*A Treatise on Topical Corticosteroids in Dermatology* - Koushik Lahiri 2017-08-11

This treatise aims to fill up the lacuna and to contribute significantly to the dissemination of knowledge about the indication/contraindication, mechanism of action, ethical use, side-effects and various other facets related to topical corticosteroid. Topical corticosteroids (TC) have greatly enhanced dermatologists' ability to effectively treat several difficult dermatoses. The available range of formulations and potencies allows them to flexibly treat all groups of patients, different phases of disease, and different anatomic sites. Improper/incomplete knowledge about topical corticosteroids' mechanism of action, indications, classifications, and contraindications has produced a rapid rise in the incidence of improper use of these drugs, which could potentially bring disrepute to this entire group of amazing drugs. Responsibility for disseminating proper knowledge regarding when, where, and how to use TC both to internists and patients primarily rests with dermatologists. In this regard, the benefits of rational and ethical use and the potential harm of overuse and misuse for nonmedical, especially cosmetic purposes, should be

clearly conveyed before prescribing TC.

**Pharmacology for the Health Care Professions** - Christine M. Thorp 2008-09-15

*Pharmacology for the Health Care Professions* is an accessible introduction to the pharmacology necessary for health care professionals training to be non-medical prescribers looking for an overview of the subject. The book covers the pharmacology necessary for accredited training programmes in non-medical prescribing and certification in access and supply of prescription-only medicines and will be useful as an ongoing reference for future use in practice. Opening with a general introduction to pharmacology as a science, the book goes on to explain what is meant by drugs and medicines and why pharmacology should be of relevance to health care professionals. The reader is presented with general principles of pharmacology followed by systemic pharmacology that covers the actions of important groups of drugs

in common use to treat diseases and conditions of the cardiovascular, respiratory, endocrine, musculoskeletal, skin and central nervous systems. The physiology and pathophysiology relevant to the understanding of how these drugs work is included. Finally the book explores the law in relation to the sale, supply, administration and prescription of drugs and explains what is meant by non-medical prescribing. All aspects of non-medical prescribing are considered including the use of exemptions to the Medicines Act, patient group directions, supplementary prescribing and the development of independent prescribing for nurses and pharmacists. Pharmacology is explained in simple, easy to understand terms and the book avoids any unnecessary chemistry where possible. Case studies that are of particular relevance to health care professionals are used throughout to illustrate the importance of the pharmacology major body systems and pathologies and the potential problems of adverse drug reactions and drug-drug interactions.

**Nursing the Acutely Ill Adult** - David Clarke 2017-09-16

Nurses in all areas of clinical practice must be able to recognise, assess and manage changes to a patient's condition. With a strong focus on pathophysiology, the comprehensive new edition of this essential textbook retains the case study approach that made the first edition so popular with students and educators alike. Offering further reading resources and definitions of key terms to aid learning it develops nurses' key skills such as identifying and explaining the pathophysiology of sepsis; recognising and managing hypovolaemic shock; assessment and management of cardiovascular, neurological and traumatic injury; and understanding priorities in initial stroke assessment and management, including nursing care following administration of a

thrombolytic drug. Written by contributors from a range of clinical and academic backgrounds, *Nursing the Acutely Ill Adult* is essential reading for all students within the adult branch of nursing, a comprehensive book guide to understanding the common signs and symptoms related to serious acute illness in adults. New to this Edition: - A chapter on strokes to account for the significant changes that have occurred in the management of the hyper-acute phase of stroke - A chapter on sepsis in response to feedback from students, staff and lead clinicians - Case studies revised to accommodate a wider variety of settings - Covers possible interventions for problems related to diabetes, chronic respiratory disease and renal disease

**Developing Healthcare Skills through Simulation** - Matthew Aldridge 2012-03-01

'This book provides an essential resource for educators of clinical skills who want to utilise simulation based education to provide optimal learning opportunities for their students.' Andrew Bland, University of Huddersfield 'In this book, a team of experienced authors have put together a much needed text that takes an evidence-based, practical approach to skills development.' Lauren Mawson, University of Cumbria 'A really exciting new text.' Sarah Burden, Leeds Metropolitan University Practice educators and mentors are now expected to have the skills and techniques needed to implement a 'learning skills through simulation' programme into established curricula, yet using simulation to teach - while of huge importance - requires careful and time-consuming planning. This valuable resource takes away some of that burden by providing clear, ready-made activities and guidance from leading practitioners in a range of fields, which healthcare and practice educators and mentors can use to enhance their teaching of all the essential and commonly-taught clinical and management skills and knowledge. Dedicated chapters, which all follow a defined step-by-step format, provide simulation scenarios, alongside facilitator guidance, which will help

develop confidence in the teaching of key skills such as: - Drug administration - Conflict management - Infection control - Breaking bad news - Catheter and bowel care These scenarios and accompanying guidance can be used as a framework for teaching, promoting a greater understanding of the skill being taught, and providing a risk-free opportunity for the student to practice their clinical and managerial skills and judgement.

