Open Windows, Closed Doors - Dovelyn Rannveig Mendoza 2016-12-01

The Association of Southeast Asian Nations (ASEAN) has signed mutual recognition arrangements in the tourism sector and in six regulated occupations: accountancy,

architecture, dentistry, engineering, medicine, and nursing. By setting standardized rules for mutual recognition, ASEAN members have made it easier for professionals to have their qualifications recognized across the region. Although these arrangements share nearly identical objectives, not all are created equal and come with varying levels of openness to foreign professionals. This report is the latest in a project by the Asian Development Bank and the Migration Policy Institute to improve understanding of the barriers to free movement of professionals within ASEAN and to support the development of strategies to overcome these hurdles. The report draws on insights of nearly 400 ASEAN and state officials, private-sector employers, training directors, and others who participated in focus group discussions, meetings, and surveys.

You Could Be the Winner (Volume - II) - Ahmed Sayeed
2019-09-24

Truth is ever to be found in simplicity and not in multiplicity and confusion of things. I have just three things to teach or say: to the contemporary Humans that simplicity, Patience and compassion are the three building blocks of humanity. Simplicity and humanity are the ultimate sophistications of human civilization. They are the essence of happiness since great acts are made up of small deeds. All I have is a sense of duty toward all people and attachment to those with whom I have become intimate. Thus the next evolutionary step for me that mankind is to be more from man to kind. Earth provides enough to satisfy every man's need not everyman's greed. Hence I have taken up writing books to mould other beings to be humans not as savage since we Hominids were savage in early stage and now it is high time to turn out ourselves into humans. Simplicity, which is the essence of happiness, is great act of humans for doing small deeds. Right from retirement as an Audit Officer from the Office of the Principal Accountant General Audit Andhra Pradesh Hyderabad, on 01-07-2003, I studied LL.B, at the evening age of 60 to 69 years while writing certain controversial books like (i) "Human Life-A Philosophical Audit, (ii) We Think Therefore We Are", (iii) "My Mind is My Mosque" (iv) "Tears of Terrorism" (v) "After all Whose Life is It any Way?" (a book on Euthanasia) (vi) "Know your India-Open a new Page for writing Nationalism" (for India's Nationalism) (vii) Paradise Lost (a real life story of a Jihadists killing his own mother in Syria for the sake of Blessing of Paradise by the Allah) (viii) "Spicy Trade" (How India was subjected to Invasion by Arabs, Europeans and finally tampered One India into Three viz. Pakistan, India and Bangladesh, (ix) "Father Turns Monster" (real story relating to a father to save his child by killing innocent peoples and plucked their

organs like Lungs and Heart and used for Transplantation and replacement of his sons Lungs and Heart") (x) "Tridevi Trident" (story relating to three sisters killing their father who became Psycho in raping the children including themselves and this is also a real story). I normally portray in a books only facts not fiction, poetry and no fairy tails. My aim is let the decide what is fact and what fiction and develop his personality accordingly since what ever that feels, perceives, desires expressions and emotions are all the offshoots of the Brain. The meaning of life is to take birth, to grow, to feed, to develop energy, procreate children and finally to die and merge into the womb of Earth as a piece of nuclei. That is it! Hence I did not show craze for the monetary returns but only to show the people how the realm of our Society is inflamed with monetary gains. This my story in short.

Thin-walled Structures - N. E. Shanmugam 1998

Thin-plated structures are used extensively in building construction, automobile, aircraft, shipbuilding and other industries because of a number of favourable factors such as high strength-weight ratio, development of new materials and processes and the availability of efficient analytical methods. This class of structure is made by joining thin plates together at their edges and they rely for their rigidity and strength upon the tremendous stiffness and load-carrying capacity of the flat plates from which they are made. Many of the problems encountered in these structures arise because of the effects of local buckling. The knowledge of various facets of this phenomenon has increased dramatically since the 1960s. Problem areas which were hitherto either too complex for rigorous analysis or whose subtleties were not fully realized have in these years been subjected to intensive study. Great advances have been made in the areas of inelastic buckling. The growth in use of lightweight strong materials, such as fibre-reinforced plastics has also been a contributory factor towards the need for advances in the knowledge of the far post-buckling range. The conference is a sequel

to the international conference organised by the University of Strathclyde in December 1996 and this international gathering will provide the opportunity for discussion of recent developments and trends in design of thin-walled structures.

Personnel Protection and Safety Equipment for the Oil and Gas Industries - Alireza Bahadori 2015-05-21

Oil and gas companies are repeatedly cited by regulatory organizations for poor training and maintenance on providing personal protective equipment to their refinery workers. Managers of refinery and petrochemical plants are responsible for instructing their workers with the types of equipment available, how to properly wear the equipment, how to properly care and maintain the equipment, and, most importantly, it's their responsibility to enforce these regulations and safety requirements. While there are many reference materials on the subject, most are too broad to apply directly to the unique and highly volatile atmosphere of an oil and gas operation. Personnel Protection and Safety Equipment for the Oil and Gas Industries answers the call for safety managers onsite as well as workers to understand all the safety equipment available specifically for the energy sector. Condensed into one convenient reference location, this training guide is designed to inform on several types of personnel protective clothing, firefighting protective clothing, respiratory protective devices available as well as many other types of protective equipment, including fall protection and vehicle safety belts and harnesses. Industry-specific examples, multiple illustrations, and a glossary of terms make Personnel Protection and Safety Equipment for the Oil and Gas Industries a must-have on every oil and gas operation. Know recommended US and international protective safety equipment regulations Learn the types, classes, and materials of safety and protective equipment specific to the oil and gas industry Gain knowledge on how to select, test, maintain, and store protective equipment properly

This book is written by twenty-six female authors (three of whom also serve as the editors) from around the world at varying career stages who share their research, achievements, perspectives, and successes in emerging areas of systems engineering leadership. Testimonials: “As the systems that modern society depends on get more complicated and complex, we are in the midst of a renaissance with regard to research relating to systems engineering and science. A vast majority of this research is focused on the development of a modern toolkit for systems engineers today and into the future. This takes the form of new and improved methods, models,

methodology, processes and tools. This research is critical but likely insufficient without a focus on the most valuable resource with regard to systems engineering within any organization – the human resource. Therein lies the focus of this textbook. It addresses systems engineering leadership from a variety of perspectives, while also addressing broad aspects relating to mentoring and the necessary evolving competencies that we need to address in today’s workforce. This emphasis makes this book unique. The icing on the cake is that all the chapters in this textbook are written by contemporary women leaders – this provides a necessary and unique perspective on the topic of leadership – that is long overdue! I highly recommend this textbook to all my colleagues in academia, industry, and government.” Dinesh Verma, Ph.D. Professor, Systems Engineering, School of Systems and Enterprises Executive Director, Systems Engineering Research Center (SERC) Stevens Institute of Technology, Hoboken, NJ 07030 “The past decade has seen a dramatic increase in the number of women who are formally recognized in systems engineering technical, management and leadership positions in all sectors. With industry, academia, professional systems engineering societies and publishers enabling and illuminating the growing and substantial contributions of women in engineering, women have unprecedented opportunities today to contribute to systems engineering in both leadership and management positions. This volume, a compendium of chapters written by enterprising international women leaders at various stages in their career, addresses diverse topics such as leadership, management, empowerment, equity, diversity, inclusion, and mentoring. It is a valuable resource for engineering management courses in academia, systems engineering leadership training in industry, and Diversity, Equity, and Inclusion program development by Human Resource departments in industry, academia, and government.” Azad M.
