**Drive models for steam engines and hot air engines** - Volker Koch

Many modellers – especially beginners – ask themselves when the first steam engine or hot-air engine model is finished and working: and now?

After all, such machines were originally intended to do work and enable mechanical activities. Early on, the suppliers of toy steam engines therefore came up with the idea of producing drive models in which the engines could deliver their power in a meaningful way. But many of these suppliers no longer exist, many machines are only available in antiquarian form and the supply of finished drive models is limited – and besides, making your own is much more exciting anyway! This is also the opinion of Volker Koch, who describes in this book numerous self-built propulsion machines of the most diverse types – for the most part based on historical models – and how to build them himself. With simple means – mostly from the scrap box – and little use of machinery, small works of art are created here that make the operation of steam engines and hot-air engines even more interesting. Sketches of the various models help to find the right dimensions and to achieve a successful result. From the content: • General remarks about drive models • Use of tools • Materials • Sources of supply • Working techniques for building operating and other functional models • Replica of a Doll/Fleischmann forge • Reconstruction of a drive model "Man at the grindstone" based on a Fleischmann model • Man at the well • The "wood sawyer" • Simple windmill • Hammer mill • Transmission • Blacksmith of own design • Scissor grinder with spraying spark

Building a Portable Steam Engine - Tony Webster 2014-11-30

This practical, instructional book describes the construction of a model of the Lampitt portable steam engine, which dates back to 1862, and which provided rotative power to drive threshing machines, circular saws, feed mills and other farm machinery. The construction of every component is described in precise detail and the text is supported by many helpful step-by-step photographs. In

addition, useful advice is provided about obtaining materials and about the tools that are required to equip a model-engineering workshop. Accordingly, ~~The Model Locomotive Building in this fast and useful book will enable the reader to read with notes, index, and the Engineering by D. G. Gilson and R. H. Hothers engineering models in the future. When the reader has finished building 'the Lampitt' he will, in effect, have completed an engineering apprenticeship, and will have a model engine of which he can be proud and which fully reveals the skills that he has learned. Fully illustrated with 142 step-by-step colour photographs.~~
