*Hammath Tiberias: Early synagogues and the Hellenistic and Roman remains* - Moshe Dothan 1983

*Handbook of Parenting* - Marc H. Bornstein 2012-08-01  
Completely revised and expanded from four to five volumes, this new edition of the Handbook of Parenting appears at a time that is momentous in the history of parenting. Parenting and the family are today in a greater state of flux, question, and redefinition than perhaps ever before. We are witnessing the emergence of striking permutations on the theme of parenting: blended families, lesbian and gay parents, and teen versus fifties first-time moms and dads. One cannot but be awed on the biological front by technology that now not only renders postmenopausal women capable of childbearing, but also presents us with the possibility of designing babies. Similarly on the sociological front, single parenthood is a modern day fact of life, adult child dependency is on the rise, and parents are ever less certain of their own roles, even in the face of rising environmental and institutional demands that they take increasing responsibility for their offspring. The Handbook of Parenting concerns itself with: \*different types of parents--mothers and fathers, single, adolescent, and adoptive parents; \*basic characteristics of parenting--behaviors, knowledge, beliefs, and expectations about parenting; \*forces that shape parenting--evolution, genetics, biology, employment, social class, culture, environment, and history; \*problems faced by parents--handicap, marital difficulties, drug addiction; and \*practical concerns of parenting--how to promote children's health, foster social adjustment and cognitive competence, and interact with school, legal, and public officials. Contributors to the Handbook of Parenting have worked in different ways toward understanding all these diverse aspects of parenting, and all look to the most recent research and

thinking in the field to shed light on many topics every parent wonders about. Each chapter addresses a different but central topic in parenting; each is rooted in current thinking and theory, as well as classical and modern research in that topic; each has been written to be read and absorbed in a single sitting. In addition, each chapter follows a standard organization, including an introduction to the chapter as a whole, followed by historical considerations of the topic, a discussion of central issues and theory, a review of classical and modern research, forecasts of future directions of theory and research, and a set of conclusions. Of course, contributors' own convictions and research are considered, but contributions to this new edition present all major points of view and central lines of inquiry and interpret them broadly. The Handbook of Parenting is intended to be both comprehensive and state of the art. As the expanded scope of this second edition amply shows, parenting is naturally and closely allied with many other fields.

*Operations Research* - Wayne L. Winston 1987

*Handbook of Parenting* - Marc H. Bornstein 2005-02-16  
Despite the fact that most people become parents and everyone who has ever lived has had parents, parenting remains a mystifying subject about which almost everyone has opinions, but about which few people agree. Striking permutations on the theme of parenting are emerging--single parenthood, blended families, lesbian and gay parents, and teen versus fifties first-time moms and dads. Divided into four volumes, the Handbook of Parenting is concerned with different types of parents, basic characteristics of parenting, forces that shape parenting, problems faced by parents, and the practical sides of parenting. Contributors have worked in different ways toward understanding all of these diverse aspects of parenting and look to the most recent research and thinking in the field to shed light on many topics every parent has wondered about. Because development is too subtle, dynamic, and intricate to admit that parental caregiving alone determines the course and outcome of ontogeny, volume 1 concerns how children influence parenting. Volume 2 relates parenting to its biological roots and sets parenting in its

ecological framework. Volume 3 distinguishes among the cast of characters responsible for parenting and is revealing of the psychological make-ups and social interests of those individuals. Volume 4 describes problems of parenting as well as the promotion of positive parenting practices. Written to be read and absorbed in a single sitting, each chapter addresses a different but central topic in parenting, and is rooted in current thinking and theory as well as classic and modern research on that topic. All chapters follow a standard organization including an introduction to the chapter as a whole followed by historical considerations of the topic, a discussion of central issues and theory, a review of classic and modern research, forecasts of future directions for theory and research, and a conclusion. In addition to considering their own convictions and research, the chapter contributors present and broadly interpret all major points of view and central lines of inquiry.

**Unpacking Fractions** - Monica Neagoy 2017-03-10

For years, the teaching and learning of fractions has been associated with rote memorization. But this mechanical approach to instruction—which strips students of an ability to reason or make sense of math—has resulted in a failure of understanding. Author Monica Neagoy, drawing on decades of research studies, evidence from teacher practice, and 25 years of experience working around the world with teachers, students, and parents, addresses seven big ideas in the teaching and learning of fractions in grades 2–6. Each idea is supported by a vignette from a real classroom, common misconceptions, a thorough unpacking of productive mathematical thinking, and several multistep and thought-provoking problems for teachers to explore. She offers three fundamental reasons why it's imperative for

us to take a closer look at how we teach fractions: 1. Fractions play a key role in students' feelings about mathematics. 2. Fractions are fundamental to school math and daily life. 3. Fractions are foundational to success in algebra. While a solid grounding in algebra is necessary for a STEM career, the worthy goal of "algebra for all" will not be possible until "fractions for all" is a reality. Unpacking Fractions provides teachers with concrete strategies for achieving that reality—in short, helping all students gain the knowledge they need to feel at ease with fractions.

