Swinging and Rolling - Jochen Büttner 2019-08-08

This volume explores the reorganisation of knowledge taking place in the course of Galileo's research process extending over a period of more than thirty years, pursued within a network of exchanges with his contemporaries, and documented by a vast collection of research notes. It has revealed the challenging objects that motivated and shaped Galileo's thinking and closely followed the knowledge reorganization engendered by theses challenges. It has thus turned out, for example, that the problem of reducing the properties of pendulum motion to the laws governing naturally accelerated motion on inclined planes was the mainspring for the formation of Galileo's

comprehensive theory of naturally accelerated motion.

Ner Elohim - Candle of God - Abraham Abulafia 2018

In 'Ner Elohim', Abulafia lays down the foundations of his entire system of prophetic Kabbalah. It begins with an interpretation of the Blessing of the Priests, where Abulafia explains that the effect of the blessing depends on the knowledge of holy names, their composition, and their function. This leads him to describe the basic principles behind the workings of holy names and letter combinations, as outlined in the fundamental kabbalistic text of Sefer Yetzirah, since 'formation cannot exist without the combination of letters'

**The Cult of Silvanus** - Peter F. Dorsey 1992

One of the few studies that deals with Roman domestic religion as practised by the lower classes. The author collects and analyzes the enormous epigraphic and archaeological evidence for Silvanus, The Roman god of agriculture and forests, challenging the widely-held view that private cult was subordinate or inferior to civic paganism.

*Tacky* - Rax King 2021-11-02

An irreverent and charming collection of deeply personal essays about the joys of low pop culture and bad taste, exploring coming of age in the 2000s in the age of Hot Topic, Creed, and frosted lip gloss—from the James

Beard Award-nominated writer of the Catapult column "Store-Bought Is Fine" Tacky is about the power of pop culture—like any art—to imprint itself on our lives and shape our experiences, no matter one's commitment to "good" taste. These fourteen essays are a nostalgia-soaked antidote to the millennial generation's obsession with irony, putting the aesthetics we hate to love—snakeskin pants, Sex and the City, Cheesecake Factory's gargantuan menu—into kinder and sharper perspective. Each essay revolves around a different maligned (and yet, Rax would argue, vital) cultural artifact, providing thoughtful, even romantic meditations on desire, love, and the power of nostalgia. An essay about the gym-tan-laundry exuberance of Jersey Shore morphs into an excavation of grief over the death of her father; in "You Wanna Be On Top," Rax writes about friendship and early aughts girlhood; in another, Guy Fieri helps her heal from an abusive relationship. The result is a collection that captures the personal and generational experience of finding joy in caring just a little too much with clarity, heartfelt honesty, and Rax King's trademark humor. **Advanced Air Pollution** - Farhad Nejadkoorki 2011-08-17  
Leading air quality professionals describe different aspects of air pollution. The book presents information on four broad areas of interest in the air pollution field; the air pollution monitoring; air quality modeling; the GIS techniques to manage air quality; the new approaches to manage air quality. This book fulfills the need on the latest concepts of air pollution science and provides comprehensive information on all relevant components relating to air pollution issues in urban areas and industries.

The book is suitable for a variety of scientists who wish to follow application of the theory in practice in air pollution. Known for its broad case studies, the book emphasizes an insightful of the connection between sources and control of air pollution, rather than being a simple manual on the subject.

**Alternative Propulsion for Automobiles** - Cornel Stan 2016-08-05  
The book presents – based on the most recent research and development results worldwide - the perspectives of new propulsion concepts such as electric cars with batteries and fuel cells, and furthermore plug in hybrids with conventional and alternative fuels. The propulsion concepts are evaluated based on specific power, torque characteristic, acceleration behaviour, specific fuel consumption and pollutant emissions. The alternative fuels are discussed in terms of availability, production, technical complexity of the storage on board, costs, safety and infrastructure. The book presents summarized data about vehicles with electric and hybrid propulsion. The propulsion of future cars will be marked by diversity – from compact electric city cars and range extender vehicles for suburban and rural areas up to hybrid or plug in SUV s, Pick up s and luxury class automobiles.

**Artificial Intelligence and Machine Learning for COVID-19** - Fadi Al-Turjman 2021-02-17  
This book is dedicated to addressing the major challenges in fighting COVID-19 using artificial intelligence (AI) and machine learning (ML) – from cost and complexity to availability and accuracy. The aim of this book is to focus on both the design and implementation of AI-based approaches in proposed COVID-19 solutions that are enabled and supported by sensor

networks, cloud computing, and 5G and beyond. This book presents research that contributes to the application of ML techniques to the problem of computer communication-assisted diagnosis of COVID-19 and similar diseases. The authors present the latest theoretical developments, real-world applications, and future perspectives on this topic. This book brings together a broad multidisciplinary community, aiming to integrate ideas, theories, models, and techniques from across different disciplines on intelligent solutions/systems, and to inform how cognitive systems in Next Generation Networks (NGN) should be designed, developed, and evaluated while exchanging and processing critical health information. Targeted readers are from varying disciplines who are interested in implementing the smart planet/environments vision via wireless/wired enabling technologies.

