The TFT Purple Book: A Guide to Dilapidations in the UK - Jon Rowling 2018-10-18

This important new guide to dilapidations is written by a surveyor for surveyors and will also appeal to anyone else who needs to understand this often-complex subject. The TFT Purple Book shines a light into dilapidations' darker recesses,

identifying the legal context, best practice, the background to how and why dilapidations is dealt with as it is, and addresses areas of legal uncertainty. solid foundation of knowledge. It even considers cattle, children and 'chattels-vegetable' - and not many text books can make that boast. It includes chapters on: the classification of items; repair; reinstatement; the measures of loss; diminution valuations; supersession; engineering services; dispute resolution; interim dilapidations; break options; avoiding and minimising disputes; dilapidations in Northern Ireland; and dilapidations in Scotland. Opinion pieces are also included relating to: diminution valuations; the dilapidations protocol; and the roles of the building surveyor. The book accompanies the TFT Dilapidations Flowcharts and the TFT Two Step Approach to Supersession.

Age-Period-Cohort Analysis - Yang Yang
2016-04-19

This book explores the ways in which statistical models, methods, and research designs can be used to open new possibilities for APC analysis. Within a single, consistent HAPC-GLMM statistical modeling framework, the authors

synthesize APC models and methods for three research designs: age-by-time period tables of population rates or proportions, repeated cross-section sample surveys, and accelerated longitudinal panel studies. They show how the empirical application of the models to various problems leads to many fascinating findings on how outcome variables develop along the age, period, and cohort dimensions.

[The Management of Construction: A Project Lifecycle Approach](#) - F. Lawrence Bennett
2007-06-01

Management of Construction introduces all aspects of management practice to students and professionals based in the construction industry. It is also important for those involved in allied fields such as design, project development, and site monitoring and inspection. The book addresses each stage of the construction project from conception to completion, giving a perspective on the whole life cycle often missing from textbooks. The author also balances

engineering concerns with the human resource and personal aspects of construction management that are so important to the successful outcome of a project.

BIM and Big Data for Construction Cost Management - Weisheng Lu 2018-10-11

This book is designed to help practitioners and students in a wide range of construction project management professions to understand what building information modelling (BIM) and big data could mean for them and how they should prepare to work successfully on BIM-compliant projects and maintain their competencies in this essential and expanding area. In this book, the state-of-the-art information technologies that support high-profile BIM implementation are introduced, and case studies show how BIM has integrated core quantity surveying and cost management responsibilities and how big data can enable informed decision-making for cost control and cost planning. The authors' combined professional and academic experience

demonstrates, with practical examples, the importance of using BIM and particularly the fusion of BIM and big data, to sharpen competitiveness in global and domestic markets. This book is a highly valuable guide for people in a wide range of construction project management and quantity surveying roles. In addition, implications for project management, facilities management, contract administration, and dispute resolution are also explored through the case studies, making this book essential reading for built environment and engineering professionals.

Construction Stakeholder Management - Ezekiel Chinyio 2009-10-22

This book captures best practice in construction stakeholder management using a range of international case studies. It demonstrates stakeholder mapping, presents the power/interest matrix and analyses a model for the timely engagement of stakeholders. The increased use of partnering and other relational

forms of contracting have underlined the need for project participants to work together and also to be aware of all those who can affect or be affected by a project and its associated developments. Stakeholder management enables them to see this wider picture and provides guidance for managing the diverse views and interests that can manifest in the course of a project's life. All construction projects have the potential for conflicts of interest that can result in costly and damaging legal proceedings. This new book advocates an alternative to dispute resolution that is proactive, practical and global in its application. *Construction Stakeholder Management* is therefore an essential text for advanced students, lecturers, researchers and practitioners in the built environment.

Continuing Professional Development - Andrew L. Friedman 2013-03

Continuing Professional Development (CPD) is the means by which the professions across the world ensure that their knowledge and skills

remain up to date and relevant to changing needs and environments. CPD significantly contributes to the quality and reputation of the professions and therefore to the quality of national and international social life and economic well being. Starting with a discussion on what CPD is, the author analyzes how professional bodies govern CPD, what support they provide to individual professionals and how they measure or evaluate what individuals do under the provenance of CPD. *Continuing Professional Development* explains why, up to now, CPD has been a relatively neglected subject in spite of it being carried out by millions. It argues whether a variety of perspectives or visions of CPD has held back wider public appreciation of it and if greater co-ordination by professional bodies, or the introduction of new players to the field, will change this in the future. Providing the first comprehensive study of the subject, this innovative book will be required reading for CPD

professionals and researchers and is a fascinating read for all professionals, especially those involved with human resource development and management / leadership development.

Cost Management of Construction Projects -

Donald Towey 2013-06-12

The cost manager/quantity surveyor plays a pivotal role in the financial and contract management of construction projects, although the exact nature of the service they provide depends on the project employer's terms of engagement. This can mean acting as consultant in a range of roles including cost and advisory services for budget setting to initiate a project, cost management through the design and construction phases, contract administration and acting as the client side project manager to oversee the entire building process. Cost Management of Construction Projects focusses
