Exercises in Practical Chemistry - Augustus George Vernon-Harcourt
2017-10-22

Excerpt from Exercises in Practical Chemistry: Series I, Qualitative Exercises In Part I, Sect. V, which gives directions for the performance of experiments upon salts of the principal metallic and non-metallic radicles, the operations are described in less detail, both because they are simpler and more uniform in character, and because something may fairly be left to the experience the student has gained. In this section the experiments described are chiefly such as find some application in the course of qualitative analysis which follows. The division into exercises is not continued, since the experiments with each radicle form a separate group, and one or more of these can be performed at the same time, as may be found convenient. Part II gives the course to be followed in the analysis of a single salt, for the outline of which the authors are mainly indebted to Fresenius' Qualitative Analysis.' Practical Inorganic Chemistry - G. Pass 2013-03-09

In revising the text opportunity has been taken to introduce SI units throughout. An Appendix has been included which contains tables of SI units and a table of conversion factors for use when consulting data in non-SI units. Chapter 19 now includes experiments demon strating the use of ion-exchange and solid-liquid chromatography_ Exercises involving colorimetry have been included in Chapter 17. These techniques are introduced as part of a complementary exercise where their relevance is seen as part of a complete piece of work. Minor improvements have been made to some of the experimental procedures and we are grateful to those who have made helpful suggestions in this respect. G. PASS H. SUTCLIFFE iii Preface to the First Edition The student of inorganic chemistry is fortunate in having a wide choice of textbooks covering the descriptive and theoretical aspects of the sUbject. There is no comparable choice of textbooks covering practical inorganic chemistry. Moreover, there is a tendency for many students to draw an unfortunate distinction between chemistry taught in the lecture room, and laboratory work. Consideration of these points prompted the preparation of this book, in

which we have attempted to emphasize the relationship between theory and practice.

An Introduction to the Study of Qualitative Chemical Analysis - J.

T. McGill 2015-06-25

Excerpt from An Introduction to the Study of Qualitative Chemical Analysis

This little book is intended to be used only with the assistance of a teacher and as an introduction to some full work on qualitative analysis, such as that of Fresenius or Prescott. Part I. contains such experiments as are found in late elementary works on inorganic chemistry. These experiments are designed to train the student in the construction and handling of chemical apparatus, and to teach him how to observe scientifically, reason upon his observations, and draw correct conclusions from them. They are selected for the most part with special reference to the analytical work that follows in Part II., and include the preparation of many of the reagents used in qualitative analysis and the examination of their properties. Part I. may be omitted by students who have taken a course in elementary chemistry, including experiments in the laboratory, such as Eliot and Storer's, Remsen's, or Williams's. Part II. contains the special feature of this hook-t. e., the application to qualitative analysis of that method of teaching which, instead of imparting directly to the student the facts or laws which are the object of the study, leads him by questions and suggestions to work them out for himself. The use of this method for two years in Vanderbilt University has led me to conclude that it prevents to a great extent the blind following of directions, which the

