developing countries. Although significant progress has been made towards the reduction of maternal mortality and morbidity globally, they are still unacceptably high in developing countries. This can be directly or indirectly tied to poor quality maternal health care and lack of access to cost-effective, comprehensive healthcare. Health practitioners in developing countries also contend with trying to keep abreast of recent developments in obstetrics and gynecology while dealing with lack of time, resources, and access to relevant information. This textbook was thus created by experts in obstetrics and gynecology with extensive experience in African clinical settings and consultants in developed countries to teach proper and accurate diagnosis, treatment and management of gynecologic and obstetric health issues within the context of developing countries. This second edition has been fully updated throughout with an added 25+ chapters that cover topics such as reproductive

health, gynecological cancers and research methods. The book is divided into six sections: Women's Reproductive Health; Obstetrics; Medical and Surgical Disorders in Pregnancy; General Gynecology; Gynecological Malignancies; Health Systems Organization, Research Methodology and Biostatistics. These section topics have been carefully covered by expert authors with the use of valid scientific data, policy instruments, and adapted to the cultural and social context of developing countries, with particular in depth coverage of conditions that have greater prevalence and incidence in developing countries. Each chapter also focuses on filling gaps in knowledge with a distinct pedagogical approach, starting with a set of learning objectives and ending with key takeaways for the chapter. This is an ideal guide for residents, medical students, practitioners of obstetrics and gynecology, midwives, general practitioners, and

Keith Edmonds 2008-04-15

This time honoured classic has been re-built completely: after six editions the editor has decided that a radical revision is necessary. The new edition has been developed as a result of intensive consultation with trainees in OB/GYN as to what they want, what they need and how they learn. **Medical Bondage** - Deirdre Cooper Owens 2017-11-15

The accomplishments of pioneering doctors such as John Peter Mettauer, James Marion Sims, and Nathan Bozeman are well documented. It is also no secret that these nineteenth-century gynecologists performed experimental caesarean sections, ovariectomies, and obstetric fistula repairs primarily on poor and

powerless women. *Medical Bondage* breaks new ground by exploring how and why physicians denied these women their full humanity yet valued them as “medical superbodies” highly suited for medical experimentation. In *Medical Bondage*, Cooper Owens examines a wide range of scientific literature and less formal communications in which gynecologists created and disseminated medical fictions about their patients, such as their belief that black enslaved women could withstand pain better than white “ladies.” Even as they were advancing medicine, these doctors were legitimizing, for decades to come, groundless theories related to whiteness and blackness, men and women, and the inferiority of other races or nationalities. *Medical Bondage* moves between southern plantations and northern urban centers to reveal how nineteenth-century American ideas about race, health, and status influenced doctor-patient relationships in

sites of healing like slave cabins, medical colleges, and hospitals. It also retells the story of black enslaved women and of Irish immigrant women from the perspective of these exploited groups and thus restores for us a picture of their lives.

**Pushed** - Jennifer Block  
2007-09-10

A groundbreaking narrative investigation of childbirth in the age of machines, malpractice, and managed care, *Pushed* presents the complete picture of maternity care in America. From inside the operating room of a hospital with a 44% Cesarean rate to the living room floor of a woman who gives birth with an illegal midwife, Block exposes a system in which few women have an optimal experience. *Pushed* surveys the public health impact of routine labor inductions, C-sections, and epidurals, but also examines childbirth as a women's rights issue: Do women even have the right to choose a normal birth? Is that right being upheld? A wake-up call for our times, Block's gripping research reveals that while emergency obstetric care is essential, we are overusing medical technology at the

expense of maternal and infant health.

believed from an early age that she was destined for a mission beyond the scope of "ordinary" womanhood. Though the world at first recoiled at the notion of a woman studying medicine, her intelligence and intensity ultimately won her the acceptance of the male medical establishment. In 1849, she became the first woman in America to receive an M.D. She was soon joined in her iconic achievement by her younger sister, Emily, who was actually the more brilliant physician. Exploring the sisters' allies, enemies, and enduring partnership, Janice P. Nimura presents a story of trial and triumph. Together, the Blackwells founded the New York Infirmary for Indigent Women and Children, the first hospital staffed entirely by women. Both sisters were tenacious and visionary, but their convictions did not always align with the emergence of women's rights—or with each other. From Bristol, Paris, and Edinburgh to the rising cities of antebellum America, this richly researched new

biography celebrates two complicated pioneers who exploded the limits of possibility for women in medicine. As Elizabeth herself predicted, "a hundred years hence, women will not be what they are now."

Algorithms for Obstetrics and Gynaecology - Sambit Mukhopadhyay 2014

Algorithms in Obstetrics and Gynaecology presents the core knowledge needed to tackle all situations in obstetrics and gynaecology, in a structured fashion. All algorithms are designed to support rapid decision making in the most clinically relevant situations to minimise the risks of a poor outcome. A range of clinical problems are covered from

common non-life-threatening emergencies such as hyperemesis in pregnancy, to life-threatening acute events such as ectopic pregnancy, acute fetal distress or maternal collapse. Each topic is presented as either an algorithm, a care pathway, or table of key information and has been carefully structured to ensure a logical progression of thought to aid anticipation, early diagnosis and prompt and appropriate management. Accompanying key learning points highlight the essential information from the topic. Based on current national guidelines and clinical evidence, the algorithms and care pathways can be used as a reliable and practical resource for day to day practice in obstetrics and gynaecology.
