the picometer scale. One picometer is the length of a trillionth of a meter. Compared to a human cell of typically ten microns, this is roughly ten million times smaller. In this state-of-the-art book, international scientists and researchers at the forefront of the field present the materials and methods used at the picoscale. They address the key challenges in developing new instrumentation and techniques to visualize and measure structures at this sub-nanometer level. With numerous figures, the book will help you: Understand how picoscience is an extension of nanoscience Determine which experimental technique to use in your research Connect basic studies to the development of next-generation piezoelectronic devices The book covers various approaches for detecting, characterizing, and imaging at the picoscale. It then presents picoscale methods ranging from scanning tunneling microscopy (STM) to spectroscopic approaches at sub-nanometer

spatial and energy resolutions. It also covers novel picoscale structures and picometer positioning systems. The book concludes with picoscale device applications, including single molecule electronics and optical computers.

Introductions in each chapter explain basic concepts, define technical terms, and give context to the main material.

Forgiveness - Mark Sakamoto 2014-06-03

#1 NATIONAL BESTSELLER  
When the Second World War broke out, Ralph MacLean chose to escape his troubled

life on the Magdalen Islands in eastern Canada and volunteer to serve his country overseas. Meanwhile, in Vancouver, Mitsue Sakamoto saw her family and her stable community torn apart after the Japanese attack on Pearl Harbor. Like many young Canadian soldiers, Ralph was captured by the Japanese army. He would spend the war in prison camps, enduring pestilence, beatings and starvation, as well as a journey by hell ship to Japan to perform slave labour, while around him his friends and countrymen perished. Back in Canada, Mitsue and her family were expelled from their home by the government and forced to spend years eking out an existence in rural Alberta, working other people's land for a dollar a day. By the end of the war, Ralph emerged broken but a survivor. Mitsue, worn down by years of back-breaking labour, had to start all over again in Medicine Hat, Alberta. A generation later, at a high school dance, Ralph's daughter and Mitsue's son fell

in love. Although the war toyed with Ralph's and Mitsue's lives and threatened to erase their humanity, these two brave individuals somehow surmounted enormous transgressions and learned to forgive. Without this forgiveness, their grandson Mark Sakamoto would never have come to be.

**The Singapore Mathematics Calendar 2020** - Yan Kow Cheong

The Singapore Mathematics Calendar is a three-book series that provides an informal yet creative way for both parents and homeschoolers to support their child succeed in math. This calendar is designed in such a way that the answer to the problem on each day is the date on which the problem appears. Hints and solutions are also provided for nonroutine or brain-unfriendly questions. Besides, each month

begins with some elements of enrichment or recreational math. The Singapore Mathematics Calendar Series aims to convey the message that mathematics needn't be drill-and-kill exercises—it can be fun, yet challenging for students to be exposed to the beauty and joy of mathematics.

self-assemblies from the micro- to the nanoscale. Planar lipid bilayers are widely studied due to their ubiquity in nature and find their application in the formulation of biomimetic model membranes and in the design of artificial dispersion of liposomes. Moreover, lipids self-assemble into a wide range of other structures including micelles and the liquid crystalline hexagonal and cubic phases. Consensus has been reached that curved membrane phases do play an important role in nature as well, especially in dynamic processes such as vesicles fusion and cell communication. Self-assembled lipid structures have enormous potential as dynamic materials ranging from artificial lipid membranes to cell membranes, from biosensing to controlled drug delivery, from pharmaceutical formulations to novel food products to mention a few. An assortment of chapters in this volume represents both original research as well as comprehensive reviews written by world leading experts and

young researchers. Surveys recent theoretical and experimental results on lipid micro- and nanostructures Presents potential uses of applications like clinically relevant diagnostic and therapeutic procedures, biotechnology, pharmaceutical engineering, and food products Provides both original research as well as comprehensive reviews written by world leading experts and young researchers Provides a global platform for a broad community of experimental and theoretical researchers studying cell membranes, lipid model membranes, and lipid self-assemblies from the micro- to the nanoscale.

*Advances in Intelligent Networking and Collaborative Systems* - Fatos Xhafa

networks and collaborative systems, intelligent networking systems, mobile collaborative systems and secure intelligent cloud systems. It also presents the synergies among various paradigms in such a multi-disciplinary field of intelligent collaborative systems. With the rapid development of the Internet, we are experiencing a shift from the traditional sharing of information and applications as the main purpose of the Web to an emergent paradigm, which locates people at the very centre of networks and exploits the value of individuals' connections, relations and collaboration. Social networks are also playing a major role in the dynamics and structure of intelligent Web-based networking and collaborative systems. Virtual campuses, virtual communities and organizations strongly leverage intelligent networking and collaborative systems by means of a great variety of formal and informal electronic relations, such as business-to-business, peer-to-peer and various types

of online collaborative learning interactions, including the emerging e-learning systems. This has resulted in entangled systems that need to be managed efficiently and autonomously. In addition, the latest, powerful technologies based on grid and wireless infrastructure as well as cloud computing are currently enhancing collaborative and networking applications significantly, but are also facing new issues and challenges. The principal purpose of the research and development community is to stimulate research that will lead to the creation of responsive environments for networking and, in the longer term, the development of adaptive, secure, mobile, and intuitive intelligent systems for collaborative work and learning.