British National Formulary (BNF) 69 - Joint Formulary Committee 2015-03-06

The authoritative guide to prescribing, dispensing and administering medicines for all healthcare professionals.

**Rethinking Cognitive Enhancement** - Ruud ter Meulen 2017-02-23

There has been much recent excitement amongst neuroscientists and ethicists about the possibility of using drugs, as well as other technologies, to enhance cognition in healthy individuals. This excitement has arisen from recent advances in neuroscientific technologies such as drugs that increase alertness and wakefulness in healthy individuals or technologies that can stimulate activity in different parts of the brain - either via the scalp or via electrodes - raising the possibility of producing cognitive and affective improvements in otherwise healthy individuals. Despite this growing interest, there are conflicting views on the ethics of cognitive enhancement. Some argue that enhancement is not only an ethical pursuit but one that we have a moral obligation to pursue. Others are more skeptical about the ethical implications and long term effects of cognitive enhancement. Some neuroscientists argue that use of stimulants as putative enhancers will lead to misuse, abuse and addiction in some users, and might have undesirable long-term consequences. This book critically explores and analyses the scientific and ethical debates surrounding cognitive enhancers. Including contributions from neuroscientists, neuropsychopharmacologists, ethicists, philosophers, public health professionals, and policy researchers,

the book offers a multidisciplinary, critical consideration of the ethics of the use of cognitive enhancers.

[A Guide to Supporting Breastfeeding for the Medical Profession](#) - Amy Brown 2019-12-05

This book is a practical guide for medical practitioners as they navigate through breastfeeding problems that occur in day-to-day practice. If mothers have a breastfeeding complication they are often directed to their GP. In complex situations, medical staff will be making decisions around what treatment plan to follow and whether a mother can keep breastfeeding. In recent years there has been growing evidence that medical professionals often advise mothers to stop breastfeeding while undergoing treatment, when in reality this was not a necessary step. In a time when breastfeeding rates are decreasing, it is important that medical professionals give accurate advice and support a mother's choice to breastfeed if the situation allows it. *A Guide to Supporting Breastfeeding for the Medical Profession* includes contributions from a wide range of medical professionals and each chapter is written with the practitioner in mind. Contributors include GPs, paediatricians, neonatologists, lactation specialists and midwives. Doctors have a vital role to play in supporting and facilitating breastfeeding, and without the appropriate knowledge they can often inadvertently sabotage it. This book will be of interest to GPs and paediatricians as well as nurse prescribers, midwives and health visitors.

[Drug Information and Literature Evaluation](#) - Marie A. Abate 2013  
A concise guide to medical literature evaluation and the provision of medication and health information.

**BNF 81 (British National Formulary) March 2021** - Joint Formulary Committee 2021-03-19

[The Top 100 Drugs](#) - Andrew Hitchings 2018-10-25

Now in its second edition, this highly successful guide to safe prescribing of the most common classes of drugs is your starting point for safe and effective practice. The first edition was a direct response to requests from students for a compendium of the 100 most important drugs in the NHS. Research led by Professor Emma Baker identified the 'top 100 drugs' by their importance and prescribing frequency. The top 100 drugs and the five most important intravenous fluids are presented using a clear, consistent layout across double-page spreads. Drugs are arranged alphabetically and also listed by organ system and clinical indication, providing multiple pathways into the information. Clinical pharmacology is discussed under the headings: common indications; mechanisms of action; important adverse effects; warnings; and important interactions. Practical prescribing is discussed under the headings: prescription; administration; communication; monitoring; and cost. A clinical tip is presented for every drug. Single-best-answer questions are provided for self-

assessment and to show how information from several drugs may be integrated.

*Essential Practical Prescribing* - Georgia Woodfield 2016-04-07

**Heterocyclic Anticancer Agents** - Bimal Krishna Banik 2022-06-21

Cancer is an incredibly diverse and difficult disease to treat, and even after decades of research there is no definitive cure. Therefore, it is highly crucial to search for novel and new organic molecules with high potency, low toxicity, and low mutagenicity with selective anticancer properties that are able to overcome frequently developed resistance to available drugs. Heterocyclic anticancer agents are an important class of drugs for cancer therapies. This book explores different heterocycles and their use as anticancer therapies. Topics covered include different heterocyclic derivatives, the impact of heterocycles on anticancer agent development, and naturally occurring heterocycles. [Structure and Health Effects of Natural Products on Diabetes](#)