**Overarching Greek Trends in European Philosophy** - Marco Antonio Coronel Ramos 2021-08-16

This book is an enquiry into memory in the Western world. Specifically, memory is the framework of culture,

because it links the present to the past - or tradition - and projects it into the future. For this reason, any work focusing on memory involves a double challenge: (1) to reveal the origin of concepts and (2) to glimpse the course of thoughts. This is the case of the present volume, in which the authors make several tastings of Europe's intellectual heritage, by taking into account both the Greek origin of this legacy and its relevance for understanding the European philosophical heritage. In particular, these papers focus on the Aristotelian tradition, the true keystone of Europe, and on other currents of thought that have also played an essential role in the intellectual evolution of the Old Continent. In the latter field, there are contributions, for instance, on philosophical-religious traditions such as Orphism or on certain fundamental aspects of Neoplatonism both in the Classical World and in Christian authors. The volume concludes with various works on the survival of these intellectual trends from the Renaissance to the present day. Consequently, this work offers the opportunity to delve deeper into some of the aspects that define Western civilisation, observed both from its origin and its evolution over the centuries. The volume contains papers in Spanish, Portuguese, Italian, and English. Este libro es una indagación en la memoria del mundo occidental. Específicamente, la memoria es el armazón de la cultura, porque liga el presente al pasado –o tradición– y lo proyecta al futuro. Por ello, toda obra centrada en la memoria entraña un doble reto: (1) revelar el origen de los conceptos y (2) atisbar el rumbo de los pensamientos. Este es el caso del presente volumen, en el que realizan diversas catas en el patrimonio intelectual europeo. Lo

hace teniendo en cuenta tanto el origen griego de ese legado como su relevancia para comprender el acervo filosófico europeo. En concreto, se centra en la tradición aristotélica, verdadera clave de bóveda de Europa, y en otras corrientes de pensamiento que también han jugado un papel esencial en la evolución intelectual del viejo continente. En éste último ámbito hay contribuciones, por ejemplo, sobre tradiciones filosófico-religiosas como el orfismo o sobre determinados aspectos fundamentales del neoplatonismo en el mundo clásico y en autores cristianos. Concluye el volumen con diversos trabajos sobre la pervivencia de esas tendencias intelectuales desde el renacimiento hasta nuestros días. En consecuencia, esta obra ofrece la oportunidad de profundizar en algunos aspectos que definen nuestra civilización, observados tanto desde su origen como desde su evolución a lo largo de los siglos.

Malavika and Agnimitra - Kali dasa, 2009-10-31

Its frivolous subject may have been the reason why Malavika and Agnimitra is sometimes considered to be the least significant of the three dramas of Kali dasa, the poet laureate of Indian antiquity who probably lived in the fifth century CE. Yet the play's lively and playful plot more than makes up for its lack of deities, heroic prowess and pathos. The machinations of King Agnimitra's jester to help him add a

dancing girl to his harem in spite of the subtle intrigues of the two jealous queens carry the gallant hero through hope and despair to the happy ending.

**The Botany and Chemistry of Hallucinogens** - Richard Evans Schultes 1980

By Richard Evans Schultes, Harvard University, Cambridge, Massachusetts, and Albert Hofmann, Basel, Switzerland. With Forewords by I. Newton Kugelmass and Henrich Kluver. The Second Edition of this book

encompasses all of the advances that have been made in this field since publication of the original text. Newly discovered hallucinogenic plants have been incorporated into the discussions along with new information on some well-known drugs. The authors continue to focus on the botany and chemistry of hallucinogens, although they also consider ethnobotanical, historical, pharmacological and psychological aspects. Initial chapters delineate definition, botanical distribution, and structural types of hallucinogenic plants. Plants of known, possible and dubious hallucinogenic potential are then covered in separate sections. The bibliography for this new edition has been enlarged to accommodate all of the recent activity in botanical and chemical investigation of psychoactive plants. Readers will also appreciate the excellent illustrations that accompany the text.

Electric Field Analysis - Sivaji Chakravorti 2017-12-19  
Electric Field Analysis is both a student-friendly textbook and a valuable tool for engineers and physicists engaged in the design work of high-voltage insulation systems. The text begins by introducing the physical and mathematical fundamentals of electric fields, presenting problems from power and dielectric engineering to show how the theories are put into practice. The book then describes various techniques for electric field analysis and their significance in the validation of numerically computed results, as well as: Discusses finite difference, finite element, charge simulation, and

surface charge simulation methods for the numerical computation of electric fields Provides case studies for electric field distribution in a cable termination, around a post insulator, in a condenser bushing, and around a gas-insulated substation (GIS) spacer Explores numerical field calculation for electric field optimization, demonstrating contour correction and examining the application of artificial neural networks Explains how high-voltage field optimization studies are carried out to meet the desired engineering needs Electric Field Analysis is accompanied by an easy-to-use yet comprehensive software for electric field computation. The software, along with a wealth of supporting content, is available for download with qualifying course adoption.

*The Masters of Truth in Archaic Greece* - Marcel Detienne 1999  
The acclaimed French classicist Marcel Detienne's first book traces the odyssey of "truth," aletheia, from mytho-religious concept to philosophical thought in archaic Greece. Detienne begins by examining how truth in Greek literature first emerges as an enigma. He then looks at the movement from a religious to a secular thinking about truth in the speech of the sophists and orators. His study culminates with an original interpretation of Parmenides' poem on Being.