**The High/Scope Perry Preschool Project** - Greg Parks 2000

**Psychological Tools** - Alex Kozulin 1998

The concept of "psychological tools" is a cornerstone of L. S. Vygotsky's sociocultural theory of cognitive development. Psychological tools are the symbolic cultural artifacts--signs, symbols, texts, formulae, and most fundamentally, language--that enable us to master psychological functions like memory, perception, and attention in ways appropriate to our cultures. In this lucid book, Alex Kozulin argues that the concept offers a useful way to analyze cross-cultural differences in thought and to develop practical strategies for educating immigrant children from widely different cultures. Kozulin begins by offering an overview of Vygotsky's theory, which argues that consciousness arises from communication as civilization transforms "natural" psychological functions into "cultural" ones. He also compares sociocultural theory to other innovative approaches to learning, cognitive education in particular. And in a vivid case study, the author describes his work with recent Ethiopian immigrants to Israel, whose traditional modes of learning were oral and imitative, and who consequently proved to be quick at learning conversational Hebrew, but who struggled with the reading, writing, and formal problem solving required by a Western classroom. Last, Kozulin develops Vygotsky's concept of psychological tools to promote literature as a useful tool in cognitive development. With its explication of Vygotsky's theory, its case study of sociocultural pedagogy, and its suggested use of literary text for cognitive development, "Psychological Tools" will be of considerable interest to research psychologists and educators alike.

**Private Speech** - Rafael M. Diaz 2014-02-04

Since the publication of Vygotsky's *Thought and Language* in the United States, a number of North American and European investigators have conducted systematic observations of children's spontaneous private speech, giving substantial support to Vygotsky's major hypotheses -- particularly those regarding the social origins of higher psychological functions. However, there still remain many vital questions about the origins, significance, and functions of private speech: How can social and private speech be validly differentiated? What kinds of social interactions promote the use of private speech? What are the sources of individual differences in the use of private speech? This unique volume addresses these and many other important questions. Characterized by a strong emphasis on original data, it reports on systematic observations of spontaneous private speech in children and adults in both laboratory and naturalistic settings. In addition to its systematic analysis of common methodological problems in the field, the book contains the most comprehensive bibliography of the private speech literature currently available.

Retailing Management - Michael Levy 2014-03

Vygotsky's Educational Theory in Cultural Context - Alex Kozulin 2003-09-15

This 2003 book comprehensively covers all major topics of Vygotskian educational theory and its classroom applications. Particular attention is paid to the Vygotskian idea of child development as a consequence rather than premise of learning experiences. Such a reversal allows for new interpretations of the relationships between cognitive development and education at different junctures of the human life span.

It also opens new perspectives on atypical development, learning disabilities, and assessment of children's learning potential. Classroom applications of Vygotskian theory are discussed in the book. Teacher training and the changing role of a teacher in a sociocultural classroom is discussed in addition to the issues of teaching and learning activities and peer interactions. Relevant research findings from the US, Western Europe, and Russia are brought together to clarify the possible new applications of Vygotskian ideas in different disciplinary areas.

**Agents of Repression** - Ward Churchill 2002

For those wondering how Bill Clinton could pardon white-collar fugitive Marc Rich but not Native American leader Leonard Peltier, important clues can be found in this classic study of the FBI's COINTELPRO (Counterintelligence Program). *Agents of Repression* includes an incisive historical account of the FBI siege of Wounded Knee, and reveals the viciousness of COINTELPRO campaigns targeting the Black Liberation movement. The authors' new introduction examines the legacies of the Panthers and AIM, and shows how the FBI still presents a threat to those committed to fundamental social change. Ward Churchill is author of *From a Native Son*. Jim Vander Wall is co-author of *The COINTELPRO Papers: Documents from the FBI's Secret Wars Against Dissent in the United States*, with Ward Churchill.

