HR Governance - Boris Kaehler 2018-07-04
Human resource (HR) governance is a relatively new construct that has recently begun attracting more and more attention in both research and practice. As a part of corporate governance, it represents the internal and external normative framework of human resource management and its supervision in organizations. This book theoretically integrates HR governance with the related domains of corporate governance, general management, HR management, and leadership. By doing so, it provides scholars and practitioners in the field with a precisely delineated system of theoretical concepts for their work and helps to translate these concepts into concrete research questions and practical guidelines. By interpreting the new ISO 30408 norm on human governance and taking into account recent developments, the book helps to comply with and anticipate current and future HR regulations.

MANAGERIAL LEADERSHIP IN MULTICULTURAL ORGANISATIONS - KUNNETH RAMAKRISHNAN 2013-02-13

The management and managerial leadership theories of eminent management thinkers, taught in the business schools, are thought-provoking; but relevant, perhaps, only to the era and the environment of their research and development. The effectiveness of these theories needs a re-assessment of their universal application in the globalised environment of the current era. To put it differently, traditional leadership styles of managers are being put to test in a culturally complex environment. The objective of this book is to evolve an effective managerial leadership to match the demands of the multicultural organisations, through a down-to-earth tangible and practical approach. Unifying the diverse categories of employees with different value systems, attitudes, lifestyles, behaviour patterns and linguistic abilities, is a complex and inescapable challenge to the managerial leadership. What we fail to notice is the significance of the power of positive managerial leadership-what is appropriate and what is outdated. The book contains

numerous absolutely progressive and innovative concepts, methods and approaches which could help reorient managerial leadership behaviour of global managers and re-architect the organisations to which they belong. The author has undertaken detailed analysis of some of the important management theories taught in business schools, including their strengths and weaknesses. The book clarifies, conceptualises and recommends significant aspects of institutionalised positive managerial leadership in organisations. The important milestones are influence of culture on employee behaviour, positive organisational culture, profile of positive managerial leadership, their changing motivational roles, organisational assimilations of multicultural employees, new approach to employee welfare and some suggestions to evolve a future-ready achievable dream organisation. The following fresh concepts have been integrated with the discussion in the book: • Environmental Energy Effects (3Es); and their effects on organisational culture. • Emotional Environmental Energy Effects (E3Es) and their influence on interpersonal relationships. • Therapy for Quality of Life (TQL), a well-researched concept for actualising and operationalising the manager's concern for employees and their families. • Managing by Influence, a wholesome method of motivating and leading employees for raising their performance standard and dynamically contributing to their organisation. This book responds to the dynamic issues confronting the existing and emerging work culture in the corporate world. It is an ideal source for the management students, engineering students and the practising managers to gain a solid understanding of complex problems of modern managerial leadership, the subject matter of this book.

The Cambridge World History of Violence: Volume 2, AD 500-AD 1500 - Matthew Gordon 2020-03-31

Violence permeated much of social life across the vast geographical space of the European, Asian, and Islamic worlds and through the broad sweep of what is often termed the Middle Millennium (roughly 500 to 1500). Focusing on four contexts in which violence occurred across this huge area, the contributors to this volume explore the formation of centralized polities through war and conquest; institution building and ideological expression by these same polities; control of extensive trade networks; and the emergence and dominance of religious ecumenes. Attention is also given to the idea of how theories of violence are relevant to the specific historical circumstances discussed in the volume's chapters. A final section on the depiction of violence, both visual and literary, demonstrates the ubiquity of societal efforts to confront meanings of violence during this *longue durée*.

Almost every text/course is organized around the four functions of management: planning, leading, organizing, and controlling (PLOC). What makes the texts different are their approach to the subject (principles vs. OB focused) and their strengths of coverage (high/strategic vs. low level/applied/skills). The Principles of Scientific Management - Frederick Winslow Taylor 2016-03-10

It seems, at first glance, like an obvious step to take to improve industrial productivity: one should simply watch workers at work in order to learn how they actually do their jobs. But American engineer FREDERICK WINSLOW TAYLOR (1856-1915) broke new ground with this 1919 essay, in which he applied the rigors of scientific observation to such labor as shoveling and bricklayer in order to streamline their work... and bring a sense of logic and practicality to the management of that work. This highly influential book, must-reading for anyone seeking to understand modern management practices, puts lie to such misconceptions that making industrial processes more efficient increases unemployment and that shorter workdays decrease productivity. And it laid the foundations for the discipline of management to be studied, taught, and applied with methodical precision.

Managerial and Entrepreneurial Decision Making - Matteo Cristofaro 2021-06-10

Since the conceptualization of bounded rationality, management scholars started investigating how people—managers and entrepreneurs—really

make decisions within (and for) organizations. The aim of this eBook is to deeply investigate trends that have flourished within this pivotal research area in conceptual and/or empirical terms, trying to provide new insights on how managers and entrepreneurs make decisions within and for organizations. In this vein, readers that approach this eBook will be taken by hand and accompanied to the discovery of how the mind of decision makers is at the basis of organizational developments or failures. In this regard, published contributions in this eBook underline how executives and entrepreneurs must be ecologically rational, thus be aware of the negative and positive effects that biases can have depending on the context and use them at their advantage. Managerial and entrepreneurial decision-making are phenomena that cannot be detached from the environment in which executives and entrepreneurs are embedded, claiming to establish new approaches to research that looks at decision-making as an individual/group/organization-environment dialectical and multi-level phenomenon.

Managerial and Organizational Cognition - Colin Eden 1998-03-19

Interest in the field of managerial and organizational cognition has been intense over the last few years. This book explores and provides an in-depth overview of the latest developments in the area and presents answers to the questions accompanying its growth: Is the field distinctive? How does it extend our understanding of managerial processes? From different disciplinary perspectives and empirical settings, the contributors study patterns of managerial cognition. In particular, the longitudinal approach reflected in the volume contributes to its impact as a grounded, practice-based analysis of cognition in organizations.
