**A Slap in the Face** - Abbas Khider  
2022-03-22

Now in paperback, the touching, timely story of an Iraqi refugee in Germany. In our era of mass migration, much of it driven by war and its aftermath, *A Slap in the Face* could not be more timely. It tells the story of Karim, an Iraqi refugee living in Germany whose right to asylum has been revoked in the wake of Saddam Hussein's defeat. But Hussein wasn't the only reason Karim left, and as Abbas Khider unfolds his story, we learn both the secret struggles he faced in his homeland and the battles with prejudice, distrust, poverty, and bureaucracy he has to endure in his attempts to make a new life in Germany. As he erupts in frustration at his caseworker, and finally forces her to listen to his story, we get an account of a contemporary life upended by politics and violence, told with a warmth and humor that, while surprising us, does nothing to lessen the outrages Karim describes.

Constructional Approaches to Syntactic Structures in German - Hans C. Boas 2018-07-09

This book provides a state of the art collection of constructional research on syntactic structures in German. The volume is unique in that it offers an easily accessible, yet

comprehensive and sophisticated variety of papers. Moreover, various of the papers make explicit connections between grammatical constructions and the concept of valency which has figured quite prominently in Germanic Linguistics over the past half century.

**The 'Made in Germany' Champion Brands**

- Ugesh A. Joseph 2016-03-09

Germany's economic miracle is a widely-known phenomenon, and the world-leading, innovative products and services associated with German companies are something that others seek to imitate. In *The 'Made in Germany' Champion Brands*, Ugesh A. Joseph provides an extensively researched, insightful look at over 200 of Germany's best brands to see what they stand for, what has made them what they are today, and what might be transferable. The way Germany is branded as a nation carries across into the branding of its companies and services, particularly the global superstar brands - truly world-class in size, performance and reputation. Just as important are the medium-sized and small enterprises, known as the 'Mittelstand'. These innovative and successful enterprises from a wide range of industries and product / service categories are amongst the World market leaders in their own niche and play a huge part in making Germany what it is today. The book also focuses on German industrial entrepreneurship and a selection of innovative and emergent stars. All these companies are supported and encouraged by a sophisticated infrastructure of facilitators, influencers and enhancers - the research, industry, trade and standards organizations, the fairs and exhibitions and all the social and cultural factors that influence,

enhance and add positive value to the country's image. Professionals or academics interested in business; entrepreneurship; branding and marketing; product or service development; international trade and business development policy, will find fascinating insights in this book; while those with an interest in Germany from emerging industrial economies will learn something of the secrets of German success.

**Advanced Design and Manufacturing Based on STEP** - Xun Xu 2009-09-29

Design and manufacturing is the essential element in any product development lifecycle. Industry vendors and users have been seeking a common language to be used for the entire product development lifecycle that can describe design, manufacturing and other data pertaining to the product. Many solutions were proposed, the most successful being the Standard for Exchange of Product model (STEP). STEP provides a mechanism that is capable of describing product data, independent from any particular system. The nature of this description makes it suitable not only for neutral file exchange, but also as a basis for implementing, sharing and archiving product databases. ISO 10303-AP203 is the first and perhaps the most successful AP developed to exchange design data between different CAD systems. Going from geometric data (as in AP203) to features (as in AP224) represents an important step towards having the right type of data in a STEP-based CAD/CAM system. Of particular significance is the publication of STEP-NC, as an extension of STEP to NC, utilising feature-based concepts for CNC machining purposes. The aim of this book is to provide a snapshot of the recent research outcomes and implementation cases in the field of design and manufacturing where STEP

is used as the primary data representation protocol. The 20 chapters are contributed by authors from most of the top research teams in the world. These research teams are based in national research institutes, industries as well as universities.

*German Pop Literature* - Margaret McCarthy 2015-04-24

Pop literature of the 1990s enjoyed bestselling success, as well as an extensive and sometimes bluntly derogatory reception in the press. Since then, less censorious scholarship on pop has emerged to challenge its flash-in-the-pan status by situating the genre within a longer history of aesthetic practices. This volume draws on recent work and its attempts to define the genre, locate historical antecedents and assess pop's ability to challenge the status quo. Significantly, it questions the 'official story' of pop literature by looking beyond Ralf Dieter Brinkmann's works as origin to those of Jürgen Ploog, Jörg Fauser and Hadayatullah Hübsch. It also remedies the lack of attention to questions of gender in previous pop lit scholarship and demonstrates how the genre has evolved in the new millennium via expanded thematic concerns and new aesthetic approaches. Essays in the volume examine the writing of well-known, established pop authors – such as Christian Kracht, Andreas Neumeister, Joachim Lottman, Benjamin Lebert, Florian Illies, Feridun Zaimoğlu and Sven Regener – as well as more recent works by Jana Hensel, Charlotte Roche, Kerstin Grether, Helene Hegemann and songwriter/poet Peter Licht.

