows readers to perfect their writing skills in order to present knowledge and ideas to clients, government, and general public Covers topics most important to the working engineer, and includes sample documents Includes a companion website that offers engineering documents based on real projects The IEEE Guide to Engineering Communication is a handbook developed specifically for engineers and engineering students. Using an argumentation framework, the handbook presents information about forms of engineering communication in a clear and accessible format. This book introduces both forms that are characteristic of the engineering workplace and principles of logic and rhetoric that underlie these forms. As a result, students and practicing engineers can improve their writing in any situation they encounter, because they can use these principles to analyze audience, purpose, tone, and form.
