Non-Commutative Harmonic Analysis - J. Carmona 2006-11-15

Acoustics and the Performance of Music connects scientific understandings of acoustics with practical applications to musical performance. Of central importance are the tonal characteristics of musical instruments and the singing voice including detailed representations of directional characteristics. Furthermore, room acoustical concerns related to concert halls and

opera houses are considered.

Based on this, suggestions are made for musical performance.

Included are seating

arrangements within the

orchestra and adaptations of

performance techniques to the

performance environment. In

the presentation we dispense

with complicated mathematical

connections and deliberately

aim for conceptual explanations

accessible to musicians,

particularly for conductors. The

graphical representations of the

directional dependence of

sound radiation by musical

instruments and the singing

voice are unique. Since the first

edition was published in 1978,

this book has been completely

revised and rewritten to include

current research. This

translation corresponds to the

latest (fifth) German edition

(2004), which has become a

standard reference work for

audio engineers and scientists.

Acoustics and the Performance

of Music addresses issues that

are of interest to acousticians,

orchestra performers and

conductors, audio engineers,

architects. Researchers and