**Clothing Sacred Scriptures** - David  
Ganz 2018-12-03

According to a longstanding  
interpretation, book religions are  
agents of textuality and  
logocentrism. This volume inverts the  
traditional perspective: its focus is  
on the strong dependency between  
scripture and aesthetics, holy books  
and material artworks, sacred texts  
and ritual performances. The  
contributions, written by a group of  
international specialists in Western,  
Byzantine, Islamic and Jewish Art,  
are committed to a comparative and  
transcultural approach. The authors  
reflect upon the different strategies  
of »clothing« sacred texts with  
precious materials and elaborate  
forms. They show how the  
pretypographic cultures of the Middle  
Ages used book ornaments as media for  
building a close relation between the  
divine words and their human  
audience. By exploring how art shapes  
the religious practice of books, and  
how the religious use of books shapes  
the evolution of artistic practices  
this book contributes to a new  
understanding of the deep nexus  
between sacred scripture and art.

*The Guiltless* - Hermann Broch 2000  
"Murder, lust, shame, hypocrisy, and suicide are at the center of *The Guiltless*, Hermann Broch's postwar novel about the disintegration of European society in the three decades preceding the Second World War. Broch's characters - an apathetic man who can barely remember his own name; a high-school teacher and his lover who return from the brink of a suicide pact to carry on a dishonest relationship; Zerline, a lady's maid who enslaves her mistresses, prostitutes the young country girl Melitta, and metes out her own

justice against the "empty wickedness" of her betters - are trapped in their indifference, prisoners of a sort of "wakeful somnolence." These men and women may mention the "imbecile Hitler," yet they prefer a nap or sexual encounter to any social action. Broch thought the kind of ethical perversity and political apathy exhibited by his characters paved the way for Nazism. He believed in the purifying power of writing and hoped that by revealing Germany's underlying guilt he could purge indifference from his own and future generations. In *The Guiltless*, Broch captures how apathy and ennui - very human failings - evolve into something dehumanizing and dangerous." --Book Jacket.

**What Does it Mean to be Human? Life, Death, Personhood and the**

**Transhumanist Movement** - D. John Doyle 2018-09-01

This book is a critical examination of the philosophical and moral issues in relation to human enhancement and the various related medical developments that are now rapidly moving from the laboratory into the clinical realm. In the book, the author critically examines technologies such as genetic engineering, neural implants, pharmacologic enhancement, and cryonic suspension from transhumanist and bioconservative positions, focusing primarily on moral issues and what it means to be a human in a setting where technological interventions sometimes impact strongly on our humanity. The author also introduces the notion that death is a process rather than an event, as well as identifies philosophical and clinical limitations in the contemporary determination of brain death as a precursor to organ procurement for transplantation. The discussion on what exactly it means to be dead is later applied to

explore philosophical and clinical issues germane to the cryonics movement. Written by a physician/scientist and heavily referenced to the peer-reviewed medical and scientific literature, the book is aimed at advanced students and academics but should be readable by any intelligent reader willing to carry out some side-reading. No prior knowledge of moral philosophy is assumed, as the various key approaches to moral philosophy are outlined early in the book.

*Germany* - Neil MacGregor 2015-09-29  
For the past 140 years, Germany has been the central power in continental Europe. Twenty-five years ago a new German state came into being. How much do we really understand this new Germany, and how do its people understand themselves? Neil MacGregor argues that, uniquely for any European country, no coherent, overarching narrative of Germany's history can be constructed, for in Germany both geography and history have always been unstable. Its frontiers have constantly shifted. Königsberg, home to the greatest German philosopher, Immanuel Kant, is now Kaliningrad, Russia; Strasbourg, in whose cathedral Wolfgang von Goethe, Germany's greatest writer, discovered the distinctiveness of his country's art and history, now lies within the borders of France. For most of the five hundred years covered by this book Germany has been composed of many separate political units, each with a distinct history. And any comfortable national story Germans might have told themselves before 1914 was destroyed by the events of the following thirty years. German history may be inherently fragmented, but it contains a large number of widely shared memories, awarenesses, and experiences; examining some of these is the purpose of this book. MacGregor

chooses objects and ideas, people and places that still resonate in the new Germany—porcelain from Dresden and rubble from its ruins, Bauhaus design and the German sausage, the crown of Charlemagne and the gates of Buchenwald—to show us something of its collective imagination. There has never been a book about Germany quite like it.

