Economic Impact Analysis: Methodology and Applications - S. Pleeter
2012-12-06

As a result of a contract awarded by the Construction Engineering Research Laboratory, U.S. Army Corps of Engineers, and the Environmental Protection Agency, a workshop on the methodology of economic impact analysis was held at Hueston Woods State Park Lodge in Oxford, Ohio, April 13-15, 1977. Leading researchers in regional modeling were gathered to take stock of current developments in the field and to put forth new ideas and directions for research. Also attending the workshops were individuals from various governmental agencies that use regional models and economic impact statements. Preliminary versions of the papers appearing in this volume served as focal points for discussions that have hopefully continued, stimulating further thinking of the problems addressed. The objectives of the conference were not only to explore recent developments in methodology but also to expose users of economic impact analyses to a wide variety of models and applications and to acquaint academicians with the needs of users. The papers appearing in this volume represent

only a portion of the output of this workshop.

Health Impact Assessment in the United States - Catherine L. Ross 2014-03-12

A new public policy initiative is proposed, or a large-scale construction project. What is its potential impact on the health of the population? Are there adverse effects to address, health benefits to be promoted, some combination of both? A Health Impact Assessment (HIA) is a cross-disciplinary means of answering these and other complex questions, so programs, projects, or policies can be adjusted accordingly. Health Impact Assessment in the United States analyzes the goals, tools, and methods of HIA, and the competencies that are central to establishing best practices. It sets out the core principles that differentiate HIA from

environmental and similar assessments, fleshing them out with case examples from the U.S. and abroad. Details of each step of the HIA process take follow-through into account, giving readers insights into not only collecting and evaluating data, but also communicating findings effectively to decision-makers and stakeholders. The book's expert coverage includes: The importance of HIA to policy development. Introduction to public health, community planning, and health assessment. Overview of the core concepts of HIA, with illustrative examples. Step-by-step guide to conducting an HIA, from screening to evaluation. Emerging technologies shaping HIA tools and procedures. Appendices featuring sample assessment sections and other resources. The HIA has an increasingly vital place in the future of health-related policy, making Health Impact Assessment in the United States a valued manual and critical ideabook for students and practitioners in public health, public policy, urban planning, and community planning. Aaron Wernham, Director of the Health Impact Project, a collaboration of the Robert Wood Johnson Foundation and The Pew Charitable Trusts. "This book makes an important contribution to the health impact assessment field and is a great resource for practitioners, researchers and students... it helps the reader to not only understand HIA but to do it." Ben Harris-Roxas, Conjoint Lecturer, Centre for Primary Health Care and Equity, University of New South Wales; Health Section Co-Chair, International Association for Impact Assessment; Consultant, Harris-Roxas Health. Privacy Impact Assessment - David Wright 2012-01-31

Virtually all organisations collect, use, process and share personal data from their employees, customers and/or citizens. In doing so, they may be exposing themselves to risks, from threats and vulnerabilities, of that data being breached or compromised by negligent or wayward employees, hackers, the police, intelligence agencies or third-party service providers. A recent study by the Ponemon Institute found that 70 per cent of organisations surveyed had suffered a data breach in the

previous year. Privacy impact assessment is a tool, a process, a methodology to identify, assess, mitigate or avoid privacy risks and, in collaboration with stakeholders, to identify solutions. Contributors to this book – privacy commissioners, academics, consultants, practitioners, industry representatives – are among the world’s leading PIA experts. They share their experience and offer their insights to the reader in the policy and practice of PIA in Australia, Canada, New Zealand, the United Kingdom, the United States and elsewhere. This book, the first such on privacy impact assessment, will be of interest to any organisation that collects or uses personal data and, in particular, to regulators, policy-makers, privacy professionals, including privacy, security and information officials, consultants, system architects, engineers and integrators, compliance lawyers and marketing professionals. In his Foreword, surveillance studies guru Gary Marx says, “This state-of-the-art book describes the most comprehensive tool yet available for policy-makers to evaluate new personal data information technologies before they are introduced.” This book could save your organisation many thousands or even millions of euros (or dollars) and the damage to your organisation’s reputation and to the trust of employees, customers or citizens if it suffers a data breach that could have been avoided if only it had performed a privacy impact assessment before deploying a new technology, product, service or other initiative involving personal data.