Mellitus - Haixia Chen 2021-01-04

The purpose of this book is to introduce the classified chemical components of hypoglycemic compounds in natural products, summarize the recent research progress of natural products with hypoglycemic activity in the past 20 years, and provide the original analysis and development opinions of relevant scholars. Hypoglycemic compounds are to target diabetes mellitus, an important public health problem, one of four priority noncommunicable diseases (NCDs) targeted for action by world leaders. Diabetes mellitus is a common endocrine and metabolic disease, which not only causes physiological damage to patients' kidneys, cardiovascular and cerebrovascular vessels, peripheral blood vessels, nerves and eyes, but also causes mental and psychological pressure to patients. Due to the evidence that traditional medicine and natural herbal formula have advantages in treating diabetes, natural products with hypoglycemic activity have been studied extensively in recent years and have been accepted by many scholars all over the world. This book focuses on the progress on the study of the structure, hypoglycemic activities, structure-activity relationships and mechanism of a wide range of polysaccharides, flavonoids, saponins, alkaloids, terpenoids, polyphenols and other constituents. It will help students and researchers to understand current approaches and progress in the treatment of diabetes with natural products, which may also be beneficial to develop new hypoglycemic drugs.

**The Textbook of Non-Medical Prescribing** - Dilyse Nuttall  
2015-06-15

The Textbook of Non-Medical Prescribing is an easy-to-read, comprehensive overview of the essential knowledge, key issues and skills relevant to non-medical prescribing. Now fully updated and linked to the National Prescribing Centre Single Competency Framework for non-medical prescribers, with activities to help you link your continuing professional development within the competences required as a prescriber. This practical title remains

an ideal resource for all qualified health professionals to practice safe and effective non-medical prescribing. The section edition is structured around four core themes – public health, social and cultural issues, prescribing principles, and continuing professional development – which are threaded throughout the text. It also includes additional material on the importance on continuing professional development in prescribing, as well as the history and context of non-medical prescribing; ethical, legal and professional issues; effective consultations; essential pharmacology; clinical skills; prescribing for specific groups; and the role of the multidisciplinary team. The Textbook of Non-Medical Prescribing provides support to anyone studying for a prescribing qualification or looking for a refresher on the subject.

**Current Perspectives on Anti-Infective Agents** - K. Tamreihao  
2019-11-18

The volume is a comprehensive documentation on major infectious diseases from tropical countries which pose a serious threat to global healthcare programs. These include diseases such as tuberculosis, AIDS, leishmaniasis (kala-azar), elephantiasis, malaria, leprosy, various fungal disorders and emergent viral diseases. Due to the widespread use of antibiotics, there is an emergence of drug-resistant pathogens in many regions. Hence, there is a need to search for novel, cost-effective bioactive compounds that demonstrate high efficacy and low toxicity in human cells from unexplored ecosystems to combat emerging drug-resistant pathogens. Chapters of this volume focus on the pathogenesis and etiology of each of the mentioned diseases, updated WHO reports wherever applicable, conventional drugs

and their pharmacokinetics as well as new approaches to develop anti-infective agents. The authors also present a detailed report on 'superbugs' (multi-drug resistant pathogens) and new measures being taken up to eradicate them. Information about new antimicrobials (bioactive peptides and silk protein sericin) and the approaches taken by scientists and healthcare professionals for successful targeting of these molecules for human medicine. This volume is essential for general readers, healthcare professionals, researchers, and academicians actively involved in research on infectious diseases and anti-infective therapeutic drugs. [Series Introduction] Frontiers in Anti-Infective Agents is a book series that focuses on current and new antibiotics and vaccines. The series highlights the challenges faced by healthcare workers around the globe when facing epidemics caused by life-threatening pathogens along with the measures being taken to combat these challenges. The series is essential reading for all involved in infectious disease research including microbiologists, medical professionals, epidemiologists, and life science researchers.

**Urinary Tract Infection in Children and Antimicrobial Resistance Pattern** - Biswajit Batabyal 2019-01-30

Urinary tract infections (UTIs) are counted among the most

common infections in children. Most commonly, members of Enterobacteriaceae, particularly urinary pathogenic strains of Escherichia coli and Enterobacter aerogenes are the primary causative organisms of UTIs in different parts of the world. In spite of the availability and use of the antimicrobial drugs, UTIs caused by bacteria have been showing increasing trends. Antibiotics are a mainstay in the treatment of bacterial infections, though their use is a primary risk factor for the development of antibiotic resistance. Antibiotic resistance is a growing problem in paediatric urology as demonstrated by increased urinary pathogen resistance. The extensive and inappropriate use of antimicrobial agents has invariably resulted in the development of antibiotic resistance which, in recent years, has become a major problem worldwide.

*Medicines Management for Residential and Nursing Homes* - Roy C. Lilley 2006

When inspectors said thousands of care home residents were being given the wrong medication - the image of a grotty, poorly run nursing home reared its stereotypical head. How could something so simple as giving a patient their daily dose of tablets be going so wrong, so many times over?
