**The Oxford Handbook of Engineering and Technology in the Classical World** - John Peter Oleson 2008-01-31

Nearly every aspect of daily life in the Mediterranean world and Europe during the florescence of the Greek and Roman cultures is relevant to the topics of engineering and technology. This volume highlights both the accomplishments of the ancient societies and the remaining research problems, and stimulates further progress in the history of ancient technology. The subject matter of the book is the technological framework of the Greek and Roman cultures from ca. 800 B.C. through ca. A.D. 500 in the circum-Mediterranean world and Northern Europe.

Each chapter discusses a technology or family of technologies from an analytical rather than descriptive point of view, providing a critical summation of our present knowledge of the Greek and Roman accomplishments in the technology concerned and the evolution of their technical capabilities over the chronological period. Each presentation reviews the issues and recent contributions, and defines the capacities and accomplishments of the technology in the context of the society that used it, the available "technological shelf," and the resources consumed. These studies introduce and synthesize the results of excavation or specialized studies. The chapters are organized in sections progressing from sources (written and representational) to primary (e.g., mining, metallurgy, agriculture) and secondary (e.g., woodworking, glass production, food preparation, textile production and leather-working) production, to technologies of social organization and interaction (e.g., roads, bridges, ships, harbors, warfare and fortification), and finally to studies of general social issues (e.g., writing, timekeeping, measurement, scientific instruments, attitudes toward technology and innovation) and the relevance of ethnographic methods to the study of classical technology. The unrivalled breadth and depth of this volume make it the definitive reference work for students and academics across the spectrum of classical studies.

**Time for Socialism** - Thomas Piketty 2021-10-26

A chronicle of recent events that have shaken the world, from the author of Capital in the Twenty-First Century "What makes this manifesto noteworthy is that it comes from . . . an economist who gained his reputation as a researcher with vaguely left-of-center sensibilities but was far from a radical. Yet the times are such . . . that even honest moderates are driven to radical remedies."—Robert Kuttner, New York Times As a correspondent for the French newspaper Le Monde, world-renowned economist Thomas Piketty has documented the rise and fall of Trump, the drama of Brexit, Emmanuel Macron's ascendance to the French presidency, the unfolding of a global pandemic, and much else besides, always from the perspective of his fight for a more equitable world. This collection brings together those articles and is prefaced by an extended introductory essay, in which Piketty argues that the time has

come to support an inclusive and expansive conception of socialism as a counterweight against the hypercapitalism that defines our current economic ideology. These essays offer a first draft of history from one of the world's leading economists and public figures, detailing the struggle against inequalities and tax evasion, in favor of a federalist Europe and a globalization more respectful of work and the environment.