*Funds of Knowledge* - Norma Gonzalez 2006-04-21

The concept of "funds of knowledge" is based on a simple premise: people are competent and have knowledge, and their life experiences have given them that knowledge. The claim in this book is that first-hand research experiences with families allow one to document this competence and knowledge, and that such engagement provides many possibilities for positive pedagogical actions. Drawing from both Vygotskian and neo-sociocultural perspectives in designing a methodology that views the everyday practices of language and action as constructing knowledge, the funds of knowledge approach facilitates a systematic and powerful way to represent communities in terms of the resources they possess and how to harness them for classroom teaching. This book accomplishes three objectives: It gives readers the basic methodology and techniques followed in the contributors' funds of knowledge research; it extends the boundaries of what these researchers have done; and it explores the applications to classroom practice that can result from teachers knowing the communities in which they work. In a time when national educational discourses focus on system reform and wholesale replicability across school sites, this book offers a counter-perspective stating that instruction must be linked to students' lives, and that details of effective pedagogy should be linked to local histories and community contexts. This approach should not be confused with parent participation programs, although that is often a fortuitous consequence of the work described. It is also not an attempt to teach parents "how to do school" although that could certainly be an outcome if the parents so desired. Instead, the funds of knowledge approach attempts to accomplish something that may be even more challenging: to alter the perceptions of working-class or poor communities by viewing their households primarily in terms of their strengths and resources, their defining pedagogical characteristics. *Funds of Knowledge: Theorizing Practices in Households, Communities, and Classrooms* is a critically important

volume for all teachers and teachers-to-be, and for researchers and graduate students of language, culture, and education.

**Just a Couple of Chickens** - Corinne Tippett 2009

"Just A Couple of Chickens" is a genuinely enjoyable read. Laugh out loud funny, informative and utterly timely. It is a poignant and very real story of one family's poultry raising adventure during a five-year crucible of economic and identity crisis that took on national relevance when their contracting business collapsed under the first wave of the economic crash in 2008. Their story hits home with heart-breaking reality. While getting a couple of chickens may have been Andrew's idea, Corinne was the one who took it over the top with thirty fluffy pheasant, five and twenty chickens, over forty Chukar, and fifteen ducklings. There were also twelve smelly quail, nine girl geese, two roosters, and a partridge in a pine tree. They were farming by Internet on a two-acre parcel near Santa Fe, New Mexico, scrabbling through the canyon that separates knowledge and experience when it comes to raising poultry. Corinne created [www.TheFeatheredEgg.com](http://www.TheFeatheredEgg.com) a web-based business that arose like a phoenix from the eggs and feathers from the flock. She approaches her role as mother, wife, and businessman with a unique perspective that she captures with droll clarity and good humor. Chicken farming was only the most recent use of her BA in Industrial/Scientific Photography from the Brooks Institute of Photography. This book is yet another, featuring her portraits of the family's feathered friends.

*Pedagogical Translanguaging* - Jasone Cenoz 2022-01-31  
Learning through the medium of a second or additional language is becoming very common in different parts of the world because of the increasing use of English as the language of instruction and the mobility of populations. This situation demands a specific approach that considers multilingualism as its core. Pedagogical translanguaging is a theoretical and instructional approach that aims at improving language and content competences in school contexts by using resources from the learner's whole linguistic repertoire. Pedagogical translanguaging is learner-centred and endorses the support and development of all the languages used by learners. It fosters the development of metalinguistic awareness by softening of boundaries between languages when learning languages and content. This Element looks at the way pedagogical translanguaging can be applied in language and content classes and how it can be valuable for the protection and promotion of minority languages. This title is also available as Open Access on Cambridge Core.

**Global Crisis, Local Voices** - Gabriele Piazza 2019-04-01

In an interconnected and globalized world, the voices of the local communities struggle to make themselves heard on the international stage. But many issues that arise within international relations have consequences for ordinary lives and are therefore closely connected. Climate change, warfare and migration are all examples of this. They are often discussed in abstract terms with relation to international diplomacy, but threaten the actual livelihoods of small communities and ordinary people. This was the setting of the conference 'Global Crisis, Local Voices', held in May 2018. This journal is a compilation of the papers presented at that conference, which was the second 'DEN International Student Conference'. The conference and this publication is one of the many projects that the Democratic Education Network (DEN) is responsible for since its launch in 2016. This book is a collection of diverse works, all written by student authors from a range of different universities. From Democracy and Ideology, to Climate Change and China, it covers numerous concepts, ideas and geographical regions, that are often found in the studies of Politics and International Relations. This book is the result of passion and hard work from all students involved in its production and it is a project that we in DEN are incredibly proud of and hope to continue in the future. "I encourage you to read these publications to catalyse views in you that stimulate great debate that helps you become part of the compassionate, progressive and responsible movement of young people that will help overcome injustices in the world and make the world a better place."