student is so liable to fall into in qualitative analysis, and that it also imparts greater interest to this study by requiring the student to test by practical examples the correctness of the conclusions which he has arrived at as the result of his own investigations. Excerpt from A Laboratory Text Book of Practical Chemistry, or Introduction to Qualitative Analysis: A Guide to the Course of Practical Instruction Given in the Laboratories of the Royal College of Chemistry During an extended period of laboratory teaching, I have acquired a knowledge of the difficulties usually encountered by students during their early laboratory practice; and I have endeavoured to anticipate, as far as possible, the references usually made to the teacher by students, by supplying information on points which may appear trifling, but which constitute formidable obstacles in the way of the beginner, to be cleared away only at the expense of much valuable time. A. Surface Chemistry 1. To prepare colloidal solution (sol) of starch, 2. To prepare a colloidal solution of egg albumin 3. To prepare colloidal solution of gum, 4. To prepare colloidal solution of aluminium hydroxide $[Al(OH)_3]$, 5. To prepare colloidal solution of ferric hydroxide $[Fe(OH)_3]$, 6. To prepare colloidal solution of arsenious sulphide $[As_2S_3]$, 7. To purify a freshly prepared sol by dialysis, 8. To compare the effectiveness of different common oils (Castor oil, cotton seed oil, coconut oil, kerosene oil, mustard oil) in forming emulsions. Viva-Voce B. Chemical Kinetics 1. To study the effect of concentration on the rate of reaction between sodium thiosulphate and hydrochloric acid, 2. To study the effect of temperature on the rate of reaction between sodium thiosulphate and hydrochloric acid, 3. To study the rate of reaction of iodide ions with hydrogen peroxide at different concentrations of iodide ions, 4. To study the rate of reaction between potassium iodate (KIO_3) and sodium sulphite (Na_2SO_3) using starch solution as indicator Viva-Voce C. Thermochemistry 1. Determine the enthalpy of dissolution of copper sulphate ($CuSO_4 \cdot 5H_2O$) in water at Room temperature, 2. To determine the enthalpy of neutralization of the reaction between HCl and NaOH, 3. To determine enthalpy change during the interaction between acetone and chloroform Viva-Voce D. Electrochemistry 1. To study the variation of cell potential in $Zn|Zn^{2+}||Cu^{2+}|Cu$, with change in concentration of electrolytes ($CuSO_4$ or $ZnSO_4$) at room temperature Viva-Voce E. Chromatography 1. To separate the coloured components (pigment) present in the given extract of leaves and flowers by ascending paper chromatography and find their R_f values, 2. To separate the coloured components present in the mixture of red and blue inks by ascending paper chromatography and find their R_f values, 3. To separate Co^{2+} and Ni^{2+} ions present in the given mixture by using ascending paper chromatography and determine their R_f values Viva-Voce F. Preparation of Inorganic Compounds 1. Preparation of double salt of ferrous ammonium sulphate (Mohr's salt) from ferrous sulphate and ammonium sulphate, 2.

To prepare a pure sample of potash alum (fitkari), 3. Preparation of crystals of potassium ferric oxalate or potassium trioxalato ferrate (III) Viva-Voce G. Preparation of Organic Compounds 1. Preparation of iodoform from ethyl alcohol or acetone, 2. Preparation of acetanilide in laboratory, 3. Preparation of *p*-Naphthol aniline dye, 4. To prepare a pure sample of dibenzalacetone, 5. To prepare a pure sample of *p*-nitro acetanilide Viva-Voce H. Tests for the Functional Groups Present in Organic Compounds Viva-Voce I. Study of Carbohydrates, Fats and Proteins 1. To study simple reactions of carbohydrate, 2. To study simple reactions of fats, 3. To study simple reactions of proteins, 4. To investigate presence of carbohydrates, fats and proteins in food stuffs Viva-Voce J. Volumetric Analysis 1. To prepare 250 ml of M/10 solution of oxalic acid, 2. To prepare 250 ml of M/10 solution of ferrous ammonium sulphate, 3. Prepare M/20 solution of oxalic acid, with its help find out the molarity and strength of the given solution of potassium permanganate, 4. Prepare M/20 solution of Mohr's salt, using this solution determine the molarity and strength of potassium permanganate solution Viva-Voce K. Qualitative Analysis Viva-Voce INVESTIGATORY PROJECTS 1. To study the presence of oxalate ions in guava fruit at different stages of ripening. 2. To study the quantity of caseine present in different samples of milk. 3. Preparation of soyabean milk and its comparison with natural milk with respect to curd formation, effect of temperature etc. 4. To study the effect of potassium bisulphite as food preservative at various concentrations. 5. To study the digestion of starch by salivary amylase and the effect of pH and temperature on it. 6. To study and compare the rate of fermentation of the following materials—wheat flour, gram flour, potato juice and carrot juice. 7. To extract essential oils present in saunf (aniseed), ajwain (corum), illaichi (cardomom). 8. To detect the presence of adulteration in fat, oil and butter, 9. To investigate the presence of NO_2^- in brinjal.

