*Osteopathy* - Jon Parsons 2005-11-02

This book is a textbook of basic osteopathic concepts, working from first principles underpinned by anatomy and physiology. This text will synthesize and integrate osteopathic models in an easy-to-understand way, a subject often daunting to students and confusing to graduates. Composed of four sections, the first is a discussion of basic principles, the second focusses on models and diagnosis of treatment which is followed by anatomical, neurophysiological and osteopathic considerations. The last section describes clinical case-studies to enable students to put into practice the theories and models which they have learned. This book is essential reading for all osteopathic BSc degree courses and a core textbook for undergraduate students. At the end of each section there will be clinical examples for students to work on to integrate previous knowledge. Key point boxes.

The Anti-Inflammation Zone - Barry Sears 2009-10-13

Combat silent inflammation -- the most serious health threat you never heard of Heart disease is the #1 killer of Americans. Cancer is the #1 fear of Americans. Dementia is the #1 concern of Americans. What do these devastating illnesses have in common? All three have been linked to silent inflammation, a condition that occurs when the body's natural immune response goes awry. Silent inflammation can continue undetected for years, continually assaulting the heart, arteries, and even the brain -- and you will not even know it. New research confirms that obesity is a primary cause of silent inflammation. And inflammation is the smoking gun that links excess body fat to today's epidemic rise in heart disease, cancer, dementia, and countless other health threats. Although the science of this relationship is complex, the bottom line is simple: If not detected and reversed, silent inflammation will devastate generations of Americans and bankrupt an increasingly stressed health care system. The medical establishment appears to be ignorant about this problem, politicians don't talk about it -- and yet virtually everyone in the country is affected by it. In his number one New York Times bestseller *The Zone*, Dr. Barry Sears revolutionized the way we think about nutrition when he showed that a high-carbohydrate diet is a real risk to our health. Now, with eye-opening new research in the field of hormonal control and nutrition, Dr. Sears offers the first comprehensive plan to combat silent inflammation. This important book gives us the tools and tests we need to assess the current level of silent inflammation in our bodies -- and determine our future health. As you'll discover, the Zone dietary plan -- including supplements of high-dose, ultra-refined fish oil -- is the best way to get the hormonal control you need to reduce inflammation. In *The Anti-Inflammation Zone*, Dr. Sears shows exactly what steps to follow to reduce your risk of each disease and condition, or to reverse it if you have it already -- in only thirty days. And the Zone Lifestyle Program includes a week of delicious Zone-friendly meals, easy home exercises, and important stress-reducing methods -- all of which work together to put you on a path toward wellness that will improve the rest of your life. The day you start fighting silent inflammation is the day that you start to slow down the aging process -- and all the chronic diseases that come with it. Welcome to the Anti-Inflammation Zone -- and the return to wellness.

*Enzymes in Action Green Solutions for Chemical Problems* - Binne Zwanenburg 2012-12-06

*Enzymes in Action* is a timely survey of a modern development in organic chemistry. It is clear that bioreagents demand that organic chemists think in a different way. If they do so, they will open up new avenues of exciting, new chemistry that will permit problems to be solved in an elegant way. The first section covers the concepts necessary to understand enzymes in molecular operations. The second section covers heteroatom enzyme chemistry, with considerable attention being given to the use of enzymes in the detoxification of chemical warfare agents and their application in environmental problems. The final section highlights the strategic use of enzymes in organic chemistry. It is clear that the term 'green chemistry' is appropriate, since enzyme mediated processes occur under mild, environmentally benign conditions, and enzymes enable chemists to perform new chemical operations that would otherwise be difficult to achieve at all.

**Communion and Otherness** - John D. Zizioulas 2010-07-15

'Communion and otherness: how can these be reconciled?' In this wide-ranging study, the distinguished Orthodox theologian, Metropolitan John (Zizioulas) of Pergamon, seeks to answer that question. In his celebrated book, *Being as Communion* (1985), he emphasised the importance of communion for life and for unity. In this important companion volume he now explores the complementary fact that communion is the basis for true otherness and identity. With a constant awareness of the deepest existential questions of today, Metropolitan John probes the Christian tradition and highlights the existential concerns that already underlay the writings of the Greek fathers and the definitions of the early ecumenical councils. In a vigorous and challenging way, he defends the freedom to be other as an intrinsic characteristic of personhood, fulfilled only in communion. After a major opening chapter on the ontology of otherness, written specially for this volume, the theme is systematically developed with reference to the Trinity, Christology, anthropology and ecclesiology. Another new chapter defends the idea that the Father is cause of the Trinity, as taught by the Cappadocian fathers, and replies to criticisms of this view. The final chapter responds to the customary separation of ecclesiology from mysticism and strongly favours a mystical understanding of the body of Christ as a whole. Other papers, previously published but some not easily obtainable, are all revised for their inclusion here. This is a further contribution to dialogue on some of the most vital issues for theology and the Church from one of the leading figures in modern ecumenism.

*The Bioarchaeology of Ritual and Religion* - Alexandra Livarda 2017-12-21

The Bioarchaeology of Ritual and Religion is the first volume dedicated to exploring ritual and religious practice in past societies from a variety of 'environmental' remains. Building on recent debates surrounding, for instance, performance, materiality and the false dichotomy between ritualistic and secular behavior, this book investigates notions of ritual and religion through the lens of perishable material culture. Research centering on bioarchaeological evidence and drawing on methods from archaeological science has traditionally focused on functional questions surrounding environment and economy. However, recent years have seen an increased recognition of the under-exploited potential for scientific data to provide detailed information relating to ritual and religious practice. This volume explores the diverse roles of plant, animal, and other organic remains in ritual and religion, as foods, offerings, sensory or healing mediums, grave goods, and worked artifacts. It also provides insights into how archaeological science can shed light on the reconstruction of ritual processes and the framing of rituals. The 14 papers showcase current and new approaches in the investigation of bioarchaeological evidence for elucidating complex social issues and worldviews. The case studies are intentionally broad, encompassing a range of sub-disciplines of bioarchaeology including archaeobotany, anthracology, palynology, micromorphology, geoarchaeology, zooarchaeology (including avian and worked bone studies), archaeomalacology, and organic residue analysis. The temporal and geographical coverage is equally wide, extending across Europe from the Mediterranean and Aegean to the Baltic and North Atlantic regions, and from the Mesolithic to the medieval period. The volume also includes a discursive paper by Prof. Brian Hayden, who suggests a different interpretative framework of archaeological contexts and rituals.