**Simulations with NX / Simcenter 3D** -

Reiner Anderl 2018-09-10

Testing and optimizing digital products with Siemens NX and Simcenter 3D In times of Industry 4.0 the digitalization of the value-chain becomes more and more important. The so-called digital twin allows simulations that are very close to reality. This book provides all necessary basics to perform simple as well as complex simulations with NX and Simcenter 3D (former NX CAE). It is aimed at design engineers, CAE engineers and engineering students. The following topics are covered in the book: - Motion Simulation (MBD) - Design Simulation (FEA, Nastran) - Simcenter/Advanced Simulation (FEA, CFD and EM) - Management of Calculation and Simulation Data (Teamcenter for Simulation) Starting off with brief theoretical introductions each chapter contains learning tasks of increasing difficulty. Most of them are based on the CAD model of the legendary Opel RAK2. The presented methods are based on NX 12 and Simcenter 3D, the new 3D CAE solution. Revised topics in this edition are Motion Simulation with the new Simcenter Motion solver and post-processing in Simcenter 3D (FEA). The CAD data and calculation results of all exercises can be found online. The exercises can be completed in NX 11, NX 12 and

probably later versions.

**Investing in Development** - Jeffrey D. Sachs 2019-06-03

The Millennium Development Goals, adopted at the UN Millennium Summit in 2000, are the world's targets for dramatically reducing extreme poverty in its many dimensions by 2015 income poverty, hunger, disease, exclusion, lack of infrastructure and shelter while promoting gender equality, education, health and environmental sustainability. These bold goals can be met in all parts of the world if nations follow through on their commitments to work together to meet them. Achieving the Millennium Development Goals offers the prospect of a more secure, just, and prosperous world for all. The UN Millennium Project was commissioned by United Nations Secretary-General Kofi Annan to develop a practical plan of action to meet the Millennium Development Goals. As an independent advisory body directed by Professor Jeffrey D. Sachs, the UN Millennium Project submitted its recommendations to the UN Secretary General in January 2005. The core of the UN Millennium Project's work has been carried out by 10 thematic Task Forces comprising more than 250 experts from around the world, including scientists, development practitioners, parliamentarians,

policymakers, and representatives from civil society, UN agencies, the World Bank, the IMF, and the private sector. *Investing in Development: A Practical Plan to Achieve the Millennium Development Goals* brings together the core recommendations of the UN Millennium Project. By outlining practical strategies and approaches to financing the, the report presents an operational framework that will allow even the poorest countries to achieve the Millennium Development Goals by 2015. *Bild und Kult* - Hans Belting 2000

**Virtual Manufacturing** - Wasim Ahmed Khan 2011-02-16

Virtual Manufacturing presents a novel concept of combining human computer interfaces with virtual reality for discrete and continuous manufacturing systems. The authors address the relevant concepts of manufacturing engineering, virtual reality, and computer science and engineering, before embarking on a description of the methodology for building augmented reality for manufacturing processes and manufacturing systems. Virtual Manufacturing is centered on the description of the development of augmented reality models for a range of processes based on CNC, PLC, SCADA, mechatronics and on embedded systems. Further discussions address the use of augmented reality for developing augmented reality models to control contemporary manufacturing systems and to acquire micro- and macro-level decision parameters for managers to boost profitability of their manufacturing systems. Guiding

readers through the building of their own virtual factory software, Virtual Manufacturing comes with access to online files and software that will enable readers to create a virtual factory, operate it and experiment with it. This is a valuable source of information with a useful toolkit for anyone interested in virtual manufacturing, including advanced undergraduate students, postgraduate students and researchers.

Die Theologie des Kreuzes beim frühen Cyrill von Alexandria - Sebastian Schurig 2005

Sebastian Schurig untersucht anhand des Erstlingswerkes des alexandrinischen Bischofs Cyrill

(375/80- 444), welchen Stellenwert der Kreuzestod Christi für dessen frühe Theologie hat. Hier wird die zentrale Bedeutung erkennbar, die das paulinische Modell der Kenosis Christi im Denken des Alexandriners einnimmt: Gott selbst entäußert sich seiner Gottheit und wird Mensch. Er opfert sich am Kreuz, um die Menschen von Sünde und Tod zu befreien und zu sich zu führen. Von diesem Modell aus ist das gesamte Heilswerk Christi zu verstehen, und von ihm aus formuliert Cyrill zentrale Gedanken seiner Christologie, die er in der späteren Auseinandersetzung mit Nestorius und auf der Synode von Ephesus (431) vehement vertritt.