Practical Chemistry; the Principles of Qualitative Analysis - Sir William Augustus Tilden 2013-09

This historic book may have numerous typos and missing text. Purchasers

can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1886 edition. Excerpt: ... PRACTICAL CHEMISTRY. PART I. PRELIMINARY. To make a Washing Bottle.--Take a clean widemouth bottle, holding about a pint, and fit a good sound cork tightly into the neck. Then take a piece of stout glass tubing (about inch external diameter) and, with the aid of a cork borer, bore two holes through the cork, parallel to each other and of such a size that the tube will pass through with some friction. If you have not a cork borer of the exact size required, take one a little smaller and then enlarge the hole by means of a round file. Cut off a piece of the tube of about twice the height of the bottle. Draw off one end to a point in the blowpipe flame. Cut it off with a file and make the orifice smooth by holding it in the flame for a minute or two, taking care not to close it completely. Then, in a common fish-tail gas flame, bend the tube so as to form an angle of about 60 at such a distance from the wide end that when the tube is passed through the cork it will reach well to the bottom of the bottle. Into the second hole in the cork another piece of the same tubing is fitted, but this is cut off just below the cork, and is bent to form an angle of about 120 . The open end, projecting upwards, should be made smooth at the edge, by holding it for a few minutes in quantities of water into test tubes and for general purposes as a store of water. It is used by blowing gently into the upturned end of the mouthpiece, and so producing a pressure upon the surface of the water in the bottle. To Fix a Platinum Wire into a Glass Holder.-- Take six inches of narrow glass tubing, and by holding it in the Bunsen flame soften it so that it may be drawn out in the middle. When cold, scratch it at the middle with a file and break it...

Elementary Practical Chemistry and Qualitative Analysis (Classic Reprint) - Frank Clowes 2017-11-16

Excerpt from Elementary Practical Chemistry and Qualitative Analysis The text-book on Qualitative Analysis, written by one of us, has proved by its success that it meets the requirements of large numbers of teachers and students. It furnishes a fairly complete course of work for a student who intends to make a study of Qualitative Analysis. We have long felt,

however, that a smaller treatise would be useful to students of elementary practical chemistry and chemical analysis, who have the opportunity of working in a suitably equipped laboratory and under the direction of a teacher. The course of instruction in this book is adapted to those students who do not need so thorough a chemical training as that which must be undertaken by the future professional and analytical chemist. This smaller book is therefore intended for the general students and the technical students of our schools and colleges. Elementary Qualitative Analysis - Benton Dales 1916

Machine Design ...: Form, strength, and proportions of parts - Forrest Robert Jones 1903

Modern Experimental Chemistry - George W. Jr. Latimer 2012-12-02
Modern Experimental Chemistry provides techniques of qualitative analysis that reinforce experiments on ionic equilibria. This book includes the determination of water in hydrated salts; identification of an organic compound after determining its molecular weight; and nonaqueous titration of a salt of a weak acid. The calculation of chemical stoichiometry; calculation of thermodynamic properties by determining the change in equilibrium with temperature; and chromium chemistry are also covered. This compilation contains enough experiments for classes which have six hours of laboratory (two 3-hour meetings) per week to last two semesters. This publication is intended for chemistry students as an introductory manual to chemistry laboratory.

National Note-book Sheets for Laboratory Work in Chemistry - Arthur Stone Dewing 1909

Essentials of Chemistry Practical for Secondary Schools - Edwin Malika 2012-09-01

The book covers exhaustively the secondary chemistry practical syllabus. It covers from one to four practical topics namely; volumetric analysis qualitative analysis, energy changes and reaction rates. The topics are written in simple language that matches the level of learners. Each topic begins with a brief introduction which is then followed by requirements and procedures for various practical and exercise are given to solidify the knowledge in the learner. In addition, steps followed when preparing solutions are well explained to help the teacher prepare solutions for various practical. The examples and exercise are framed in K.C.S.E style of setting questions. The book adheres to the use of international unit for physical and applied chemistry (IUPAC) nomenclature. The book gives six K.C.S.E model examination papers for revision by the students as they prepare for their final examination. In addition, steps followed in writing projects for science congress are succinctly discussed. One example of project in chemistry practical is well explained to help students, think about other areas where practical chemistry can be applied in their day to day life.