Matching, CPM 2013, held in Bad Herrenalb (near Karlsruhe), Germany, in June 2013. The 21 revised full papers presented together with 2 invited talks were carefully reviewed and selected from 51 submissions. The papers address issues of searching and matching strings and more complicated patterns such as trees, regular expressions, graphs, point sets, and arrays. The goal is to derive non-trivial combinatorial properties of such structures and to exploit these properties in order to either achieve superior performance for the corresponding computational problem or pinpoint conditions under which searches cannot be performed efficiently. The meeting also deals with problems in computational biology, data compression and data mining, coding, information retrieval, natural language processing, and pattern recognition.

*Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas* - M. A. Hayat

2005-01-31

Immunohistochemistry is the use of specific antibodies to stain particular molecular species in situ. This technique has allowed the identification of many more cell types than could be visualized by classical histology, particularly in the immune system and among the scattered hormone-secreting cells of the endocrine system, and has the potential to improve diagnosis, prognosis and therapeutic options of cancer. *Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas* discusses all aspects of immunohistochemistry and in situ hybridization technologies and the important role they play in reaching a cancer diagnosis. It provides step-by-step instructions on the methods of additional molecular technologies such as DNA microarrays, and microdissection, along with the benefits and limitations of each method. The topics of region-specific gene expression, its role in cancer development and

the techniques that assist in the understanding of the molecular basis of disease are relevant and necessary in science today. This book is the second volume of three planned, individually-sold volumes on this topic. Like Volume 1, this book fully explains the principles and applications of modern techniques used in the field of molecular genetics. It will be of particular interest to pathologists and molecular pathologists conducting both academic and/or clinical research. The only book available that translates molecular genetics into cancer diagnosis. The results of each Immunohistochemical and in situ hybridization method are presented in the form of color illustrations. Methods discussed were either developed or refined by expert contributors in their own laboratories.

**Metalanguages for Dissecting Translation Processes** - Rei Miyata  
2022-06-10

This edited volume covers the development and application of metalanguages for concretely describing and communicating translation processes in practice. In a modern setting of project-based translation, it is crucial to bridge the gaps between various actors involved in the translation process, especially among clients, translation service providers (TSPs), translators, and technology developers. However, we have been confronted with the lack of common understanding among them about the notion and detailed mechanisms of translation. Against this backdrop, we are developing systematic, fine-grained metalanguages that are designed to describe and analyse translation processes in concrete terms. Underpinned by the rich accumulation of theoretical findings in translation studies and established standards of practical translation services, such as ISO 17100, our metalanguages extensively cover the core processes in

translation projects, namely project management, source document analysis, translation, and revision. Gathering authors with diverse backgrounds and expertise, this book proffers the fruits of the contributors' collaborative endeavour; it not only provides practicable metalanguages, but also reports on wide-ranging case studies on the application of metalanguages in practical and pedagogical scenarios. This book supplies concrete guidance for those who are involved in the translation practices and translation training/education. In addition to being of practical use, the metalanguages reflect explication of the translation process. As such, this book provides essential insights for researchers and students in the field of translation studies.

Concrete in the Service of Mankind - Ravindra Dhir  
2003-09-02

Concrete is ubiquitous and unique, found in every developed and developing country. Indeed, there are no alternatives to concrete as a

volume construction material for infrastructure. This raises important questions of how concrete should be designed and constructed for cost effective use in the the short and long term, and to encourage further radical development. Equally, it must be environmentally friendly during manufacture, in an aesthetic presentation in structures and in the containment of harmful materials.; The central theme of the Congress is Concrete in the Service of Mankind, under which five self-contained Conferences, each dealing with a particular aspect, are planned. The Congress offers opportunity to discuss how to improve and extend this service to mankind using responsible exploitation, underwritten by sound technical understanding and research base. It brings together the shared skills and experience of the various disciplines involved in the construction process world wide.; This major publication continues the tradition

established by Dundee University of organizing major international conferences every three years dealing with some aspect of concrete and also the link between Spon and Dundee University for publication of the proceedings.; This book should be of interest to concrete technologists; contractors; civil engineers; consultants; government agencies; research organizations.

the areas of multimedia and telecommunications applications in industry. This book collects the 58 reviewed papers from 18 countries, that were chosen out of 140 submissions for presentation at the conference. An introductory paper entitled "Multimedia in Facet: A Facet of Hong Kong Environment" by Wing S Chow et al., is included as an introductory chapter to render readers a better understanding of the study subjects. This volume is useful for researchers, practitioners and students alike for an update on the most recent developments in the ever-changing and significant field of multimedia and telecommunications.

**Advances in Internet, Data and Web Technologies** -

Leonard Barolli 2019-02-05

This book presents original contributions on the theories and practices of emerging Internet, Data and Web technologies and their applications in businesses, engineering and academia. As a key feature, it addresses

advances in the life-cycle exploitation of data generated by digital ecosystem technologies. The Internet has become the most proliferative platform for emerging large-scale computing paradigms. Among these, Data and Web technologies are two of the most prominent paradigms, manifesting in a variety of forms such as Data Centers, Cloud Computing, Mobile Cloud, Mobile Web Services, and so on. These technologies altogether create a digital ecosystem whose cornerstone is the data cycle, from capturing to processing, analysis and visualization. The need to investigate various research and development issues in this digital ecosystem has been made even more pressing by the ever-increasing demands of real-life applications, which are based on storing and processing large amounts of data. Given its scope, the book offers a valuable asset for all researchers, software developers, practitioners and students interested in the field
