Diccionario de Informatica, Telecomunicaciones y Ciencias Afines/Dictionary of Computing, Telecommunications, and Related Sciences - Mario León 2004

Este diccionario que engloba unas 83.000 entradas, casi 10.000 abreviaturas y unas 6.000 definiciones y aclaraciones, es el resultado de la experiencia recopilada durante los últimos 20 años en la traducción técnica especializada en la materia y de la consulta de las principales obras aparecidas recientemente en el mercado sobre estos temas, así como de la explicación y resolución de muchas dudas por ingenieros, expertos y aplicadores de técnicas y sistemas del sector. Está destinado a técnicos, expertos, traductores profesionales, y en general, a toda persona que se relacione con la informática, la electrónica o las telecomunicaciones utilizando ambos idiomas. El diccionario justifica su carácter politécnico porque se han añadido numerosos términos de ramos afines y especializados, como por ejemplo telefonía, electromedicina, telegrafía, sistemas de armas, radiactividad, informática, termoelectricidad, radiodifusión, nucleónica, láser, televisión, electricidad, técnicas de detección, magnetismo, espectrografía, etc.

This collection of essays and reviews represents the most significant and comprehensive writing on Shakespeare's *A Comedy of Errors*. Miola's edited work also features a comprehensive critical history, coupled with a full bibliography and photographs of major productions of the play from around the world. In the collection, there are five previously unpublished essays. The topics covered in these new essays are women in the play, the play's debt to contemporary theater, its critical and performance histories in Germany and Japan, the metrical variety of the play, and the distinctly modern perspective on the play as containing dark and disturbing elements. To compliment these new essays, the collection features significant scholarship and commentary on *The Comedy of Errors* that is published in obscure and difficult accessible journals, newspapers, and other sources. This collection brings together these essays for the first time.

United States Code - United States 2013

"The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited "U.S.C. 2012 ed." As adopted in 1926, the Code established prima facie the general and

permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office"-- Preface.

Object-Oriented Technology. ECOOP 2008 Workshop Reader - Patrick Eugster 2009-05-25

This volume presents the reports from the workshops held in conjunction with the European Conference on Object-Oriented Programming (ECOOP2008), taking place in its 22nd edition at Coral Beach in Paphos, Cyprus, July 7–11 2008. As is customary, the workshops introduced the conference, taking place on the first two days (July 7 and July 8 2008) prior to the main technical track. The workshops were first chosen through a rigorous process with stringent selection criteria, carried out by the members of the Workshop Selection Committee. This volume collects reports from the resulting high-quality workshops. The topics covered span areas related to object-oriented programming and technology, such as programming languages, aspects, parallel computing, formal techniques, software engineering, tools, and applications. By summarizing the outcome of these workshops, this volume provides readers with a comprehensive set of pointers into current trends and issues of intense investigation and debate in the field of object-oriented technology. Following the tradition, the individual workshop reports summarize the workshop goals, before providing an overview of the presentations and sometimes also a summary of the issues and findings of debates fueled by the presentations. Some reports may also include a list of participants or contributed position papers. Several of the reports also contain a list of references to relevant publications and websites, including the workshop home page which usually offers the contributed position papers for download and may present further material.