Chemistry: Inorganic Qualitative Analysis in the Laboratory - Clyde Metz 2012-12-02

Chemistry: Inorganic Qualitative Analysis in the Laboratory is a textbook dealing with qualitative analysis in the laboratory, as well as with the process of anion and cation analysis. The book presents an overview of the subject of inorganic qualitative analysis, including as the equipment, reagents, and procedures that are going to be used in the laboratory. Preliminary experiments include the classification of precipitates, handling precipitates, separation techniques, flame tests, Brown ring test, solvent extraction. The text also describes in detail how to prepare the experiment for anion and cation analysis such as testing for water solubility in a solid sample or the sodium carbonate treatment of a water-

soluble sample. The book also explains the qualitative analysis for anions in preliminary and specific tests. In the qualitative analysis for cations, the student follows different procedures for Cation Groups I, II, III, IV or V. For example, the ions of Cation Group V cannot be precipitated by any Cation Groups I-IV reagents, nor by any single group reagent. The textbook is suitable for both chemistry teachers and freshmen students.

Qualitative Research from Start to Finish, First Edition - Robert K. Yin 2011-09-26

This lively, practical text presents a fresh and comprehensive approach to doing qualitative research. The book offers a unique balance of theory and clear-cut choices for customizing every phase of a qualitative study. A scholarly mix of classic and contemporary studies from multiple disciplines provides compelling, field-based examples of the full range of qualitative approaches. Readers learn about adaptive ways of designing studies, collecting data, analyzing data, and reporting findings. Key aspects of the researcher's craft are addressed, such as fieldwork options, the five phases of data analysis (with and without using computer-based software), and how to incorporate the researcher's "declarative" and "reflective" selves into a final report. Ideal for graduate-level courses, the text includes: * Discussions of ethnography, grounded theory, phenomenology, feminist research, and other approaches. * Instructions for creating a study bank to get a new study started. * End-of-chapter exercises and a semester-long, field-based project. * Quick study boxes, research vignettes, sample studies, and a glossary. * Previews for sections within chapters, and chapter recaps. * Discussion of the place of qualitative research among other social science methods, including mixed methods research.

A Treatise on Practical Chemistry and Qualitative Analysis - Frank Clowes 2018-09-26

Excerpt from A Treatise on Practical Chemistry and Qualitative Analysis: Adapted for Use in the Laboratories of Colleges and Schools Symbolic notation has been employed throughout the Sections on analytical chemistry. In its most concise form, this chemical shorthand conduces so much to brevity in writing down results, that no other plea is required for

its use. The simple plan of entering upon the label of each bottle in the laboratory not only the chemical name but also the chemical formula of its contents, will prevent the general use of chemical formula from causing perplexity to beginners. A reference to the lists of chemicals in Section VII. Will also furnish the formula which corresponds to the name of any substance. It has, however, been thought well to insert the chemical name of each substance together with its formula, when the substance is first referred to in the text. Senior Practical Chemistry - Harold William Bausor 2015-06-25

Excerpt from Senior Practical Chemistry This little book provides a course of experimental work which is designed to meet the requirements of the Senior Cambridge Local Examination in Practical Chemistry. It is divided into three parts. In Part I., Chapter I., a number of carefully selected preparations are described, with full working details and diagrams (where necessary); in Chapter II. the action of heat on some typical substances is investigated. Part II. deals with Quantitative Analysis, Chapter I. consisting of a selection of simple experiments mainly gravimetric, whilst Chapter II. contains an elementary treatment of Volumetric Analysis. Part III. is concerned with the Qualitative Analysis of Simple Salts. The syllabus of the Examination, however, states that alternative questions will be set, so