Delivering High Quality Impact Assessments - Great Britain. National Audit Office 2009

Government is committed to conducting formal impact assessments of the need for and likely impact of new regulations. This National Audit Office report finds that scrutiny of proposed legislation is strengthening and that the standard is better than it was, but one fifth of assessments still do not include any quantified data to assess costs or benefits. The Better Regulation Executive (BRE) has introduced new guidance, templates and training to improve the quality of impact assessments and, as a result, impact assessments have clearer presentation of results, better planning for implementation, and more quantification of costs and benefits. But wide variation remains between the best and worst impact assessments. Where they are done well, the impact assessments include a clear statement of the policy problem, make good use of consultation and have clear recommendations. On the other hand, only 20 per cent of impact assessments presented the results of an evaluation of a range of regulatory options. Many impact assessments did not pay enough attention to compliance and enforcement issues. For example, only one third of assessments assessed the cost of enforcement for the preferred option. There have been improvements in the analysis of costs and benefits. In 2008, 67 per cent of impact assessments quantified costs and 60 per cent quantified benefits. Under the previous arrangements, the figures were 56 per cent for quantified costs and 40 per cent for quantified benefits. There is, however, still wide variation in the level of

evidence provided and insufficient analysis in the weaker impact assessments.

The European Impact Assessment and the Environment - Kilian Bizer 2010-08-03

This volume contains papers presented in a workshop of international experts in September 2008 in Berlin. The experts discussed how environmental consequences of EU legislation can be incorporated in a more effective way. In other words, this contribution focuses on the question of which measures can strengthen the consideration of environmental effects in the EU impact assessment procedure and in the subsequent legislative decision-making process. This allows drawing conclusions for the impact assessment process in Germany. This volume begins with an introductory paper (Bizer/Lechner/Führ) which served as the basis for discussion in our workshop. The questions raised in this paper are addressed by the authors of the subsequent chapters. Stephen White (DG Environment, EU-Commission) discusses the impact assessment from an internal perspective within the Commission. Pendo Maro (European Environmental Bureau) reviews the impact assessment practice from the perspective of an environmental NGO. Martin Schmidt et al. discuss the potential for more formalism to strengthen environmental issues within impact assessments and favour a checklist. [InfoWorld](#) - 1998-09-14

The Capabilities Approach on Social Order - Niels Weidtmann 2012

The Capabilities Approach, as pioneered by Martha C. Nussbaum and others, elevates the enabling of free self-development to a criterion of social justice. In recent years, it has become a widely accepted paradigm in Western development policies, and, currently, it is discussed to which extent this normative framework can be applied to other social areas. This volume presents interdisciplinary papers resulting from discussions that young scholars of different disciplines had with Martha C. Nussbaum during the Unseld Lecture 2010 at the Forum Scientiarum of

Tübingen University. (Series: Interdisciplinary Research Works at FORUM SCIENTIARUM / Interdisziplinäre Forschungsarbeiten am FORUM SCIENTIARUM - Vol. 4)

Impact Assessment in the EU - Andrea Renda 2006

The importance of ex ante and ex post impact assessment in streamlining the regulatory environment and improving the legislative process has been stressed by scholars and testified to by international best practices. The potential benefits of regulatory impact assessment are also being rediscovered by EU officials, who lose no chance to recall that the Commission's ambitious "growth and jobs" strategy heavily depends on the pervasiveness of impact assessment in the regulatory process at EU and member state level. This study, conceived for scholars and policymakers, provides an overview of the state of the art on impact assessment. It focuses on the latest developments in the United States, UK, and EU, and presents a scorecard analysis of the Commission's extended impact assessments. The author concludes with a road map for improving the transparency, efficiency, and effectiveness of the EU Integrated Impact Assessment model.