that a candidate may avoid the Qualitative Analysis altogether if he wishes. No apologies are needed for writing a text-book to a particular syllabus provided it is a good syllabus. As this condition is certainly satisfied the author hopes that the book will be found useful by a wider range of students than those for whom he is ostensibly writing. We have to thank the Controller of His Majesty's Stationery Office, and also Messrs. Macmillan and Co. for their kind permission to include in this book the Tables of Logarithms and Antilogarithms published in "Examinations in Science and Technology." Excerpt from Qualitative Chemical Analysis: A Guide in the Practical Study of Chemistry and in the Work The first edition of this work appeared in 1878, the second revised edition in 1876, and the third in 1880. With the first edition were incorporated the Tables for Qualitative Analysis by Professor Silas H. Douglas, editions of which had appeared in 1864, 1865, and 1868. Professor Douglas having some years since retired from engagements in chemistry, and being by his' long and most valuable services in chemical education well entitled to release, now withdraws his name from the authorship of this work. Excerpt from A d104-Book of Inorganic Chemistry, Vol. 2: Descriptive, Theoretical, and Practical a Manual for Advanced Students, Part II, Metallic Elements and Qualitative Analysis The favorable reception that has been given to Part I. Of this work has encouraged the author to publish Part II., which completes the volume. The same general method of present ing the subject that was adopted for Part I. Has been fol lowed in this part. The treatment given the classification of the elements by the periodic law it is hoped will prove sufficiently extended to meet the needs of students using this work, although many points in reference to it have not been spoken of. Much work in collecting and bringing periodic facts together has been merely suggested, and then left for the. Student (and instructor) to do, in the hope that it will stimulate a study of these facts, and thus impress them on the mind of the learner. The writer believes that quantitative study should begin early in a course in chemistry, and so much of this has been introduced as experience has shown beginners can profitably do. Outlines of Organic Chemistry - Forris Jewett Moore 1915

Practical Chemistry - UNKNOWN. AUTHOR 2015-06-26

Excerpt from Practical Chemistry: Part I. Elementary This book is offered to students and teachers as the first part of what I hope may prove to be a tolerably satisfactory, and fairly systematic, course of Practical Chemistry. It is the first portion of the result of very many attempts, made during twenty-five years, to devise a workable system of teaching in the laboratory. My experience as a teacher convinces me that qualitative analysis cannot be introduced with any hope of profit at an early stage of a course of practical chemistry. I have, therefore, placed a somewhat extended course of preparations, and of experiments on the reactions of some of the chief classes of inorganic compounds, before the section which deals with the elements of qualitative analysis. The directions for performing the various experiments are given in considerable detail; because I have always found that superficial directions lead to, and encourage, superficial slipshod work. At the same time, I have endeavoured to lead students to use their reasoning faculties by introducing exercises to be worked out in the laboratory by applying the methods, and the results, of experiments full details for the performance whereof have been given. Practical Chemistry - William Augustus Tilden 2018-01-09

Excerpt from Practical Chemistry: The Principles of Qualitative Analysis
The second part is devoted to methods of Analysis. Here he is first instructed in the properties of a few of the constituents of common salts, and is taught methods for their separation or identification in presence of one another. If he goes no further than this he will at least have learnt what chemical analysis means. He afterwards proceeds to extend his knowledge, till at the end of the course he will be able to analyse any mixture of ordinary inorganic substances. The analytical part is to a great extent shorn of directions for manipulation, as well as of details which are not relevant to the immediate object of the experiment. According to my experience these are not only of no use, but are a positive hindrance to the apprehension of the facts to be acquired. Manipulation can only be learnt properly under personal instruction by a competent teacher, and more will be accomplished by letting the beginner see once for all how a thing is to be done than by whole volumes of printed directions. A Laboratory Manual of Qualitative Chemical Analysis for Students of Pharmacy (Classic Reprint) - Theodore J. Bradley 2015-07-02

Excerpt from A Laboratory Manual of Qualitative Chemical Analysis for Students of Pharmacy Qualitative analysis is of use to the pharmacist in testing chemicals for identity and purity. The study of the subject is also of value because of the practical knowledge of chemicals and chemical processes acquired by the student, and because it gives training in careful observation and develops the reasoning powers as they are exercised in the interpretation of results. This Manual was prepared as a guide for the author's own classes, and the objects sought are to acquaint the student with the general methods of qualitative analysis and to prepare him to carry out such qualitative tests as the pharmacist may be called upon to make. The course is arranged to include one hour of lecture, one hour of recitation and about three hours of laboratory work per week for one school year. Practice on the analysis of unknown solutions is provided for throughout the course. This is important, as it not only increases the interest of the student in the work but also develops his self-reliance by constantly putting him upon his own responsibility in doing his work and in interpreting his results. The introductory section on the theory of chemistry may be omitted if it is not necessary for the class to study or review this part of the subject. The Manual is in no sense a reference book, and in general only those things are included that are needed as a guide for the laboratory work, or which may easily be learned in connection with this work. A standard reference book on qualitative analysis will be of great service while taking the course, and such a reference book is indispensable for anyone who is to pursue the subject further.
